Contents

1 Introduction and Historical Background 3
  1.1 Setting the Stage 3
  1.2 Aim and structure of this monograph 7

2 Quantity Discount Realities 9
  2.1 Reasons for quantity discounts 9
  2.2 Characteristics of quantity discounts 12
  2.3 Evidence from industry 23
  2.4 Real-world applications 33

3 For Buyers: How Much to Order 39
  3.1 Standard Assumptions and Basic Notation 40
  3.2 All-units discount schedule in a standard
      EOQ environment 41
  3.3 Incremental discount schedule in a standard
      EOQ environment 43
  3.4 Multiple products and item aggregation over an infinite
      horizon 45
  3.5 All-units discount schedule in a finite horizon (MRP) envi-
      ronment 46
3.6 Incremental discount schedule in a finite horizon (MRP) environment ........................................ 50
3.7 Single-period models ........................................ 54
3.8 Multiple products and item aggregation over a finite horizon ........................................ 56
3.9 Supplier selection with order allocation ........................................ 56
3.10 Price-sensitive demand models ........................................ 66
3.11 One-time discounts (trade promotions) ........................................ 67
3.12 Freight discounts and fixed fees ........................................ 69
3.13 Centralized purchasing with multiple locations ........................................ 71
3.14 Purchasing groups ........................................ 73
3.15 A negotiation tool ........................................ 74
3.16 Summary of the buyer’s perspective literature ........................................ 76

4 For Sellers: What Discounts to Offer ........................................ 79
4.1 Standard assumptions and basic notation ........................................ 80
4.2 Standard lot size coordination models ........................................ 81
4.3 Imperfect information ........................................ 86
4.4 Multiple buyers ........................................ 87
4.5 Multiple products ........................................ 88
4.6 Joint buyer-seller “coordination” perspective ........................................ 88
4.7 Demand stimulation models ........................................ 91
4.8 Perspectives from economics and marketing ........................................ 94
4.9 Novel quantity discount offerings ........................................ 97
4.10 Summary of the seller’s perspective literature ........................................ 98

5 Future Opportunities ........................................ 101

A Appendix: Spreadsheet Applications ........................................ 107
A.1 Total purchasing cost for all-units and incremental discounts ........................................ 108
A.2 EOQ problem with all-units discounts ........................................ 109
A.3 EOQ problem with incremental discounts ........................................ 110
A.4 Newsvendor problem with all-units quantity discounts ........................................ 111
A.5 Coordinated buyer and seller lot sizing ........................................ 112
