RICE UNIVERSITY

ESSAYS IN STRATEGIC COST SHARING

RUBEN JUAREZ

A THESIS SUBMITTED
IN PARTIAL FULFILLMENT OF THE
REQUIREMENTS FOR THE DEGREE

Doctor of Philosophy

HOUSTON TEXAS
April 2008
## Contents

**Introduction**  

1 The worst absolute surplus loss in the problem of commons: random priority vs. average cost  
   1.1 Introduction ................................................. 9  
   1.2 Random Priority and Average Cost  
      1.2.1 The Model ................................................. 13  
      1.2.2 The mechanisms ........................................... 14  
   1.3 The worst absolute loss  
      1.3.1 Main Result .............................................. 19  
   1.4 Asymptotic behavior of $\frac{\text{wal}(n,c,pc)}{\text{wal}(n,c,yp)}$  
      1.4.1 Examples .................................................. 21  
   1.5 Concluding Remarks ......................................... 23  
   1.6 Proofs ....................................................... 24  
   1.7 Appendix: An extension to convex demands ................. 40

2 Group strategyproof cost sharing: the role of indifferences  
   2.1 Introduction .................................................. 43  
   2.2 Related literature ........................................... 46
2.3 The model ................................................................. 48
2.4 Cross-monotonic mechanisms and $MAX$ ......................... 50
2.5 Sequential mechanisms and $MIN$ .................................. 54
2.6 Comparison between cross-monotonic and sequential mechanisms ........................................ 64
  2.6.1 The intersection of cross-monotonic and sequential mechanisms 64
  2.6.2 Equal treatment of equal agents ................................. 64
  2.6.3 Limited number of goods ........................................ 65
2.7 Concluding Remarks .................................................. 66
2.8 Proofs ................................................................. 68

3 Group strategyproof cost sharing: budget-balance vs. budget-surplus 90
  3.1 Introduction ......................................................... 91
  3.2 The model .......................................................... 93
  3.3 GSP and Efficiency ................................................ 94
  3.4 Optimal Mechanisms .............................................. 95
    3.4.1 Decreasing average cost ................................... 95
    3.4.2 Increasing average cost ................................... 97
  3.5 Concluding Remarks .............................................. 99
  3.6 Proofs ............................................................. 100

4 Collusion-proof cost sharing mechanisms in an economy without indifferences 107
  4.1 Introduction ........................................................ 108
  4.2 The model .......................................................... 111
  4.3 $GSP$ mechanisms ................................................. 112
    4.3.1 Sequential Mechanisms .................................... 112
    4.3.2 Cross-monotonic mechanisms ............................... 115
