Part 1: Background 1

1 Economic context 3
   1.1 Why is a valuation needed? 3
   1.2 What types of property value are there? 4
   1.3 Important terms and concepts – value, price, worth, cost and market value 5
   1.4 Supply and demand as determinants of price and value 9
   1.5 Land use principles 11
   1.6 The investment and property markets 15
   1.7 Taxation and its effects 16
   1.8 Influence of Town and Country Planning legislation and policies on property values 17

2 The property valuation profession 23
   2.1 Skills required by and role of the property valuer 23
   2.2 Who may require the services of a valuer? 26
   2.3 Difference between a valuation and a building survey 27
   2.4 The level of accuracy expected of the valuer 29
   2.5 Reflecting uncertainty in valuations for investment purposes 32
   2.6 Independence of the valuer 33
Contents

2.7 The role of the Royal Institution of Chartered Surveyors (RICS) as a regulatory and unifying body for the profession 34
2.8 The Valuer Registration Scheme 34
2.9 The RICS ‘professional groups’ 35
2.10 The RICS information resource: www.isurv.com 35
2.11 International dimensions of the profession 36
2.12 Automated valuation models (AVMs) 37
2.13 Sustainability and property valuation 38

3 Investment 46
3.1 Types of investment 46
3.2 Types of investor 59
3.3 Nominal and real returns on investments 59
3.4 The ‘ideal’ investment 61
3.5 Risk, reward and yields 63
3.6 The reverse yield gap 64
3.7 Real estate as an investment 65
3.8 Investment evaluation and selection 67
3.9 Methods of purchase and sale 72

Part 2: Valuation mathematics 79

4 Compounding and discounting 81
4.1 Simple interest 81
4.2 Compound interest 82
4.3 ‘Traditional’ annually in arrear tables and formulae 84
4.4 Use of calculators and computers 85
4.5 The concepts of compounding and discounting 86
4.6 ‘All risks yields’ (ARYs) and implied risk/growth allowances 86
4.7 Amount of £1 calculations 88
4.8 Present value of £1 calculations 90
4.9 Amount of £1 per annum calculations 91

5 Sinking funds and mortgages 96
5.1 Role and relevance of sinking funds 96
5.2 Calculation of sinking funds 97
5.3 Effects of tax and adjustments made 98
5.4 Sinking funds and leaseholds 100
5.5 Mortgages, loans and their repayment calculations 101

6 Capitalisation 107
6.1 Income flows and capital sums 107
6.2 Years purchase in perpetuity 109
6.3 Single rate years purchase for a number of years 111
6.4 Years purchase of a reversion to perpetuity 113
6.5 Years purchase (single rate) deferred 113
6.6 Remunerative and accumulative rates of interest in leasehold valuations 115
6.7 Years purchase dual rate for a number of years 115
6.8 Dual rate years purchase (tax adjusted) 116
6.9 Deferment of dual rate years purchase 118
6.10 Life tables and years purchases based on them 119

7 Alternative valuation tables and formulae 122
  7.1 Background 122
  7.2 Annually in advance calculations 125
  7.3 Historical development of alternative property valuation tables and impact on current Parry’s Tables 125
  7.4 Income in advance or in arrear and not receivable annually 127
  7.5 Quarterly in advance dual rate tax adjusted years purchases 128
  7.6 Practical effects of using alternative tables and formulae 129

Part 3: Valuation methods 133

8 Methods of measurement 135
  8.1 RICS Property Measurement and International Property Measurement Standards (IPMS) 135
  8.2 Gross External Area (GEA) 140
  8.3 Gross Internal Area (GIA) 141
  8.4 Net Internal Area (NIA) 141
  8.5 Converting from metric to imperial or imperial to metric measurements 141

9 Valuation standards 144
  9.1 International Valuation Standards (IVS) 144
  9.2 RICS Valuation – Professional Standards (the ‘Red Book’) 146
  9.3 RICS Information Papers and Guidance Notes 149
  9.4 Form and content of valuation reports 150

10 Comparison method or market approach 155
  10.1 Basis of method 155
  10.2 Units of comparison and application of the method to the various property types 159
  10.3 Property market evidence and information sources 209
  10.4 Making qualitative and quantitative adjustments to comparable evidence 213
  10.5 Weighting of comparable evidence 218
  10.6 Methods of assessing market rent 220
  10.7 Assessing ground rents 222
  10.8 Indexed rents 224
  10.9 Annual equivalents 225
Contents

11 **Investment method or income approach: traditional**
- 11.1 Basis of method
- 11.2 Valuation layout
- 11.3 Choice of all risks yield
- 11.4 Differences between freehold and leasehold all risks yields
- 11.5 Initial yields
- 11.6 Reversionary yields
- 11.7 Equivalent yields
- 11.8 Equated yields
- 11.9 Analysis of a property yield
- 11.10 Term and reversion valuations using the ‘block income’ approach
- 11.11 From term and reversion with differential yields to equivalent yield approach
- 11.12 ‘Hardcore’ or ‘layer’ approach
- 11.13 Gross versus net of tax calculations and effects of tax on leasehold valuations
- 11.14 Different types of lease repairing and insuring terms, and effects of property outgoings on net rental income

12 **Investment method or income approach: discounted cash flow**
- 12.1 DCF methods
- 12.2 Use of computer spreadsheets and other software
- 12.3 Future property rental and capital growth
- 12.4 Equated yield and implied rental growth formulae
- 12.5 Application of the method to property investments, including holding period and exit yield
- 12.6 DCF method compared with ‘traditional’ property valuation methods
- 12.7 ‘Short-cut’ freehold DCF valuations
- 12.8 Leasehold DCF valuations
- 12.9 Combining the methods in a single valuation appraisal: block income, layer, equivalent yield and equated yield/dcf approaches

13 **Residual method**
- 13.1 Basis of method and when used
- 13.2 Reliability and limitations of method
- 13.3 Simple methods and use of software
- 13.4 Overview of more complex approaches including discounted cash flow, sensitivity analysis, probability and ‘Monte Carlo’ simulation

14 **Profits method**
- 14.1 Valuation of individual trade-related properties
- 14.2 Basis and variations of profits or ‘receipts and expenditure’ method and when used
- 14.3 Reliability and limitations of method
- 14.4 Turnover rents and leases
15 Cost approach
15.1 Cost approach to valuation
15.2 Basis of cost methods and when used
15.3 Age, obsolescence and depreciation
15.4 Format and content of cost approach calculations
15.5 Costs in use
15.6 Valuation of intangible assets

Part 4: Applied valuations

16 Landlord and tenant valuations
16.1 Calculation of a premium on the grant of a lease at a reduced rent
16.2 Capital payment on assignment of a lease
16.3 Lease surrender and renewals
16.4 Premium on variation of a condition of a lease
16.5 Sale and leaseback
16.6 Synergistic or ‘marriage’ valuations
16.7 ‘Divorce’ valuations
16.8 Effect of improvements and restrictive user clauses on valuations
16.9 Equivalent or constant rent
16.10 Rental equivalent on an annual tenancy
16.11 Problems with leasehold valuations, including double sinking fund error theory and relevance of ‘dual rate’ calculations
16.12 ‘Reverse’ premiums
16.13 Lease incentives or inducements
16.14 Effective rent and valuation analysis of lease incentives
16.15 The problem of over-rented property and its valuation

17 Loan and asset valuations
17.1 Loan valuations
17.2 Asset valuations for accounting purposes
