Assessing Relative Valuation in Equity Markets

Bridging Research and Practice
# CONTENTS

1 Introduction 1

2 Relative Valuation: Issues and General Framework 5
   2.1 Relative Valuation Versus Absolute Valuation 5
   2.2 Stock Market Multiples: Theoretical Foundations 8
      2.2.1 Fundamental Derivation of Multiples 9
      2.2.2 Inefficient Capital Market and Multiples 14
   2.3 Multiples Selection and Relevant Value Driver Measures 17
   References 24

3 Literature Background 27
   3.1 General Overview 27
   3.2 Previous Empirical Research Findings 29
      3.2.1 Identification of Comparable Firms 32
      3.2.2 Market Multiples and Value Investing 35
      3.2.3 Combination of Multiples 38
   References 42

4 Accuracy Performance of Relative Valuation 45
   4.1 The Original Dataset 46
   4.2 Methodology 48
      4.2.1 Design of the Empirical Study 48
      4.2.2 Definition of Pricing Errors 57
4.3 Main Findings

4.3.1 Accuracy Performance at Aggregate Level 58
4.3.2 Accuracy Performance Across Multiple Type 66
4.3.3 Accuracy Performance Across Sectors and Industry Groups 70
4.3.4 Accuracy Performance Across Time 84

References 89

5 A Portfolio Approach: Multiples' Accuracy and Stock Selection 91

5.1 Active Portfolio Management: A Premise 92
5.2 Dataset and Methodology 93
  5.2.1 Addressing the Illiquid and Less Frequently Traded Stocks Issue 93
  5.2.2 Stock Selection and Identifying Relevant Screening Factors 94
5.3 Investment Strategies Based on Pricing Errors Factor 95
5.4 Main Findings 98
5.5 Concluding Remarks 106

References 112

6 Conclusion 115
