CONTENTS

1 Finance as a Pattern of Timeless Moments 1
   1.1 Introduction 1

Part 1 Perpetual Possibility in a World of Speculation: Portfolio Theory in Its Modern and Postmodern Incarnations 3

2 Modern Portfolio Theory 5
   2.1 Mathematically Informed Risk Management 5
   2.2 Measures of Risk; the Sharpe Ratio 6
   2.3 Beta 6
   2.4 The Capital Asset Pricing Model 9
   2.5 The Treynor Ratio 10
   2.6 Alpha 12
   2.7 The Efficient Markets Hypothesis 13
   2.8 The Efficient Frontier 15

3 Postmodern Portfolio Theory 27
   3.1 A Renovation Project 27
   3.2 An Orderly Walk 28
   3.3 Roll's Critique 29
   3.4 The Echo of Future Footsteps 31
Part 2  Bifurcating Beta in Financial and Behavioral Space  39

4  Seduced by Symmetry, Smarter by Half  41
   4.1 Splitting the Atom of Systematic Risk  41
   4.2 The Catastrophe of Success  44
   4.3 Reviving Beta’s Dead Hand  45
   4.4 Sinking, Fast and Slow  47

5  The Full Financial Toolkit of Partial Second Moments  59
   5.1 A History of Downside Risk Measures  59
   5.2 Safety First  60
   5.3 Semivariance, Semideviation, and Single-Sided Beta  62
   5.4 Traditional CAPM Specifications of Volatility, Variance,
       Covariance, Correlation, and Beta  64
   5.5 Deriving Semideviation and Semivariance from Upper
       and Lower Partial Moments  67

6  Sortino, Omega, Kappa: The Algebra of
    Financial Asymmetry  79
   6.1 Extracting Downside Risk Measures from Lower Partial
       Moments  79
   6.2 The Sortino Ratio  80
   6.3 Comparing the Treynor, Sharpe, and Sortino Ratios  81
   6.4 Pythagorean Extensions of Second-Moment Measures:
       Triangulating Deviation About a Target
       Not Equal to the Mean  85
   6.5 Further Pythagorean extensions: Triangulating
       Semivariance and Semideviation  87
   6.6 Single-Sided Risk Measures in Popular Financial Reporting  89
   6.7 The Trigonometry of Semideviation  91
   6.8 Omega  94
   6.9 Kappa  95
   6.10 An Overview of Single-Sided Measures of Risk Based on
        Lower Partial Moments  97
   6.11 Noninteger Exponents Versus Ordinary Polynomial
        Representations  99
7 Sinking, Fast and Slow: Relative Volatility Versus Correlation Tightening
   7.1 The Two Behavioral Faces of Single-Sided Beta 107
   7.2 Parameters Indicating Relative Volatility and Correlation Tightening 111
   7.3 Relative Volatility and the Beta Quotient 115
   7.4 The Low-Volatility Anomaly and Bowman's Paradox 116
   7.5 Correlation Tightening 120
   7.6 Correlation Tightening in Emerging Markets 122
   7.7 Isolating and Pricing Correlation Risk 126
   7.8 Low Volatility Revisited 129
   7.9 Low Volatility and Banking's "Curse of Quality" 131
   7.10 Downside Risk, Upside Reward 132

Part 3 Τέσσερα, Τέσσερα: Four Dimensions, Four Moments 153

8 Time-Varying Beta: Autocorrelation and Autoregressive Time Series 155
   8.1 Finding in Motion What Was Lost in Time 155
   8.2 The Conditional Capital Asset Pricing Model 157
   8.3 Conditional Beta 158
   8.4 Conventional Time Series Models 160
   8.5 Asymmetrical Time Series Models 162

9 Asymmetric Volatility and Volatility Spillovers 173
   9.1 The Origins of Asymmetrical Volatility; the Leverage Effect 173
   9.2 Volatility Feedback 174
   9.3 Options Pricing and Implied Volatility 176
   9.4 Asymmetrical Volatility and Volatility Spillover Around the World 177

10 A Four-Moment Capital Asset Pricing Model 189
   10.1 Harbingers of a Four-Moment Capital Asset Pricing Model 189
   10.2 Four-Moment CAPM as a Response to the Fama–French–Carhart Four-Factor Model 190
10.3 From Asymmetric Beta to Coskewness and Cokurtosis 192
10.4 Skewness and Kurtosis 196
10.5 Higher-Moment CAPM as a Taylor Series Expansion 198
10.6 Interpreting Odd Versus Even Moments 202
10.7 Approximating and Truncating the Taylor Series Expansion 204
10.8 Profusion and Confusion Over Measures of Coskewness and Cokurtosis 205
10.9 A Possible Cure for Portfolio Theory's Curse of Dimensionality: Relative Lower Partial Moments 210

11 The Practical Implications of a Spatially Bifurcated Four-Moment Capital Asset Pricing Model 225
11.1 Four-Moment CAPM Versus the Four-Factor Model 225
11.2 Correlation Asymmetry 226
11.3 Emerging Markets 227
11.4 Size, Value, and Momentum 228

Part 4 Managing Kurtosis: Measures of Market Risk in Global Banking Regulation 235

12 Going to Extremes: Leptokurtosis as an Epistemic Threat 237
12.1 VaR and Expected Shortfall in Global Banking Regulation 237
12.2 Leptokurtosis, Fat Tails, and Non-Gaussian Distributions 240

13 Parametric VaR Analysis 247
13.1 The Basel Committee on Bank Supervision and the Basel Accords 247
13.2 The Vulnerability of VaR Analysis to Model Risk 249
13.3 Gaussian VaR 251
13.4 A Simple Worked Example 252
CONTENTS xv

14 Parametric VaR According to Student's t-Distribution 261
14.1 Choosing Among Non-Gaussian Distributions 261
14.2 Stable Paretian Distributions 262
14.3 Student's t-Distribution 264
14.4 The Probability Density and Cumulative Distribution Functions of Student's t-Distribution 266
14.5 Adjusting Student's t-Distribution According to Observed Levels of Kurtosis 268
14.6 Performing Parametric VaR Analysis with Student's t-Distribution 270

15 Comparing Student's t-Distribution with the Logistic Distribution 281
15.1 The Logistic Distribution 281
15.2 Equal Kurtosis, Unequal Variance 284

16 Expected Shortfall as a Response to Model Risk 291
16.1 VaR Versus Expected Shortfall 291
16.2 The Incoherence of VaR 292
16.3 Extrapolating Expected Shortfall from VaR 296
16.4 A Worked Example 298
16.5 Formally Calculating Expected Shortfall from VaR under Student's t-Distribution 299
16.6 Expected Shortfall Under a Logistic Model 302

17.1 Additional Concerns 307
17.2 Stressed VaR 308
17.3 Expected Shortfall and the Elusive Ideal of Elicitability 310
17.4 Systemic Risk 312
17.5 A Dismal Forecast 315

18 Finance as a Romance of Many Moments and Plural Views 327
