Notes on contributors xx
Foreword to first edition xxvii
Preface to first edition xxxi
Preface to second edition xxxii
Preface to third edition xxxiii

PART I
Health, well-being and productivity landscape 1

1 Effects of the built environment on health and well-being 3
DEREK CLEMENTS-CROOME

Introduction 3
Architecture and the multi-sensory experience 5
Do buildings affect people’s health? 7
Well-being 8
Effects of environmental factors on physiological well-being 14
Beyond environmental comfort 23
The Flourish model 26
References 28
Further reading 34

2 The business case for sustainable healthy buildings: health, productivity and economic consequences 41
DEREK CLEMENTS-CROOME

Measurement of productivity 44
Interactive architecture and the environment 48
Well-being and productive environments 49
References 52
3 The multi-sensory experience in buildings
BRIONY TURNER, DEREK CLEMENTS-CROOME AND KAY PALLARIS

Designing a productive workplace 57
The evolution of the productive workplace 57
Making sense of the multi-sensory experience 59
Designing for multi-sensory well-being 61
Designing for quality attention 62
Designing for social interaction and collaboration 63
Designing to nourish the brain to enhance creativity 64
Designing for personal and responsive control 65
The potential of wearable technology for workplace well-being 67
Conclusion: towards a sensory palette for a healthy workplace design 70
References 70

4 Pleasure and joy, and their role in human life
MICHEL CABANAC

The behavioural final common path 73
Sensory pleasure 73
Pleasure and comfort 76
Conflicts of motivations 77
From pleasure and comfort to joy and happiness 78
Optimisation of behaviour 79
Conclusion 81
References 81

5 User-centred workspace design: applications of environmental psychology to space for work
JACQUELINE C. VISCHER

Satisfaction and productivity 84
Concept of workspace comfort 86
Psychological comfort 88
Conclusion and directions for future research 89
References 91

6 Change makers: rethinking the productive workplace through an art and design lens
JEREMY MYERS

Introduction 95
Influencing behaviour 96
Enhancing experience 99
Exploring sensation 102
Affecting well-being 103
Conclusion 107
References 107
PART II
Research evidence

7 Lessons from schools for productive office environments: the SIN model
PETER BARRETT

- Challenges and value of establishing real-world impacts of work environments 111
- The performance metrics problem 112
- Complexity in the design factors 112
- A new perspective: SIN 113
- SIN applied to schools and learning 115
- Implications for offices 119
- Future opportunities 121
- References 122

8 Effects of indoor air quality on decision-making
USHA SATISH, PIERS MACNAUGHTON AND JOSEPH ALLEN

- Productivity 125
- Indoor air quality (IAQ) 125
- The literature 126
- Strategic Management Simulations (SMS) 128
- IAQ research with an SMS tool 129
- Implications 130
- References 133

9 Workplace productivity: fatigue and satisfaction
SHIN-ICHI TANABE AND NAOE NISHIHARA

- Introduction 135
- Conceptual diagram for the effect of thermal environment on productivity 135
- The call center study 136
- Does performance decrease upon short-term exposure to a moderately hot environment? 138
- Effect of high temperature on cerebral blood flow 139
- Does short-term exposure to a moderately hot environment affect cerebral blood flow? 141
- Does improving thermal satisfaction have a positive effect on performance? 142
- Conclusion 146
- References 147

10 Proving the productivity benefits of well-designed offices
NIGEL OSELAND

- Defining productivity 148
- Measuring productivity 150
- Evidence for productivity 153
- Quantifying productivity benefits 156
Designing for productivity 157
References 158

11 Optimising well-being and productivity through an ergonomics-based approach 160
STEPHEN BOWDEN
Ergonomics 160
Hidden costs and the human factor 161
Human-centred design and ergonomics 163
Health and well-being defined 166
Distractions, well-being, presenteeism and ill health 169
Economic analysis 170
Conclusion 171
References 171

12 Lighting for productive workplaces 173
JENNIFER A. VEITCH
Introduction 173
Eye and brain: sensation 175
Seeing and interpreting: perception, cognition, and emotion 177
Activation and alertness 182
Integrated lighting recommendations 185
Note 186
References 187

13 The Robert L. Preger Intelligent Workplace™: the Living Laboratory at Carnegie Mellon University 192
VOLKER HARTKOPF, VIVIAN LOFTNESS, AZIZAN AZIZ, KHEE POH LAM,
STEVE LEE, ERICA COCHRAN AND BERTRAND LASTERNAS
Introduction 192
Challenges 192
The Robert L. Preger Intelligent Workplace: The Living and Lived-In Laboratory 192
Systems integration for performance 195
Design approaches to absorb change and avoid obsolescence: Flexible Grid – Flexible Density – Flexible Closure systems 195
Eliminate or reduce waste in design, construction and operation 196
Design ascending then cascading energy systems 197
A living laboratory for building science research and education 202
Conclusion 219
References 219
14 Thermal and IAQ effects on school and office work  
PAWEL WARGOCKI AND DAVID P. WYON

Thermal effects 222
Indoor air quality (IAQ) effects 228
Self-estimated performance 235
References 235

15 Measuring the IEQ contribution to productivity and well-being: the importance of the built environment indoor environment quality on economic productivity and the contributing factors which lead to improved performance  
VYT GARNYS, TRAVIS HALE AND ADAM GARNYS

Introduction 241
Potential 242
How can we achieve this potential? 248
Benefits of investment in the improvement of the built environment 254
Next steps 255
References 257

PART III
Experiential evidence from surveys and building case studies 259

16 A visual language of the workplace: new planning principles for modularized work  
PETER A. BACEVICE, HANNAH BEVERIDGE AND LIZ BUROW

Introduction 261
The modularization of work 262
Changing work patterns 263
Adapting the workplace 265
Implications 270
References 271

17 The people-building interface: it's a two-way street  
JUDITH HEERWAGEN, KEVIN KAMPSCHROER, BRYAN C. STEVERSON AND BRIAN GILLIGAN

Buildings can have medicinal effects 273
Building inhabitants are not passive recipients of design 276
Open workspace design has consistent benefits, but may require organizational intervention for benefits to be realized 278
Workplace acoustics and human-generated noise 280
How can we optimize the interface between people and buildings? 281
References 284
18 Workplace: a tool for investment
KEVIN READER

Introduction 286
Why is the workplace changing? 286
Economic and social pressures on the workplace 287
The workplace as a tool for investment 288
More than just a property project 289
Case studies 290
Case study 18.1 Arcadis House London (previously EC Harris) 290
Case Study 18.2 Adur District Council and Worthing Borough Council 293
Case Study 18.3 Walsall Council 295
Conclusion 299
Acknowledgements 300

19 Productivity in buildings: the killer variables: twenty years on
ADRIAN LEAMAN AND BILL BORDASS

Introduction 301
What have we learned? 301
The killer variables – twenty years ago 308
The killer variables – ten years ago 310
Buildings that work well 311
What has changed since the 1980s? 313
Why aren’t we doing better? 314
Notes 315
References 315

20 Enjoy Work: a case study on Chiswick Park
JASON MARGRAVE, RON GERMAN AND KAY CHASTON

Introduction 317
Question: how to get people to Chiswick? 317
Enjoy Work 318
Part of the wider community 323
100 per cent retention for the first 10 years 324

21 The need for a wellness integrator to ensure healthy buildings and businesses
VICTORIA LOCKHART, MALLORY TAUB AND ANN MARIE AGUILAR

Introduction 325
The role of CRE in health and well-being 327
What are metrics for measurement and management? 329
What is the value to business? 330
References 334

22 Achieving holistic sustainability: considering wellness alongside resource use in buildings 335
JENN MCArTHUR

Introduction 335
Wellness and sustainability in the built environment 335
Defining wellness in the workplace 337
The building wellness movement 338
Wellness and the triple bottom line 338
Impact of wellness enablers on sustainability 338
Framework for improving sustainability and wellness in existing buildings 345
The way forward 345
References 346

23 Making the economic case for good design of workplaces 349
SARAH DALY

Introduction 349
History and context 349
Which factors create a healthy and productive workplace? 353
Simplified metrics to quantify paybacks from a proposed green building 356
Conclusion 360
Appendix 362
References 366
Further reading 367

24 Building performance: the value management approach 368
BERNARD WILLIAMS

Introduction 368
Building performance and the premises policy 368
Value management of the premises policy 373
Measuring functional performance 380
Case study 24.1 Selecting the right building 381
Case study 24.2 Functional performance and business growth 383
Case study 24.3 Effects of building quality on educational achievement 384
Measuring the physical and financial performance of buildings 385
Holistic processes of measuring whole-life cost and sustainability 389
Conclusion 391
References 391
PART IV
Future horizons 393

25 Stranger than we can imagine: the future of work and place in the twenty-first century 395
MARK ELTRINGHAM

Introduction 395
Challenges 396
References 399

26 How to prevent today's ergonomic office problems in the future? 400
VEERLE HERMANS

The classic office workstation and environment 400
Today's offices 401
Environmental problems 402
Fancy furniture 402
Mental and psychosocial issues 404
Bad ergonomics, but also bad economics 404
Conclusion 404
References 405

27 Future landscapes 407
DESPINA KATSIKAKIS

Flexibility, choice and engagement 407
AI, talent, knowledge and community 410
Culture, purpose and well-being 413
