Computer Application in Bio-Process Engineering in Japan
Emerging Directions in Computer Applications to Biotechnology: Upgrading the Information Content of Biological Data
Modelling of the in vivo Kinetics of Folding and Aggregation of a Recombinant Protein
Improving the Estimation of Parameters of Penicillin Fermentation Models
Sensitivity Analysis of Floc-Based Nutrient Removal
Dynamic Wiener-MLP with Feedback NOE-Model for Tricoderma Fermentation
Modeling and Simulation of Gas-Liquid-Liquid Extractive Cultivation Processes - Biodegradation of Xenobiotics
Optimal Fed-Batch Culture for Penicillin G Production via a Hybrid Neural Model and a Real-Coded Genetic Algorithm
Optimal Feeding Profile for Xanthan Gum Production Under N-Limited Conditions
A Fast Genetic Optimization for Batch Fermentation Processes
The Modelling of Noise Processes in Stochastic Differential Equations: Application to Biotechnological Processes
Model Discrimination and Parameter Identification by an Experimental Design Strategy
A Hybrid Method for Parameter Estimation Concerning the Dynamic Modelling of Catabolic Pathways in Escherichia coli
Design of Canonical Model Describing Complex Nonlinear Dynamics
Multivariate Process Modelling Applied to Lysine Production
Modelling of Biological Kinetics Using a New Structural Criterion
Modelling of Rice [alpha]-Amylase Production Process in a Recombinant Yeast Taking Account of the Cell Cycle Population
Acetate Formation and Dissolved Oxygen Responses to Feed Transients in Escherichia coli Fermentations: Modeling and Experiments
Physiological Phase Models for Bioprocesses
Simulation of Ethylene Production by Recombinant Cyanobacteria
The Importance of Differential Sensitivity Analysis in the Modelling, Optimisation, and Control of Fermentation Processes
Feedback Linearizing Controllers for Optimal Parameter Estimation of Haldane Kinetics
Monitoring and Control of Fermentation Processes: Industrial Requirements
Computer Aided Design of Large Scale Integrated Bioprocess
Simulation and Optimal Control for the Koji Making Process Using Genetic Algorithm
Development of a Model Control System for Antibiotics Fermentation
Optimal Computer Control of Erythromycin Fermentation Processes
Production of 5-Aminolevulinic Acid by Heterotrophic Cultures of Chlorella regularis YA-1 and the Mutant YA-603 Strains
One-Step-Ahead Product Predictor for Profit Optimization of Penicillin Fermentation
A Metabolic Model for On-Line Estimation of Poly-[beta]-Hydroxybutyrate (PHE) Production p. 343
Metabolism in Pyruvate Fermentation Under Various Aeration Conditions p. 349
Metabolic Flux Analysis of Microaerobic Lysine Fermentations p. 355
Metabolic Fluxes in Corynebacterium glutamicum - Identification of Metabolic Patterns by [superscript 13]C Isotope Analysis p. 363
Studies of L-Glutamate-Production in Coryneform Bacteria by Using Metabolic-Flux Analysis p. 369
Feeding Strategy of Required Components by Metabolic Engineering Approach in a Lysine Production Process p. 375
On-Line Monitoring and Optimal Adaptive Control of the Fed-Batch Baker's Yeast Fermentation p. 381
Comparison of Methods for Dealing with Uneven Length Batches p. 387
Optimized Data Exploration of Recombinant Fermentations Using Neural Network Simulations p. 393
Multivariate Statistical Monitoring Procedures for Fermentation Supervision: An Industrial Case Study p. 399
Database Mining Tools for Bioprocess Analysis p. 405
Mid-Infrared Spectroscopic Determination of Sugar Contents in Culture Media p. 411
Monitoring of Solid Fermentation Process by Computer-Analysis of Near Infrared Spectral Data p. 417
Monitoring Constituent Concentrations in Bioreactions with Attenuated Total Reflection Fourier Transform Infrared Spectroscopy p. 423
Chemometric Models for the On-Line Estimation of Bioprocess Variables from 2-D-Fluorescence Spectra p. 427
Monitoring and Control of a Bacteria Fuel Cell Process by Color Analysis p. 433
Quantification of Data Clusters for Bioprocess Performance Classification via Artificial Neural Networks p. 439
Computerized Modeling and Supervision of Fermentation Processes p. 445
Energy Metabolism and Antibody Production Based on Flux Analysis in Hybridoma Cultivation p. 451
Modeling of Multiple Steady States in Mammalian Cells. A Cybernetic Approach p. 455
Cell Therapy by Using Genetic Engineered Glomerular Cells to Remove Immune Complex Deposited on Kidney p. 461
Diagnosis of Aphasia from Electroencephalogram Using Neural Network p. 467
Automated Culture of Human Keratinocytes in Bioreactor with Image Analysis for Production of Autologous Skin Grafts p. 473
Mathematical Model of Light-Enhanced CHS Promoter Expression in BY-2 p. 479
Quantifying the Kinetics of Somatic Embryo Development p. 485
Enhancement of Monoclonal Antibody Production Under High Osmotic Pressure p. 491
Process Simulation of Desulfurization from Pyrite by Thiobacillus ferrooxidans in a Packed-Bed Medium-Recirculating Bioreactor under Different Recirculation Rates p. 497
Detection of Pollution by Toxics in Wastewater Treatment Plants p. 503
Effect of Fuzzy Control on Influent Variations in a Pilot-Scale Activated Sludge Process  p. 509
Stochastic Control for a Large-Scale Wastewater Treatment System  p. 515
Kinetic Model of an UASB Reactor Treating Low-Strength Wastewater  p. 523
Equilibrium Model for an Anaerobic Fixed-Film Reactor  p. 529
Limitations of Short-Term Experiments Designed for Identification of Activated Sludge Biodegradation Models by Fast Dynamic Phenomena  p. 535
Optimal Design and Control of Cyclically Operated Biological Wastewater Treatment Plants  p. 541
Adaptive Linearizing Control of a Denitrifying Biofilter  p. 547
Reduction of Lake Water Eutrophication Caused by Nitrogen and Phosphorous from Paddy Nearby Field Using a Circular Irrigation System  p. 553
Author Index  p. 561
