The Role of Bone Marrow-Derived Cells in Tumor Angiogenesis and Metastatic Progression

The Angiogenic Switch

Origin of Angiogenic Endothelial Cells

Bone-Marrow-Derived Cells: Endothelial and Hematopoietic Progenitor Cells

Bone Marrow-Cell Mobilization in Response to Tumor Factors

Contribution of BMDCs in Tumor Angiogenesis

EPCs and HPCs are Required for Tumor Angiogenesis

Cooperation between BM-Derived Hematopoietic and Endothelial Precursors

VEGFR1[superscript +] HPCs Define the Premetastatic Niche

Stromal Cells: Carcinoma-Associated Fibroblasts (CAFs)

Activation of the SDF-1-CXCR4 Pathway in Mobilization of Proangiogenic Cells

Future Directions
