

Preface

Introduction and History

Histone Modifications

Genomic imprinting in mammals - memories of generations past

Polycomb and trithorax factors in transcriptional and epigenetic regulation

Priscilla

Chromatin dynamics and genome organization in development and disease

ncRNA function in chromatin organization

Epigenetic Gene Regulation and Stem Cell Function

Epigenetic Inheritance

Transgenerational epigenetic regulation by environmental factors in human diseases

Identification of intergenic long non-coding RNA by deep sequencing

Regulation of erythroid cell differentiation by transcription factors, chromatin structure alterations, and noncoding RNA

Genetically altered cancer epigenome

Long non-coding RNAs and carcinogenesis

Epigenetics of physiological and premature aging

Epigenetic Effects of Environment and Diet

Epigenetic control of stress-induced apoptosis

Structure, Regulation, and Function of TET Family Proteins

Epigenetic drugs for cancer therapy

Epigenetic Mechanisms as Key Regulators in Disease. Clinical Implications and Case Studies
