An introduction to neurons, brains and biological psychology

Introduction

What is biological psychology?

Ancient historical beginnings

Rene Descartes

The discovery of 'animal' electricity

The discovery of the nerve cell

The discovery of chemical transmission

Neuronal conduction

How does the neuron maintain its resting potential?

The action potential

The ionic basis of the action potential

Neurotransmitter release

Chemical events in the postsynaptic cell

Glial cells

An introduction to the structure of the nervous system

The endocrine system

The central nervous system

The spinal cord

The brainstem

The midbrain

The forebrain

Thalamus and hypothalamus

The basal ganglia and limbic system

The cerebral cortex

Monoamine pathways in the brain

Summary

Essay questions

Further reading

The visual system

Introduction

What is light?

The structure of the eye

The structure of the retina

The visual pathways to the brain
