

Introduction: What is molecular population genetics?	p. 1
On the origins of molecular population genetics	p. 1
What is the use of molecular population genetics?	p. 8
Further reading	p. 10
The origins of molecular diversity	p. 11
Kinds of mutations	p. 11
Single nucleotide mutation	p. 11
Simple insertions and deletions	p. 18
Tandem repeat mutations	p. 18
Transposable elements	p. 20
Duplications and large-scale mutations	p. 21
Fitness effects of new mutations	p. 22
Deleterious mutations	p. 22
Neutral and nearly neutral mutations	p. 25
Advantageous mutations	p. 26
Magnitude and distribution of effects	p. 26
Models of mutation	p. 27
Recurrent mutation model	p. 28
Infinite alleles model	p. 29
Infinite sites model	p. 29
Finite sites models	p. 29
Stepwise mutation model	p. 30
Birth-death model of gene duplication	p. 30
Biological complexities in mutation	p. 31
Further reading	p. 32
Quantifying genetic variation at the molecular level	p. 34
Heterozygosity	p. 36
Allozyme variation	p. 42
DNA sequence variation	p. 43
Nucleotide polymorphism and diversity: ζ_{w} and ζ_{ζ}	p. 44
The site frequency spectrum	p. 50
Simple sequence repeat variation	p. 52
Other measures of molecular diversity	p. 52
Genetic variation among multiple populations	p. 54
Quantifying population genetic structure with F_{ST}	p. 54
Migration models and effects on population subdivision	p. 59
Further reading	p. 65
Neutral theories of molecular evolution	p. 67
The standard neutral model	p. 67
Neutral divergence and the molecular clock	p. 69
Neutral predictions for polymorphism	p. 74

Nearly Neutral Theory	p. 78
More complex models of selective neutrality	p. 81
Misconceptions about Neutral Theory	p. 82
Further reading	p. 83
Genealogy in evolution	p. 85
Gene trees forward-in-time within species	p. 85
Gene trees in reverse-time coalescence within species	p. 88
Gene trees, species trees, and phylogeny among species	p. 94
Substitution rates in divergence	p. 98
Multiple hits in sequence divergence	p. 104
Phylogeny: topology, discordance, and molecular clocks	p. 107
Effects of recombination and hybridization on genealogies	p. 110
Further reading	p. 112
Recombination and linkage disequilibrium in evolutionary signatures	p. 113
Linkage disequilibrium: what is it?	p. 115
The causes of linkage disequilibrium	p. 116
Measuring linkage disequilibrium	p. 119
Gene conversion: non-crossover recombination	p. 126
Further reading	p. 128
Natural selection and demography as causes of molecular non-randomness	p. 129
Natural selection	p. 129
Positive selection	p. 130
Balancing selection	p. 136
Purifying selection	p. 138
Connecting notions of selection at phenotypic and molecular levels	p. 142
Population size changes	p. 143
Population expansions	p. 144
Population contractions and bottlenecks	p. 145
Population structure and migration	p. 146
Population structure and genealogies	p. 148
Local adaptation in subpopulations	p. 153
Genomic compartments of chromosomal linkage	p. 153
Further reading	p. 158
Molecular deviants: Sequence signatures of selection and demography	p. 159
Skewed patterns of polymorphism	p. 159
Too little or too much polymorphism	p. 161
Skewed site frequency spectra	p. 164
Sequence divergence and differentiation	p. 170
K_A/K_S ratios	p. 171
Population differentiation and F_{ST} outliers	p. 175
Characterizing population structure and admixture	p. 180

Polymorphism and divergence	p. 181
The HKA test	p. 182
The MK test	p. 184
Extensions to the "MK framework"	p. 189
Connecting quantitative genetics and molecular population genetics	p. 191
Further reading	p. 192
Case studies in molecular population genetics: Genotype to phenotype to selection	p. 195
Coat color adaptation in mice	p. 195
Flight ability in butterflies	p. 200
Insecticide resistance in <i>Drosophila</i>	p. 202
Body armor in stickleback fish	p. 205
Alcohol tolerance in <i>Drosophila</i>	p. 209
Advanced issues in molecular evolutionary signatures	p. 212
Further reading	p. 214
Glossary of units, metrics, acronyms, and abbreviations	p. 217
Glossary of terms and jargon	p. 223
Index	p. 243
