

Introduction to the Kidney
Physiology of Body Fluids
Objectives
Physicochemical Properties of Electrolyte Solutions
Molarity and Equivalence
Osmosis and Osmotic Pressure
Osmolarity and Osmolality
Tonicity
Oncotic Pressure
Specific Gravity
Volumes of Body Fluid Compartments
Composition of Body Fluid Compartments
Fluid Exchange Between Body Fluid Compartments
Capillary Fluid Exchange
Cellular Fluid Exchange
Summary
Key Words and Concepts
Self-Study Problems
Structure and Function of the Kidneys
Objectives
Structure of the Kidneys
Gross Anatomy
Ultrastructure of the Nephron
Ultrastructure of the Glomerulus
Ultrastructure of the Juxtaglomerular Apparatus
Innervation of the Kidneys
Summary
Key Words and Concepts
Self-Study Problems
Glomerular Filtration and Renal Blood Flow
Objectives
Renal Clearance
Glomerular Filtration Rate
Glomerular Filtration
Determinants of Ultrafiltrate Composition
Dynamics of Ultrafiltration
Renal Blood Flow
Regulation of Renal Blood Flow and Glomerular Filtration Rate
Sympathetic Nerves
Angiotensin II
Prostaglandins

Nitric Oxide

Endothelin

Bradykinin

Adenosine

Natriuretic Peptides

ATP

Glucocorticoids

Histamine

Dopamine

Summary

Key Words and Concepts

Self-Study Problems

Renal Transport Mechanisms: NaCl and Water Reabsorption Along the Nephron

Objectives

General Principles of Membrane Transport

General Principles of Transepithelial Solute and Water Transport

NaCl, Solute, and Water Reabsorption Along the Nephron

Proximal Tubule

Henle's Loop

Distal Tubule and Collecting Duct

Regulation of NaCl and Water Reabsorption

Summary

Key Words and Concepts

Self-Study Problems

Regulation of Body Fluid Osmolality: Regulation of Water Balance

Objectives

Antidiuretic Hormone

Osmotic Control of AVP Secretion

Hemodynamic Control of AVP Secretion

AVP Actions on the Kidneys

Thirst

Renal Mechanisms for Dilution and Concentration of the Urine

The Role of Urea

Vasa Recta Function

Assessment of Renal Diluting and Concentrating Ability

Summary

Key Words and Concepts

Self-Study Problems

Regulation of Extracellular Fluid Volume and NaCl Balance

Objectives

Concept of Effective Circulating Volume

Volume-Sensing Systems

Volume Sensors in the Low-Pressure Cardiopulmonary Circuit

Volume Sensors in the High-Pressure Arterial Circuit

Hepatic Sensors

Central Nervous System Na⁺ Sensors

Volume Sensor Signals

Renal Sympathetic Nerves

Renin-Angiotensin-Aldosterone System

Natriuretic Peptides

AVP

Control of Renal NaCl Excretion During Euvolemia

Mechanisms for Maintaining Constant Na⁺ Delivery to the Distal Tubule

Regulation of Distal Tubule and Collecting Duct Na⁺ Reabsorption

Control of Na⁺ Excretion with Volume Expansion

Control of Na⁺ Excretion with Volume Contraction

Edema

Alterations in Starling Forces

The Role of the Kidneys

Summary

Key Words and Concepts

Self-Study Problems

Regulation of Potassium Balance

Objectives

Overview of K⁺ Homeostasis

Regulation of Plasma [K⁺]

Epinephrine

Insulin

Aldosterone

Alterations of Plasma [K⁺]

Acid-Base Balance

Plasma Osmolality

Cell Lysis

Exercise

K⁺ Excretion by the Kidneys

Cellular Mechanisms of K⁺ Transport by Principal Cells and Intercalated Cells in the Distal Tubule and Collecting Duct

Regulation of K⁺ Secretion by the Distal Tubule and Collecting Duct

Plasma [K⁺]

Aldosterone

Arginine vasopressin (AVP)

Factors that Perturb K⁺ Excretion

Flow of Tubular Fluid

Acid-Base Balance

Glucocorticoids

Summary

Key Words and Concepts

Self-Study Problems

Regulation of Acid-Base Balance

Objectives

The HCO_3^- Buffer System

Overview of Acid-Base Balance

Renal Net Acid Excretion

HCO_3^- Reabsorption Along the Nephron

Regulation of H^+ Secretion

Formation of New HCO_3^-

Response to Acid-Base Disorders

Extracellular and Intracellular Buffers

Respiratory Compensation

Renal Compensation

Simple Acid-Base Disorders

Metabolic Acidosis

Metabolic Alkalosis

Respiratory Acidosis

Respiratory Alkalosis

Analysis of Acid-Base Disorders

Summary

Key Words and Concepts

Self-Study Problems

Regulation of Calcium and Phosphate Homeostasis

Objectives

Calcium

Overview of Ca^{++} Homeostasis

Ca^{++} Transport along the Nephron

Regulation of Urinary Ca^{++} Excretion

Calcium-Sensing Receptor

Phosphate

Overview of P_i Homeostasis

P_i Transport along the Nephron

Regulation of Urinary P_i Excretion

Integrative Review of Parathyroid Hormone, Calcitriol, and Calcitonin on Ca^{++} and P_i Homeostasis

Summary

Key Words and Concepts

Self-Study Problems

Physiology of Diuretic Action

Objectives

General Principles of Diuretic Action

Sites of Action of Diuretics

Response of Other Nephron Segments

Adequate Delivery of Diuretics to Their Site of Action

Volume of the Extracellular Fluid

Diuretic Braking Phenomenon

Mechanisms of Action of Diuretics

Osmotic Diuretics

Carbonic Anhydrase Inhibitors

Loop Diuretics

Thiazide Diuretics

K⁺-Sparing Diuretics

Osmotic Diuretics

Effect of Diuretics on the Excretion of Water and Other Solutes

Solute-Free Water

K⁺ Excretion

HCO₃⁻ Excretion

Ca⁺⁺ and Pi Excretion

Summary

Key Words and Concepts

Self-Study Problems

Additional Reading

Integrative Case Studies

Normal Laboratory Values

Nephron Function

Answers to Self-Study Problems

Answers to Integrative Case Studies

Review Examination
