|---------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Foreword                                                                                                                                    | p. ix  |
| List of contributors                                                                                                                        | p. xi  |
| The psychobiology of substance use behaviours and its relationship to personal and social psychological interpretations of these behaviours | p. 1   |
| Psychobiological aspects of cocaine dependence: implications for prevention, treatment, and the consequences of use                         | p. 21  |
| The neurobiological implications of early onset excessive alcohol use: potential consequences for psychological functioning                 | p. 56  |
| Zebrafish models of drug addiction                                                                                                          | p. 75  |
| The neurobiological mechanisms underpinning MDMA and impaired psychological functioning: a review of studies with human participants        | p. 92  |
| Methamphetamine use disorder: structural and functional implications as shown by brain imaging studies                                      | p. 105 |
| Synthetic cannabinoids (SCs): current knowledge, psychobiology and clinical applications                                                    | p. 125 |
| Feelings of wellbeing: the contributions of alcohol and tobacco in employed workers and students                                            | p. 157 |
| The psychobiological implications of ketamine misuse                                                                                        | p. 177 |
| Is there evidence of a genetic basis for substance use disorders?                                                                           | p. 196 |
| Psychobiological, medical, and psychiatric implications of new/novel psychoactive substance (NPS) use                                       | p. 213 |
| 'Ecstasy' (MDMA) and visuospatial processing: a follow-up systematic review                                                                 | p. 234 |
| The psychobiology of nicotine vaping: impact on addiction, cognition, mood, anxiety and appetite                                            | p. 265 |
| Index                                                                                                                                       | p. 289 |
