

Table of Contents

Preface

Editorial

The way of IT research: Review of research assumptions and directions	p. 3
DISSWAM: a frame work for Delft intelligent supporting system in water management	p. 23
Evolutionary techniques and their application to engineering design	p. 33
Assessing the impact of new technologies on design practice through an examination of metaphor	p. 43
A taxonomy of concepts in architecture: A new tool for analysis and synthesis in architectural design processes according to domain theory	p. 53
On the representation of dynamic aspects of architectural design in machine environment	p. 65
Une architecture de systeme a bases de connaissances fondee sur l'abduction, la deduction et l'induction	p. 77
Le maintien de la coherence d'un modele evolutif dans un contexte de robots mobiles autonomes: Le systeme PROVE	p. 91
La detection centralisee des fuites sur les reseaux d'eau potable par reseaux de neurones	p. 101
Interface texte-image de synthese pour un environnement de conception informatise: Une application experimentale	p. 113
Component-based modular building design using artificial intelligence techniques	p. 125
Integrated construction project document management (ICPDM)	p. 135
A Building model to schedule and simulate the house refurbishment process	p. 147
Planning urban open spaces by expert systems	p. 155
Applications integrees autour d'une base de connaissances sur le sol	p. 165
Experiences with the construction of a building assembly robot	p. 175
A CAD-IS for the three-dimensional modelling of road design	p. 197
A communication framework for co-operative building design	p. 203
A model-driven configuration: From procedural to object-based decomposition	p. 211
An architecture for co-operative agents and applications in design	p. 221
An object based traffic control strategy: A chaos theory approach with an object-oriented implementation	p. 231
ARMILLA4 - An integrated building model based on visualization	p. 243
A shape-grammar for courtyard houses	p. 251
A shape-grammar for underground stations	p. 259
A visual database for on-line access to bridge precedence	p. 267
Building flexibility and costs in the design process: A design decision support model	p. 273
Cognitive paradigms for design: Knowledge, will, feeling and skill	p. 279
Computationally assisted design formulation	p. 285
Computerized support of management decision making by non-profit housing organizations	p. 295
Computer visualisation for planning control: Objectivity, realism and negotiated outcomes	p. 303

Testing coherence and feasibility of projects in a building C.A.D. system	p. 309
Co-operative agents in engineering environments	p. 319
Cost information in succeeding stages of the design process	p. 327
Designing vertical circulation systems in high-rise buildings: An expert system	p. 335
Employing advanced communications and computing technology to benefit from changing freight transportation policies	p. 341
Fuzzy control of robots	p. 349
Information models of building design	p. 355
Integration of 3-D product model and 3-D co-ordinate measurement technique in construction industry	p. 365
Intelligent computer integrated structures: A new generation of structures	p. 371
Knowledge representation for explanations in knowledge base	p. 379
Object-oriented environments for design	p. 389
On simulation, image analysis and structural modelling of steel fibre concrete	p. 399
Perception theory and imaging systems	p. 405
Preliminary notes on abstraction	p. 411
Targeting novices and experts	p. 419
Towards reverse engineering: Reconstruction of objects using deformable models	p. 425
Typology versus change: Studies in the generation of apartments types in housing production	p. 435
Video-realistic methods for interior light design	p. 443
Towards a multi-agent approach for co-operative distributed design assistants	p. 451
Subject index	p. 461
Name index	p. 465
