List of Illustrations p. xiii
Acknowledgments p. xix
Foreword p. xxi
Historical Introduction p. 1
The Experience of Migraine
Introduction p. 11
Common Migraine p. 13
Introductory Comments
Headache
Nausea and Associated Symptoms
Facial Appearance
Ocular Symptoms
Nasal Symptoms
Abdominal Symptoms and Abnormal Bowel-Action
Lethargy and Drowsiness
Dizziness, Vertigo, Faintness and Syncope
Alterations of Fluid Balance
Fever
Minor Symptoms and Signs: Pupillary Abnormalities, Horner's Syndrome, Bradycardia, Multiple Ecchymoses, Whitening of Hair, etc.
Organic Irritability and Photophobia
Mood-Changes
Symptom-Constellations in Common Migraine
The Sequence of a Common Migraine: Prodromal Symptoms, Modes of Resolution, Post-Migrainous Rebound
Concluding Comments
Postscript (1992)
Migraine Equivalents p. 34
Introductory Comments
Cyclic Vomiting and Bilious Attacks
Abdominal Migraine
Periodic Diarrhoea
Periodic Fever
Precordial Migraine
Periodic Sleep and Trance-States
Periodic Mood-Changes
Menstrual Syndromes
Alternations and Transformations of Migraine
Borderlands of Migraine: Vagal Attacks, Faints, Reactions to Heat, Exhaustion, Passive Motion, Alcohol, etc.

Alternations and Concomitances with other Disorders: Asthma, Angina, Laryngospasm, Sleep-Disorders, Peptic Ulcer, Ulcerative Colitis, Crohn's Disease, Psoriasis, etc.

Differential Diagnosis of Migraine Equivalents

Concluding Comments

Migraine Aura and Classical Migraine

Introductory Comments: Historical Descriptions of Migraine Aura

Specific Visual Hallucinations: Phosphenes and Elementary Hallucinations, Varieties of Migraine Spectra, Characteristics of Scintillating and Negative Scotomata

Specific Tactile Hallucinations: Paraesthesiae, Anaesthesia

Other Sensory Hallucinations: Auditory, Olfactory, Taste, Epigastric, Motor, Vertiginous, etc.

Pseudo-objectivity of Migraine Hallucinations

General Alterations of Sensory Threshold

Alterations of Consciousness and Postural Tone

Specific Motor Disorders: Weakness, Paralyses, Spasms, Seizures

Alterations of Affect and Mood

Disorders of Higher Integrative Functions: Complex Visual Distortions (Micropsia and Macropsia, Mosaic and Cinematographic Vision, Metamorphopsias, Visual Agnosias, etc.)

Complex Apraxias, Agnosias, and Distortions of Body-Image

Aphasias

Time-Distortions, Deja Vu, and Forced Reminiscence

Dreamy States

Migrainous Deliria and Psychoses

Illustrative Case-Histories

Comments on the General Structure of Migraine Aura: Its Differential Diagnosis and Distinction from Epilepsies

Classical Migraine

Postscript (1992): The Angst of Scotoma

Migrainous Neuralgia ("Cluster Headache")--Hemiplegic p. 99

Migraine--Ophthalmoplegic Migraine--Pseudo-Migraine

Migrainous Neuralgia: Synonyms, Typical Features, Illustrative Case-Histories

Hemiplegic and Facioplegic Migraine: Typical Features, Possible Mechanisms of Attack, Case-Histories

Ophthalmoplegic Migraine

Pseudo-Migraine: Organic Lesions Simulating Migraine

Permanent Neurological or Vascular Damage from Migraine

The Structure of Migraine p. 109
Introductory Comments, Components and Functional Levels of Migraine,
Psychophysiological Stages of Migraine, General Characteristics of Migraine:
Relation to Sleep, Epilepsy, etc.

The Occurrence of Migraine

Introduction

The Predisposition to Migraine

Introductory Comments

Overall Incidence of Migraine

Familial Occurrence and Inheritance of Migraine

Signs of Migrainous Constitution

Migraine Diathesis in Relation to Other Disorders

Migraine in Relation to Age

General Discussion and Conclusions

Periodic and Paroxysmal Migraines

Migraine and Other Biological Cycles

Time Between Attacks: Relation Between Frequency and Severity of Attacks

Immunity Between Attacks

Signs of Approaching Attacks

Intrinsic and Extrinsic Determinants of Periodicity

Conclusions: The Notion of Idiopathy

Postscript (1992)

Circumstantial Migraine

Classification of Provocative Circumstances

Arousal Migraines: In Response to Light, Noise, Odours, Weather, Exercise, Excitement, Violent Emotions, Pain, Drugs, etc.

Slump Migraines: In Relation to Eating, Fasting, Heat, Fever, Passive Motion, Exhaustion, Drugs (Alcohol, Reserpine, etc.)

Nocturnal Migraines, and Relation of Attacks to Dreams and Nightmares

Migraine Aura in Response to Flickering Light, Patterned Stimuli, and Visualisation of Scotomata

Miscellaneous Determinants: Food, Constipation, Menstrual Cycles, Hormones, Allergies, etc.

Self-Perpetuation of Migraines

Provocation of Attacks in Relation to "Tuning" and Homeostatic Limits Within Nervous System

Situational Migraine

Migraine in Relation to Intolerable Emotional Stress

Preliminary Comments on "Migraine Personality" and Relation of Attacks to Repressed Hostility

Case-Histories Illustrating Wide Range of Situations and Character-Types in which Repeated Migraines May Occur

The Basis of Migraine

Introduction
Clarification of the Term "Cause" in Relation to Migraine

Necessity to View Migraine in Three Ways: as a Process in the Nervous System, as a Reaction to Certain Stimuli, and as a Particular Form of Experience

Physiological Mechanisms of Migraine

Historical Introduction: Classical Theories (Humoral and Sympathetic), Vascular and Vasomotor Theories of the Nineteenth Century

Critiques of These

Liveing's Theory of "Nerve Storms"

Current theories of Migraine Mechanisms and their Supporting Data

Vasomotor Theories (Latham-Wolff) Considered and Disputed

Chemical Theories of Migraine, with Particular Reference to Acetylcholine, Histamine, and Serotonin: Critique of These

Electroencephalographic Findings in Migraine: Notion of "Dysrhythmic Migraine," and of "Spreading Depression" in Relation to Migraine

Limitations of Current Theory and Data

The Physiological Organisation of Migraines

Introductory Comments

Migraines as Polymorphous Parasympathetic or Trophotropic Events

Migraine as a Slow Form of Centrencephalic Seizure

Consideration of Visual Hallucinations in Migraine and Their Cortical Basis

Hierarchical Organisation of Migraines, and Their Relationship to other Paroxysmal Events

Migraine Considered as a "Neural Task," with Fixed Ends and Variable Means

Biological Approaches to Migraine

Migraine Considered as a Special Form of Protective Behaviour

Its Affinities to other Passive Reactions to Threat (Passive Fear, "Freezing," Sham Death, Pathological Sleep, Fainting, etc.)

Contrast of These Reactions to Fight-Flight Responses

Concept of the Migraine Archetype, and its Differentiation in Response to Human Needs and Human Nervous Systems

Psychological Approaches to Migraine

Necessity of Considering Migraines as Experiences to which Emotional Values are Attached. Common Uses of Migraines: Recuperative, Regressive, Encapsulative, Dissociative, Aggressive, and Self-Punitive Attacks

Mechanisms of Psychosomatic Illness in Reference to Migraine

Migraine Considered as a "Vegetative Neurosis" and as a Special Form of Conversion Reaction

Attachment of Symbolic Value to Particular Symptoms of Migraine

Migraine Considered as an Archaic Form of Bodily Language

Conclusions

Therapeutic Approaches to Migraine

Introduction

General Measures in the Management of Migraine
Introductory Comments: Approach to the Patient and Role of the Physician
General Health Measures and Avoidance of Provocative Circumstances
Forms and Uses of Psychotherapy
Definition of Therapeutic Goals
Reasons for Success and Failure in the Treatment of Migraine
Specific Measures During and Between Attacks

Introductory and Historical Comments
Drugs of Specific Use During Acute Attacks: Ergotamine, its Uses and Contraindications, Caffeine, Parasympathetic Blockers (Belladonna, etc.), Sympathomimetic Drugs (Amphetamines, etc.)
Symptomatic Drugs: Analgesics, Anti-Emetics, etc.
Miscellaneous Drugs: Legitimate and Otherwise General Measures in the Acute Attack
Management of "Status Migrainosus"
Drugs Employed in the Prevention of Migraine Attacks: Methysergide (Sansert, Deseril), its Uses and Dangers
Use of Ergotamine Prophylactically
The Role of Sedatives, Tranquillisers, Anti-Depressants, etc.
Other Forms of Medication
The Uses of Placebos
Histamine "Desensitisation"
Allergic "Desensitisation"
Hormone Preparations, Their Abuses and Dangers
The Place of Surgical Procedures
Conclusions
Recent Advances in the Treatment of Migraine

Migraine as a Universal
Migraine Aura and Hallucinatory Constants (with Ralph M. Siegel, PH.D.)

Introduction
Types or Levels of Hallucination
Hallucinatory Constants
Mechanisms of Hallucination
Self-Organising Systems
A New Model of Migraine Aura
The Visions of Hildegard
Cardan's Visions (1570)
Remedies Advised by Willis (1672), Heberden (1801) and Gowers (1892)
Glossary of Case-Histories
Glossary of Terms
Bibliography
