Preface
Introduction
The art and science of large-scale disasters
Multiscale modeling for large-scale disaster applications
Addressing the root causes of large-scale disasters
Issues in disaster-relief logistics
Large-scale disasters: perspectives on medical response
Augmentation of health-care capacity in large-scale disasters
Energy, climate change and how to avoid a manmade disaster
Seawater agriculture for energy, warming, food, land and water
Natural and anthropogenic aerosol-related hazards affecting megacities
Tsunamis: Manifestation and aftermath
Intermediate-scale dynamics of the upper troposphere and stratosphere
Coupled weather-chemistry modeling
Seasonal-to-decadal prediction using climate models: successes and challenges
Climate change and related disasters
Impact of climate change on precipitation
Weather-related disasters in arid lands
The first hundred years of numerical weather prediction
Fundamental issues in numerical weather prediction
Space measurements for disaster response: the International Charter
Weather satellite measurements: their use for prediction
Epilogue
Index
