Preface p. xiii

Sports Engineering

The impact of science and technology on golf - A personal view p. 3
Can CFD make a performance difference in sport? p. 17
Aerodynamics and hydrodynamics in sports p. 31
Sportscience and engineering in education: a multimedia methodology to attract and educate young engineers p. 40
Innovation in sports equipment - particularities in processes and organization p. 55

Materials

A model of string-limbs stiffness in the lateral plane of the sport bow p. 65
A study of the barrel constructions of baseball bats p. 72
The effects of moisture content and workhardening on baseball bat performance p. 82
Comparative analysis of elastic and shock-absorbing properties of the biomechanical system "sportsman - footwear--surface" in footwear with different forefront sole technology p. 90
Multi-directional vibration analysis of cricket bats p. 96
The ageing behaviour of multi-piece golf balls p. 104
Evaluation of methods for designing table tennis rackets p. 111

Impact

The effect of impact velocity on baseball COR curve p. 121
Ankle protection in football shin guards p. 128
Computer simulations of the oblique impact of golf balls with circular plates of various thickness p. 136
Surface characterisation and friction characteristics of golf wedges p. 144
Shock attenuation of sports surfaces p. 152
Dynamic analysis of a tennis racket and ball impact and the coefficient of restitution p. 160
'Feel' in relation to the dynamic characteristics of tennis balls p. 168
Prediction of various factors associated with tennis impact: Effects of large ball and string tension p. 176
Putting spin on a tennis ball: Friction between tennis ball and racket string-bed p. 185
Experimental study on the effects of larger tennis balls on the comfort of the wrist and the elbow p. 192
Playing performance of tennis court surfaces p. 200
Estimation of tennis racket power using three-dimensional finite element analysis p. 207
A model of ball impacts on a tennis racket p. 215
The transmission of impact and vibration from tennis racket to hand p. 223
Why were 'spaghetti string' rackets banned in the game of tennis? p. 231

Vibration
Running tests and vibration analysis of bicycle-suspension with torsion spring p. 241
Development of the dynamic analysis of fishing rods p. 248
Characterisation and modelling of the vibration frequency of oversized golf drivers p. 255
Evaluating the effectiveness of dynamic vibration absorbers on high performance tennis rackets p. 262
A finite element vibration analysis of a tennis racket with an impact shock protection system p. 273
Fluid dynamics
The surface structure and aerodynamics of baseballs p. 283
Analysis of the mechanisms of bicycle-helmet ventilation p. 290
On the aerodynamics of the two-man bobsleigh p. 297
Aerodynamics of a cricket ball - the phenomenon of reverse swing p. 307
The curve kick of a football p. 315
Identification of Frisbee aerodynamic coefficients using flight data p. 322
The effect of dimple number on the flying characteristics of a golf ball p. 330
Optimisation
A method to determine the optimum solution in multi-variable dynamic simulation, and a preliminary application to human walking p. 339
Protection versus performance in bobsleigh ergonomics design p. 346
Modelling the dynamics of a fly line p. 353
The effect of mass distribution on the performance of golf clubs p. 360
Shape optimization of golf club heads p. 369
Torsional deflexion of club shafts during the golf swing p. 376
The development of the outer sole of golf shoes based on biomechanical properties p. 383
Numerical design of running shoes based on human response p. 393
Alpine ski racing: Use of optimal control theory to determine the "quickest" line between two gates p. 400
The optimization of flight distance in ski jumping p. 408
Aerodynamic optimization of a ski jump p. 415
The design of skis using plate bending theory p. 423
Design analysis of inline speed skates clap frame p. 431
Robotics
Development of a robot-arm by simulating Hill's equation for human muscular characteristics p. 443
Three-dimensional analysis of a new golf-swing robot emulating skillful golfers p. 450
Motion control of a new golf swing robot for hitting a ball p. 456
Study on the effective turn motion using a ski robot p. 463
Robot models of snowboarding and their computer simulation p. 470
A tennis serve impact simulation machine p. 477
Measurement

Measurement of on-target-trajectories in Olympic archery p. 487
The dynamic behaviour of a cricket ball impact and the effects of pitch construction p. 494
Estimation of forces and moments exerted on a baseball bat by hands using an instrumented bat p. 501
A bicycle frame Finite Element Analysis: standard tests and common cycling situations simulation p. 508
Fatigue performance of TIG welded age hardening aluminium-based alloy bicycle frames p. 515
Development of a wrist-watch to distinguish human motion patterns p. 522
Estimation of muscle activity during isometric contraction using a body surface hardness sensor with multiple reference points p. 529
Analysis of the influence of golf club design on the golf swing p. 537
Monitoring the performance of hockey pitches during construction p. 545
Measurement of acceleration applied to javelin during throwing p. 553
Comparison of the efficiency between a fixed and a movable stretcher in rowing p. 560
A rowing gate-based force sensor for the accurate assessment of propulsive force development p. 565
Short term estimation of abrasion in running shoes p. 573
Performance of EVA foam in running shoes p. 580
The effect of shoe fit on subjective responses, temperature and relative humidity levels p. 588
Shoe customization based on 3D deformation of a digital human p. 595
Foot loading analysis of primary movements in football p. 602
Development of new ski-system for legs-disabled persons p. 609
Design and development of a skate that simulates carved alpine ski turns off-snow p. 616
The characteristics of athletes' crouch starts in sprinting races using a new detection system p. 624
Measurement of propulsion by the hand during competitive swimming p. 631
Microcomputer-based data logging device for accelerometry in swimming p. 638
Application of a mathematical model of arm motion in front crawl swimming to kinematical analysis using an accelerometer p. 645

Motion Analysis

Silhouette - a remote coaching system using the outlines of a player p. 654
Dynamics of basketball-rim interactions p. 660
Development of real-time sports training aid system p. 667
Effects of rod taper on fly casting performance p. 673
Study on the dynamics of the golf swing and the mechanism of the wrist turn p. 680
A study on clubface direction during a golf swing p. 688
Matching of the shaft length of a golf club to an individual's golf swing motion p. 695
A study of link models for dynamic analysis of golf swing motion p. 701
Instruction on the optimal ski turn motion p. 708
Motion analysis and shape evaluation of a swimming monofin p. 716
Three-dimensional kinematics of the upper extremity in the tennis volley p. 725
A model of ball handling in overhead passing in volleyball p. 730

Biomechanics
Kinematics and kinetics of the joints of the lower limb during normal and bent-knee loaded walking p. 740
The design of ballistic load brake apparatus and its application training in Taekwondo p. 747
Decathlon ergonomic system: An application of biomechanical studies in cycling p. 755
The analysis of the human lower extremity exercise with voluntary muscle contraction p. 762
A study on the evaluation of human ride comfort due to biaxial vibration p. 769
Identification of human muscular characteristics of two-joint muscles using Genetic Algorithm (GA) p. 775
Determination of mechanical constraints in the lower limbs and the trunk during load carrying p. 783
An investigation of the advanced forward swing of the upper leg in relation to the lower leg while running p. 790
Characterization of the standing balance using dimension quantities p. 797
Accelerometer based kinematic biofeedback to improve athletic performance p. 803

A fundamental study on relation between impression and movement p. 810
Optimum takeoff angle in the standing long jump p. 817
Development of simplified numerical foot model for sole stability design p. 824
Footwear development using a finite element ankle/joint model p. 831
Hand direction to give maximum thrust in crawl strokes p. 838
Correlation between racquet design and arm injuries p. 845
Analysis of racket arm dynamics of soft-tennis overhand serve and comparison with standing smash p. 854

The effect of ball size upon point play, player perception, muscle fatigue and soreness amongst recreational players p. 861
The training effect of continuous impact training equipment p. 868
Exploring novel inspiratory muscle training technologies p. 876
Author index p. 883
Subject index p. 887
