Preface

Mission Operations (MO)

The History and Continuing Quest to Reduce the Costs of Spacecraft Ground Stations and Operations

Deep space network revitalization—operations for the 21st century

SLE-Services, a Step to Standardisation in Cross Support?

ROCSAT Multi-Mission Operations Center

Minimum Fuel Station Keeping Manoeuvre Strategy for TURKSAT Geostationary Satellites

Telemetry Tracking and Command (TTC)

Low-cost ground station of KitSAT-3

A Generic Method for Transferring Telemetry and Telecommand Data with Various Service Requirements

The Operation of CK01 GPS Tracking Station

Implementation of NSPO Remote Sensing Data Acquisition System

Satellite Ground System Procurement without Software Development

Autonomous Operations (AO)

Autonomous Command Operations of the WIRE Spacecraft

Ground Station Autonomous Operations

Autonomous Procedure Execution: A Means of Reducing Rosetta Operations Cost

The Spacecraft Emergency Response System (SERS) For Autonomous Mission Operations

The Architecture of Distributed Fusion System for Earth Observation

ROCSAT-1 Science Data Archive and Distribution System

Mission Planning (MP)

Cost Reduction of Satellite Systems: Lesson Learned from ROCSAT Programs

ROCSAT-1 Mission Planning and Scheduling System

NSPO Multi-Satellites Flight Dynamics Facility For ROCSAT Spacecraft Program

Separated Spacecraft Interferometry e-System Architecture Design and Optimization

Flying Cassini With Virtual Operations Teams

Small and Mini Satellites Support (SM)

Microsatellites and Minisatellites for Low Cost Missions

A Low-Cost Ground Station for the Small Satellite BIRD

A Preliminary Study on Aeroassisted Reentry of an LEO Microsatellite

On-board Restart Program with MS-DOS Function Calls for Small Satellites

Small and Mini Satellites Support (SM)

Design and Analysis of Low Orbiting Fourier Transform Spectrometer Sensorcraft

Micro Star Tracker and Attitude Determination System

To Reduce the Size of Satellites
The Ground System and the Mission Support For ROCSAT Space Program

Design Concept for a Miniaturized, High-Resolution Fourier Transform Spectrometer

Data Processing (DP)

Development of ROCSAT-1 Program

Low-Cost, High-Rate Data Processing

Hubble Space Telescope Servicing Mission Data Base Supports

Low Cost Archives

Using Data Archive Standards for Cost Reduction

Space Technology Education and Training Through a Low Cost Amateur Satellite Ground Station Development

Mission Control Centers (MCC)

Introduction to the ROCSAT-2 Program

Monitoring and diagnostic Expert System for Mars probe `NOZOMI'

Designing a Commercial Ground System to Reduce the Cost of Mission Operations

Tools for Operations Preparation and Automation: The OPSWARE Approach

The SCOS II Mimics System, an Advanced Display facility for Mission Control Systems

Development Tools (DT)

Introduction to ROCSAT-3 Program

A Cost Saving Project: Adapting a Modern Satellite Control System to Replace an Outdated Ground Support System (GSSS)

Spacecraft Attitude Control Law Design Using Low Cost PC Base Real-Time Simulator

Rosetta Common Check-out
