Provoking an Argument: Problems with Current Approaches to the Analysis of Biochemical Systems

Snapshots of systems: metabolic control analysis and biotechnology in the post-genomic era  p. 3

Moiety conservation and flux enhancement  p. 27

On the universality of the universal method  p. 33

Imposing Discipline: Manipulation of Organisms for Technological Ends

Life is complicated  p. 41

Regulation and redirection of metabolism: incorporating regulatory information in flux calculation  p. 49

Recent development in metabolic pathway analysis and their potential implications for biotechnology and medicine  p. 57

Quantifying the importance of regulatory loops in homeostatic control mechanisms: hierarchical control of DNA supercoiling  p. 67

An integrated approach to the analysis of the control and regulation of cellular systems  p. 73

Understanding Health and Disease: Why Organisms Behave as they do

Mechanism of carcinogenesis by polycyclic aromatic hydrocarbons: aneuploidy precedes malignant transformation and occurs in all cancers  p. 83

Metabolic control analysis shows how aneuploidy causes cancer  p. 99

The control strength of glucokinase in hepatocytes: a predictor of metabolic defects in maturity onset diabetes of the young, type 2  p. 109

Metabolic distress associated with impaired control by alternative substrates: two examples taken from purine metabolism  p. 117

Regulation of ATP supply in muscle: implications for importance of flux control coefficients and for the genesis of mitochondrial myopathies  p. 125

Regulation of energy metabolism in hepatocytes  p. 131

Combined NMR experimental and computer-simulation study of 2,3-bisphosphoglycerate metabolism in human erythrocytes  p. 139

Taking Aim: Use of Metabolic Models to Identify Drug Targets

Computational approaches to the study of biochemical pathways and metabolic control  p. 149

Using metabolic control analysis to improve the selectivity and effectiveness of drugs against parasitic diseases  p. 157

Computer simulation as a tool for studying metabolism and drug design  p. 165

Use of metabolic control analysis to design a new strategy for cancer therapy  p. 173

Facing Reality: Not just a Bag of Enzymes

Implications of cytoarchitectural analysis  p. 183

Probing the cell interior with NMR spectroscopy  p. 191

Metabolite channelling and protein-protein interactions in the urea synthesis pathway  p. 199

Intracellular distribution of glycogen synthase: Another regulatory mechanism of glycogen metabolism?  p. 207

Supramolecular organization and substrate channelling in the mammalian translation system  p. 215
Analysis of co-localization of glycolytic enzymes in flight muscle and its relation to muscle function in Drosophila

Thinking about Metabolism: The Relationship between Control and Regulation

Metabolic control from the back benches: biochemistry towards biocomplexity

Physiological consequences of a non-regulated mutant phosphofructokinase in Escherichia coli

Time-dependent or steady-state control of metabolic systems?

Multisite modulation in the control of glycolysis: balance of supply and demand?

Exercising control when control is distributed

Metabolic control design: implications and applications

Determining elasticities in situ

Coordination and homeostasis in the response to multiple signals: role of metabolic cascades

Putting the cart before the horse: designing a metabolic system in order to understand it

Predicting the structural design of metabolic pathways: an evolutionary approach

Glycogen structure: an evolutionary view

Taking Stock: Control Analysis in the Context of Metabolic Regulation

From control to regulation: a new prospect for metabolic control analysis

Metabolic control and metabolons in the millennium

In memoriam: Paul Srere, 1925-1999
