A spatial standard observer for vision technology

Celestial illusions and ancient astronomers: Aristarchus and Eratosthenes

Do humans discount the illuminant?

A model of the formation of a self-organized cortical representation of color

A study of human recognition rates for foveola-sized image patches selected from initial and final fixations on calibrated natural images

Toward a multilevel cognitive probabilistic representation of space

Top-down processes in perceiving false depth and motion for faces and scenes

Local cross-correlation model of stereo correspondence

The riches of the cyclopean paradigm

Spatio-temporal interactions that promote the smoothness constraint for binocular matches

Sharpening image motion based on the spatio-temporal characteristics of human vision

Spatial quantization via local texture masking

Perceptual analysis of video impairments that combine blocky, blurry, noisy, and ringing synthetic artifacts

Delicate visual artifacts of advanced digital video processing algorithms

Analysis of psychological factors for quality assessment of interactive multimodal service

Audiovisual quality evaluation of low-bitrate video

Reduced-reference image quality assessment using a wavelet-domain natural image statistic model

Reference-free objective quality metrics for MPEG-coded video

No reference video quality estimation based on human visual system for 2.5/3G devices

Can gamut mapping quality be predicted by colour image difference formulae?

Perceptual evaluation of tone mapping operators with real-world scenes

Predicting visible differences in high dynamic range images: model and its calibration

Mimicking human texture classification

Experimental determination of visual color and texture statistics for image segmentation

Pictorial relief for equiluminant images

Transient-based image segmentation: top-down surround suppression in human V1

A human visual model-based approach of the visual attention and performance evaluation

The utility of perspecta 3D volumetric display for completion of tasks

Stylized rendering for multiresolution image representation

Vision, healing brush, and fiber bundles

A horopter for two-point perspective

Where should you sit to watch a movie?
