Multisource evidence fusion for cyber-situation assessment
Combining elements of information fusion and knowledge-based systems to support situation analysis
Rule-based situation assessment for sea surveillance
Realizing situation awareness within a cyber environment
Measuring situational awareness and resolving inherent high-level fusion obstacles
Intent inference for attack aircraft through fusion
Higher-level fusion for military operations based on abductive inference: proof of principle
Fusing terrain and goals: agent control in urban environments
Hybrid methods for multisource information fusion and decision support
CommonSense: a preprocessing system to identify errors in large transcribed corpora
Pedestrian detection by multispectral fusion
Feature extraction and fusion for protein structure identification in cryo-electron microscopic images using independent component analysis and the projection-slice synthetic filter
Prediction of adverse outcomes of acute coronary syndrome using intelligent fusion of triage information with HUMINT
Investigation of target tracking performance for unattended ground sensor networks employing distributed cluster management
A fusion approach for coarse-to-fine target recognition
Feature selection for real-time tracking
Netwar
Minimizing both dropped formulas and concepts in knowledge fusion
Distributed sensor data compression algorithm
Fusing diverse monitoring algorithms for robust change detection
Noise reduction method for the multisensor system measuring DC current
TANDI: threat assessment of network data and information
The challenge of scalable and distributed fusion of disparate sources of information
Fuselets: an agent based architecture for fusion of heterogeneous information and data
Data fusion on a distributed heterogeneous sensor network
Processing heterogeneous XML data from multi-source
A preprocessing and automated algorithm selection system for image registration
An approach for performance comparison of image registration methods
MeRis and ETM image fusion for spatial resolution improvement
A novel ICA domain multimodal image fusion algorithm
A novel image fusion algorithm based on human vision system
A novel algorithm of image fusion using finite ridgelet transform
The contourlet transform for image fusion
