Cloud remote sensing from space in the era of the A-Train

Satellite observations of the date of snowmelt at 60[degree] and 70[degree] north latitude

A new approach to reduce inconsistency between MODIS and ASTER land surface temperature products

Retrieval of high latitude land surface properties from the high-spectral resolution infrared sounders: AIRS, IASI, and CrIS

Land surface modeling and satellite passive microwave imagery: a comparison of top soil moisture and surface temperature estimates

NDVI fluctuations from 1995 to 2006 in South Italy and North Africa: a search for a climate change indicator

The use of ATLAS data to quantify surface radiative budget alteration through urbanization for San Juan, Puerto Rico

Historical data set of satellite-derived global soil moisture and land surface temperature

Forest changes assessment using satellite remote sensing imagery

Processing and analyzing advanced hyperspectral imagery data

Extended spatial logit models of deforestation due to population and relief energy in East Asia

Hyperspectral data and methods for coastal water mapping

Estimation of canopy structure parameters from multiangular measurements of scattering components

Leaf area index determination of wheat indicating heterogeneous soil conditions

Cost effectiveness of vegetation biophysical parameters retrieval from remote sensing data

Crop yield prediction using multipolarization radar and multitemporal visible/infrared imagery

The use of MODIS-simulated spectral bands for monitoring plant water stress as a help for dynamic fire risk assessment

Study of the diurnal cycle of stressed vegetation for the improvement of fluorescence remote sensing

Operational tools for irrigation water management based on Earth observation: the DEMETER project

Monitoring crop coefficient of orange orchards using energy balance and the remote sensed NDVI

A real-time crop classification system for evapotranspiration estimates in irrigated areas

Integrated remote sensing and hydrological models for water balance in mountain watersheds

Actual evapotranspiration estimation by means of airborne and satellite remote sensing data

Comparison of remote sensing-based energy balance methods for estimating crop evapotranspiration

A methodology for conducting diagnostic analyses and operational simulation in large-scale pressurized irrigation systems

Stress detection in orchards with hyperspectral remote sensing data
Remote characterization of fuel types using multi- and hyper-spectral data
Application of rangefinder for small forest fire detection
Error analysis of scaling evapotranspiration over heterogeneous land surface
Comparison of different approaches to retrieve plant water content of summer barley canopies from spectroradiometric measurements
Paddy rice mapping of the Caspian Sea coast using microwave and optical remotely sensed data
An algorithm to retrieve land surface temperature from ASTER thermal band data for agricultural drought monitoring
Estimating canopy chlorophyll and nitrogen concentration of rice from EO-1 Hyperion data
Quantitative retrieving forest ecological parameters based on remote sensing in Liping County of China
The modification and application of basin evapotranspiration simulation module in AVSWAT2000 distributed hydrological model
Distributed hydrological modeling study with the dynamic water yielding mechanism and RS/GIS techniques
