Multisensor Fusion, Multitarget Tracking, and Resource Management I
Some interesting observations regarding the initialization of unscented and extended Kalman filters
A simple algorithm for sensor fusion using spatial voting (unsupervised object grouping)
A particle-filtering approach to convoy tracking in the midst of civilian traffic
Long-term ground movement prediction by Monte Carlo simulation
Gaussian mixture probability hypothesis density smoothing with multistatic sonar
Estimating target range-Doppler image slope for maneuver indication
Effect of sensor bias on space-based bearing-only tracker
Multisensor Fusion, Multitarget Tracking, and Resource Management II
Improving automatic cooperation between UAVs through co-evolution
Evaluation of an information-based sensor management system
Collaborative distributed sensor management and information exchange flow control for multitarget tracking using Markov decision processes
Assisted Target Recognition (ATR) I
Experimental feature-based SAR ATR performance evaluation under different operational conditions
Detecting missile-like flying target from a distance in sequence images
Generation of efficient 2D templates from 3D multisensor data for correlation-based target tracking
An approach for evaluating assisted target detection technology
Assisted Target Recognition (ATR) II
On the limits of target recognition in the presence of atmospheric effects
A distributed automatic target recognition system using multiple low resolution sensors
Multi-viewpoint image fusion for urban sensing applications
Virtual simulation tools for artillery
Multisensor Fusion Methodologies and Applications I
Multitarget-moment filters for nonstandard measurement models
Joint search and sensor management for geosynchronous satellites
Dynamic sensor management of dispersed and disparate sensors for tracking resident space objects
Multisensor Fusion Methodologies and Applications II
An initial investigation into incorporating human reports into a road-constrained random set tracker
Service-based extensions to the JDL fusion model
Handling target obscuration through Markov chain observations
Multisensor Fusion Methodologies and Applications III
Statistical, biological, and categorical sensor fusion: an integrated methodology
A confidence paradigm for classification systems
Multisensor Fusion Methodologies and Applications IV
Structured pedigree information for distributed fusion systems
Analytical performance evaluation for autonomous sensor fusion
Convergence study of message passing in arbitrary continuous Bayesian networks
Algebra of Dempster-Shafer evidence accumulation
Multisensor Fusion Methodologies and Applications V
Incorporation of indirect evidence into an evidence accrual technique for higher level data fusion
Results from levels 2/3 fusion implementations: issues, challenges, retrospectives, and perspectives for the future an annotated perspective
A collaborative eye to the future
Signal and Image Processing I
Efficient super-resolution image reconstruction applied to surveillance video captured by small unmanned aircraft systems
Super-resolution image reconstruction from UAS surveillance video through affine invariant interest point-based motion estimation
A smart iterative algorithm for multisensor image registration
3D organization of 2D urban imagery
Fusing images and maps
An investigation of image fusion algorithms using a visual performance-based image evaluation methodology
Compressed sensing technique for high-resolution radar imaging
Fast algorithms for video target detection and tracking
Interval least-squares filtering with applications to video target tracking
Signal and Image Processing II
Frustrated polarization fiber Sagnac interferometer displacement sensor
On modeling sea clutter by diffusive models
On modeling sea clutter by noisy chaotic dynamics
Large spot size laser vibrometry insensitivity occurs in 1-D vibrations only
Signal and Image Processing III
The use of interferoceiver for the prevention of fratricide in missile defense
Empirical performance of the spectral independent morphological adaptive classifier
Comparison of theoretical and empirical statistics of wind measurements with validation lidar (VALIDAR)
Poster Session
A real-time geographical information exchange system with PDA
Object recognition in infrared image sequences using scale invariant feature transform
Image fusion in infrared image and visual image using normalized mutual information
Dynamic stimulus enhancement with Gabor-based filtered images
Correlating military operators' visual demands with multi-spectral image fusion
Multisensory data exploitation using advanced image fusion and adaptive colorization
Multi-mode sensor processing on a dynamically reconfigurable massively parallel processor array
