A DC to AC converter with thyristor inverter and active compensation  p. 1
Zeta converter operating in continuous conduction mode using the unity power factor technique  p. 7
Adaptive control of a current-fed active filter  p. 12
Harmonic control in distorted voltage supply systems  p. 18
Harmonic filtering of large induction motor variable frequency drives  p. 24
Modelling frequency dependency of induction machine equivalent circuit parameters  p. 30
Combined impact of iron loss and main flux saturation on operation of vector controlled induction machines  p. 36
Identification of the induction motor dynamic and static inductance with regard to saturation  p. 42
DSP based on-line parameter identification of induction machine  p. 48
New energy recovery snubber configurations for IGBT inverters  p. 54
Research on a novel active snubber circuit  p. 60
Soft reverse recovery power diodes diffused with Iridium  p. 65
Development of a model for photovoltaic arrays suitable for use in simulation studies of solar energy conversion systems  p. 69
Thyrists revisited - the role of improved performance and design in modern applications  p. 75
Discrete sliding control technique of DC motor drive  p. 81
Optimal commutation angles for current controlled switched reluctance motors  p. 87
Semi-converter fault diagnosis in DC motor drives by Park's Vector Approach  p. 93
Saturation effects in small brushless DC motors - a simplified approach  p. 99
Matrix converter application for direct-drive gas turbine generators sets  p. 103
An Efficient space vector modulation algorithm for AC-AC matrix converters: analysis and implementation  p. 108
Investigation of a low-cost power factor correction circuit for use with voltage source induction motor drives  p. 114
A control method for active power filters under unbalanced non-sinusoidal conditions  p. 120
A novel circuit topology of three-phase active power filtering-based converter operating at discontinuous current mode control scheme  p. 125
Comparison of conducted RFI emission from different unity power factor AC/DC converters  p. 132
Novel single phase current source buck PFC with delta modulation control strategy  p. 138
A proposed predictive average current controller for four-wire boost rectifiers  p. 144
An active filter for retrofit applications  p. 150
Reduction of EMI emission from power converters using soft-switching technique  p. 156
A power supply system with distortion eliminating properties  p. 162
A study of the operation of a class E amplifier at 13.56 MHZ  p. 168
Saturable reactor and lossless capacitor-assisted zero voltage transition asymmetrical PWM DC-DC converter with high-frequency transformer link p. 173

The role of converters and their control in the recovery of wave and wind energy p. 179

Very high bandwidth digital current controller for high-performance motor drives p. 185

Improved position control of a linear reluctance servo drive p. 191

Variable structure control of a disc motor with lateral rotor movement p. 197

Development of a high-efficiency switched reluctance drive using soft-switching techniques p. 203

A soft switching parallel quasi resonant dc-link inverter with modified asynchronous space vector PWM p. 208

An assessment of resonant converters for induction motor drives applications up to 100KW p. 214

High efficiency testing laboratory for motors, drives and generators p. 220

The measurement of transient electromagnetic torque in high-performance electrical drives p. 226

Active control of stator vibration in a switched reluctance sector motor p. 230

A comparison of IGBT technologies for use in the series connection p. 236

The MBGT: A thyristor with IGBT switching characteristics p. 242

On the use of a P+N+ mosaic contact for fast switching diode applications p. 247

Switching performance of 4H-SiC power devices p. 253

Field weakening at high and low speed for sensorless vector controlled induction motor drives p. 258

Sensorless position cage induction motor drive using an asymmetric outer-section cage p. 262

Speed sensorless vector control of induction motors with parameter estimation p. 267

Neural network applications in control of electric vehicle induction machine drives p. 273

Speed estimation from noisy resolver signals p. 279

Discrete speed estimation from a position encoder for motor drives p. 283

Robust PMLSM servo system using disturbance observer based on acceleration control loop p. 288

Comparison of simulation and test results for an AC commutator-less motor drive p. 294

Control strategy for AC servo motion drive system with mechanically resonant load and its design approach p. 300

Analytical determination of the double star synchronous machine commutating reactance p. 306

A quasi zero-magnetic-flux current sensor with large bandwidth for power semiconductors switches p. 311

The investigation and development of a multi-level voltage source inverter p. 317

Induction machine speed sensor based on stator current measurement p. 322

An extended analysis of 6-pulse AC/DC converters taking account of commutation p. 328
A design of defense circuits of high-frequency thyristored inverters  p. 336
A drive system for the Pirouette kinetic energy storage system  p. 342
Novel random PWM schemes with weighted switching decision  p. 348
Multi-Level Converters and large power inverters  p. 354
DSP based control for the new generation of complex convertors  p. 360
A unique digital control scheme of multiple bridges power conversion circuits for advanced magnetic resonance imaging  p. 366
Sliding-mode control of PWM Cuk converter  p. 372
A drive-system with a digitally controlled matrix-converter feeding an AC-induction machine  p. 378
Cyclo converter drive systems  p. 383
Compensation of fluctuating DC link voltage for transaction inverter drive  p. 390
The integration of a bi-directional rectifier and a voltage fed inverter in an optimised high performance variable speed AC motor drive system  p. 396
Effect of DC link capacitance on the transient response of a PWM AC-DC converter  p. 401
A variable speed single-phase induction motor drive using a smart power module  p. 407
An investigation of bifilar wound three-phase induction motor drives operating with only low side switches  p. 413
The design and performance of a self-starting 2-phase switched reluctance drive  p. 419
Adaptive fuzzy-neural DSP control of high-performance drives  p. 424
Motor speed control by using a fuzzy logic model reference adaptive controller  p. 430
Fuzzy logic control of an induction machine: a behaviourable approach  p. 436
High frequency thyristored converter for supplying commuter trains  p. 442
A direct coupled 4-quadrant multilevel converter for 16 2/3 Hz traction systems  p. 448
A new discrete current vector regulator for torque controlled induction motor drives  p. 454
Control of induction motors with winding commutation for traction applications  p. 459
Practical evaluation of two stator flux estimation techniques for high performance direct torque control  p. 465
Expert system based switched mode power supply design  p. 471
Determination of winding losses of high frequency planar-type transformer using finite element method  p. 477
A generic computer-aided simulation approach for digitally-controlled switching mode power converter circuits and systems  p. 483
Modelling and simulation of an advanced static VAR compensator using SABER  p. 490
Optimal PWM waveform modelling for on-line AC drive control  p. 496
Performance study of PROSCES/machine program - available through the SABER program  p. 502
Numerical simulation of power static converters: diagonalization method of the dynamical matrix p. 508

Analysis of a new soft switching PWM inverter p. 513

Current control of voltage-type PWM rectifier introducing resonance-based controller p. 519

Feasible characteristic evaluations of resonant PWM inverter-link DC-DC power converter using high-voltage transformer parasitic circuit components p. 525

Zero-voltage-switched, PWM, phase-shifted converter employing an auxiliary resonant net p. 534

A cost-effective quasi-resonant DC-DC power converter using a novel phase-shifted PWM scheme p. 540

Innovative development of electromagnetic induction-based fluid-heating resonant PWM inverter with power factor correction scheme p. 546

Electromagnetic compatibility of variable speed drives p. 552

EMC measurements and simulation in variable speed drives p. 558

Neutral-to-ground voltage minimisation in a PWM-rectifier, PWM-rectifier/inverter configuration p. 564

Measures to cope with a.c. motor insulation stress due to IGBT-inverter supply p. 569
