Introduction to Cryotherapy
The What and Why of Cryotherapy
Why the Confusion?
What Is Cryotherapy?
Cryotherapeutic Techniques
What Happens When Cold Is Applied?
Heat vs. Cold: When and Why
Summary
Historical Perspective
Heat vs. Cold
Early Medical Uses of Cold
Cold and Immediate Care
Use of Ice for Rehabilitation: The History of Cryokinetics
Summary
The Scientific Basis of Cryotherapy
Theory vs. Technique
Central and Local Responses
Pathophysiology
Inflammation and Wound Repair
The Inflammatory Response
The Sport Injury Model
Secondary Injury
Swelling: Hemorrhaging and Edema
The Healing Process
Summary
Sport Injury Rehabilitation
Rehabilitation vs. Reconditioning
What Rehabilitation Is Not
Principles of Rehabilitation
A Systems Approach to Total Rehabilitation: The 10 Phases
What Modality Is Used When?
The Psychology of Rehabilitation
Summary
Temperature Changes Resulting From Cold Applications
Heat and How It Is Measured
Heat Conduction
Heat Capacity
Surface Temperature
Deep-Tissue Temperature
Intraarticular Temperature
Rewarming Following Cold Applications
Controversy Over Contralateral Limb Temperatures
Adaptation to a Cold Environment
Summary
Metabolism and Inflammation
Decreased Metabolism at Lower Temperatures
Cryotherapy in Cardiac Surgery and Transplant Surgery
Studies of Induced Injuries
Cryotherapy and Inflammation
Effects of Cold on Wound Healing
Summary
Rest, Ice, Compression, Elevation, and Stabilization for the Immediate Care of Acute Traumatic Injuries
Clinical Studies
Effects of Ice During Immediate Care
Effects of Ice on Swelling
Effects of Compression on Swelling
Effects of Elevation on Swelling
Rest
Stabilization
What Types of Injuries Are Treated With RICES?
Ice Application Protocols
Summary
Orthopedic Surgery and Cryotherapy
Postsurgical Cryotherapy
Presurgical Cryotherapy
Cryoanalgesia
Summary
Circulatory Effects of Therapeutic Cold Applications
What Is Cold-Induced Vasodilation?
What Is Dilation?
Cold Dilemma
Evidence for CIVD
CIVD: A Red Herring
Benefits of the CIVD Theory
Contrast Baths
Summary
Neurological and Neuromuscular Effects of Cold Applications
Effects of Cold on Sensory Nerve Functions
Effects of Cold on Neuromuscular Parameters
Tetanic Tension
Cold Machines  
Vapo-Coolant Spray  
Vapo-Coolant Cuffs  
Initial Care of Acute Injuries: The RICES Technique  
Summary of Rationale for RICES  
Equipment Needed  
Preapplication Procedures  
Application Procedures  
Postapplication Procedures  
Key Points for Applying RICES  
Cryokinetics in Rehabilitation of Joint Sprains  
Summary of Rationale for Cryokinetics  
Equipment Needed  
Preapplication Procedures  
Application Procedures  
Alternatives  
Key Points for Using Cryokinetics  
Relieving Acute Muscle Spasm: Cryostretch  
Cryostretch  
Summary of Rationale for Cryostretching  
Equipment Needed  
Preapplication Procedures  
Application Procedures  
Combined Cryostretch and Cryokinetics  
Key Points for Using Cryostretch  
Postsurgical Cryotherapy  
Aircast Cryo Cuff  
Dura-Kold Packs  
Circulating Cold-Water Machines  
Cryotherapeutic Techniques for Relieving Pain  
Relieving Menstrual Cramps  
Application Procedures  
Treating Headaches  
Painless Injection and Venipuncture  
Myofascial Trigger Point Therapy  
Application Procedures  
Miscellaneous Cryotherapeutic Techniques  
Medicated Ice for Abrasions  
Equipment Needed  
Preapplication Procedures
Application Procedures
Stretching Connective Tissue
Equipment Needed
Application Procedures
Cooling Athletes During Exercise in a Hot Environment
Minimizing Cold Sores
Application Procedures
Minimizing Blisters
Prevention of Hair Loss During Doxorubicin Chemotherapy
