

Contributors	p. xiii
Preface	p. xvii
Relativistic Configuration Interaction Calculations for Lanthanide and Actinide Anions	p. 1
Introduction	p. 1
Bound Rare Earth Anion States	p. 2
Lanthanide and Actinide Anion Survey	p. 3
Prior Results and Motivation for the Survey	p. 3
Techniques for Basis Set Construction and Analysis	p. 6
Discussion of Results	p. 9
Resonance and Photodetachment Cross Section of Anions	p. 12
The Configuration Interaction in the Continuum Formalism	p. 13
Calculation of the Final State Wavefunctions	p. 15
Study of Actinides by Relativistic Coupled Cluster Methods	p. 23
Introduction	p. 23
Methodology	p. 25
The Relativistic Hamiltonian	p. 25
Pock-Space Coupled Cluster Approach	p. 25
The Intermediate Hamiltonian CC method	p. 27
Applications to Actinides	p. 30
Actinium and Its Homologies: Inteiplay of Relativity and Correlation	p. 31
Thorium and Eka-thorium: Different Level Structure	p. 35
Rmlike actinide ions	p. 39
Electronic Spectrum of Superheavy Elements Nobelium (Z=102) and Lawrencium (Z=103)	p. 42
The Levels of $U^{4+}$ and $U^{5+}$ : Dynamic Correlation and Breit Interaction	p. 45
Relativistic Coupled Cluster Approach to Actinide Molecules	p. 48
Summary and Conclusion	p. 49
Relativistic All-Electron Approaches to the Study of f Element Chemistry	p. 55
Introduction	p. 55
Relativistic Hamiltonians	p. 59
General Aspects	p. 59
Four-Component Hamiltonians	p. 61
Two-Component Hamiltonians	p. 65
Numerical Example	p. 69
Choice of Basis Sets	p. 71
Electronic Structure Methods	p. 73
Coupled Cluster Approaches	p. 75
Multi-Reference Perturbation Theory	p. 80
(Time-Dependent) Density Functional Theory	p. 82
Conclusions and Outlook	p. 83

Low-Lying Excited States of Lanthanide Diatomics Studied by Four-Component Relativistic Configuration Interaction Methods	p. 89
Introduction	p. 89
Method of Calculation	p. 90
Quaternion Symmetry	p. 90
Basis Set and HFR/DC Method	p. 91
GOSCI and RASCI Methods	p. 91
Ground State	p. 92
CeO Ground State	p. 92
CeF Ground State	p. 97
Discussion of Bonding in CeO and CeF	p. 101
GdF Ground State	p. 102
Summary of the Chemical Bonds, of CeO, CeF, GdF	p. 104
Excited States	p. 106
CeO Excited States	p. 106
CeF Excited States	p. 108
GdF Excited States	p. 108
Conclusion	p. 116
The Complete-Active-Space Self-Consistent-Field Approach and Its Application to Molecular Complexes of the f-Elements	p. 121
Introduction	p. 121
Treatment of Relativistic Effects	p. 123
Basis Sets	p. 123
Identifying and Incorporating Electron Correlation	p. 124
The Hartree Product Wavefunction	p. 124
Slater Determinants and Fermi Correlation	p. 124
Coulomb Correlation	p. 126
Configuration Interaction and the Multiconfigurational Wavefunction	p. 127
The Configuration Interaction Approach	p. 127
CI and the Dissociation of H <sub>2</sub>	p. 128
Static Correlation and Crystal Field Splitting	p. 130
Size Inconsistency and Coupled Cluster Theory	p. 131
Computational Expense of CI and the Need for Truncation	p. 132
CASSCF and Related Approaches	p. 133
The Natural Orbitals	p. 133
Optimisation of the CASSCF Wavefunction	p. 133
Variants and Generalisations of CASSCF	p. 137
Selection of Active Spaces	p. 138
Chemical Intuition and Bjorn's Rules	p. 138
Natural Orbital Occupations	p. 139
RAS Probing	p. 139

Dynamical Correlation	p. 139
Multireference Configuration Interaction	p. 140
Multireference Second Order Perturbation Theory	p. 140
Applications	p. 141
Bonding in Actinide Dimers	p. 141
Covalent Interactions in the U-O Bond of Uranyl	p. 142
Covalency and Oxidation State in f-Element Metallocenes	p. 143
Concluding Remarks	p. 144
Relativistic Pseudopotentials and Their Applications	p. 147
Introduction	p. 147
Valence-only Model Hamiltonian	p. 149
Pseudopotentials	p. 150
Approximations	p. 151
Choice of the Core	p. 153
Pseudopotential Adjustment	p. 155
Energy-Consistent Pseudopotentials	p. 155
Shape-Consistent Pseudopotentials	p. 158
Valence Basis Sets for Pseudopotentials	p. 161
Selected Applications	p. 162
DFT Calculated M-X (M = Ln, An; X = O, S, I) Bond Lengths	p. 163
Lanthanide(III) and Actinide(III) Hydration	p. 166
Lanthanide(III) and Actinide(III) Separation	p. 170
Conclusions and Outlook	p. 172
Error-Balanced Segmented Contracted Gaussian Basis Sets: A Concept and Its Extension to the Lanthanides	p. 181
Introduction	p. 181
Core and Valence Shells: General and Segmented Contraction Scheme	p. 182
Polarization Functions and Error Balancing	p. 185
Considerations for Lanthanides	p. 187
Gaussian Basis Sets for Lanthanide and Actinide Elements: Strategies for Their Development and Use	p. 195
Introduction	p. 195
Basis Set Design	p. 196
General Considerations	p. 196
Basis Sets for the f Block	p. 197
Overview of Existing Basis Sets for Lanthanides and Actinide Elements	p. 204
All-Electron Treatments	p. 204
Effective Core Potential Treatments	p. 205
Systematically Convergent Basis Sets for the f Block	p. 206
All-Electron	p. 207
Pseudopotential-Based	p. 208

Basis Set Convergence in Molecular Calculations	p. 210
Conclusions	p. 213
4f, 5d, 6s, and Impurity-Trapped Exciton States of Lanthanides in Solids	p. 217
Introduction	p. 217
Methods	p. 220
Embedded-Cluster Methods	p. 221
Combined Use of Periodic Boundary Condition Methods and Embedded Cluster Methods	p. 227
Absorption and Emission Spectra	p. 227
Applications	p. 228
Bond Lengths	p. 228
Energy Gaps	p. 231
Impurity-Trapped Excitons	p. 232
Solid-State-Lighting Phosphors	p. 234
Judd-Ofelt Theory - The Golden (and the Only One) Theoretical Tool of f-Electron Spectroscopy	p. 241
Introduction	p. 241
Non-relativistic Approach	p. 245
Standard Judd-Ofelt Theory and Its Original Formulation of 1962	p. 248
Challenges of ab initio Calculations	p. 251
Problems with the Interpretation of the f-Spectra	p. 255
Third-Order Contributions 257 10.3.1 Third-Order Electron Correlation Effective Operators	p. 259
Relativistic Approach	p. 260
Parameterizations of the f-Spectra	p. 262
Applied Computational Actinide Chemistry	p. 269
Introduction	p. 269
Relativistic Correlated Methods for Ground and Excited States	p. 270
Spin-Orbit Effects on Heavy Elements	p. 272
Valence Spectroscopy and Excited States	p. 273
Accuracy of Electron Correlation Methods for Actinide Excited States: WFT and DFT Methods	p. 273
Valence Spectra of Larger Molecular Systems	p. 275
Effects of the Condensed-Phase Environment	p. 276
Current Challenges for Electronic Structure Calculations of Heavy Elements	p. 278
Core Spectroscopies	p. 278
X-ray Photoelectron Spectroscopy (XPS)	p. 279
X-ray Absorption Spectroscopies	p. 280
Complex Formation and Ligand-Exchange Reactions	p. 283
Calculations of Standard Reduction Potential and Studies of Redox Chemical Processes	p. 286
General Conclusions	p. 288

Computational Tools for Predictive Modeling of Properties in Complex Actinide Systems	p. 299
Introduction	p. 299
ZORA Hamiltonian and Magnetic Property Calculations	p. 300
ZORA Hamiltonian	p. 300
Magnetic properties	p. 303
X2C Hamiltonian and Molecular Properties from X2C Calculations	p. 312
Role of Dynamics on Thermodynamic Properties	p. 319
Sampling Free Energy Space with Metadynamics	p. 319
Hydrolysis constants for U(IV), U(V), and U(VI)	p. 320
Effects of Counter Ions on the Coordination of Cm(III) in Aqueous Solution	p. 322
Modeling of XAS (EXAFS, XANES) Properties	p. 325
EXAFS of U(IV) and U(V) Species	p. 327
XANES Spectra of Actinide Complexes	p. 330
Theoretical Treatment of the Redox Chemistry of Low Valent Lanthanide and Actinide Complexes	p. 343
Introduction	p. 343
Divalent Lanthanides	p. 349
Computing the Nature of the Ground State	p. 349
Single Electron Transfer Energy Determination in Divalent Lanthanide Chemistry	p. 352
Low-Valent Actinides	p. 356
Actinide(III) Reactivity	p. 356
Other Oxidation State (Uranyl...)	p. 361
Conclusions	p. 365
Computational Studies of Bonding and Reactivity in Actinide Molecular Complexes	p. 375
Introduction	p. 375
Basic Considerations	p. 376
Bond Energies	p. 376
Effect of Scalar Relativistic Corrections	p. 377
Spin-Orbit Corrections	p. 378
Relativistic Effective Core Potentials (RECP)	p. 379
Basis Sets	p. 380
Density Functional Approximations for Use with f-Element Complexes	p. 381
Example of application: Performance in Sample Situation ( $UF_6 \rightarrow UF_5 + F$ ) [39,40]	p. 382
Molecular Systems with Unpaired Electrons	p. 384
Nature of Bonding Interactions	p. 385
Chemistry Application: Reactivity	p. 387
First Example: Study of C-H Bond Activation Reaction	p. 387
Study of Imido-Exchange Reaction Mechanism	p. 395

Final Remarks	p. 397
The 32-Electron Principle: A New Magic Number	p. 401
Introduction	p. 401
Mononuclear, ML <sub>n</sub> systems	p. 401
Metal Clusters as 'Superatoms'	p. 402
The Present Review: An@L <sub>n</sub> -Type Systems	p. 404
Cases So Far Studied	p. 404
The Early Years: Pb <sup>2-</sup> <sub>12</sub> and Sn <sup>2-</sup> <sub>12</sub> Clusters	p. 404
The Validation: An@C <sub>28</sub> (An = Th, Pa+, U <sup>2+</sup> , Pu <sup>4+</sup> ) Series	p. 410
The Confirmation: LU@Si <sub>20</sub> I <sup>6-</sup> -like Isoelectronic Series	p. 413
Influence of Relativity	p. 418
A Survey of the Current Literature on Lanthanide-and Actinide-Centered Clusters	p. 420
Concluding Remarks	p. 421
Shell Structure, Relativistic and Electron Correlation Effects in f Elements and Their Importance for Cerium(III)-based Molecular Kondo Systems	p. 425
Introduction	p. 425
Shell Structure, Relativistic and Electron Correlation Effects	p. 429
Shell Structure	p. 430
Relativistic Effects	p. 433
Electron Correlation Effects	p. 437
Molecular Kondo-type Systems	p. 439
Bis(n <sup>8</sup> -cyclooctatetraenyl)cerium	p. 440
Bis(n <sup>8</sup> -pentalene)cerium	p. 443
Conclusions	p. 446
Index	p. 451

Color plates appear between pages 342 and 343
