

List of contributors	p. xi
Preface	p. xvii
What does 'sustainable construction' mean? An overview	p. 1
Introduction	p. 1
The influence of the building sector	p. 3
Can we afford sustainability?	p. 6
How can we achieve sustainability in the building sector?	p. 6
Aims of sustainable construction	p. 7
Ecological aims	p. 8
Social aims	p. 10
Economic aims	p. 11
References	p. 12
Legal background and codes in Europe	p. 13
Normative background	p. 14
Comments on EN 15804 and EN 15978	p. 14
Modular life-cycle stages	p. 14
Comparability of EPDs for construction products	p. 16
Functional equivalent	p. 17
Scenarios at product or building level	p. 17
Reuse and recycling in module D	p. 18
Aggregation of the information modules	p. 19
Legal framework	p. 19
EU waste framework directive and waste management acts in European countries: product responsibility	p. 19
EU construction products regulation	p. 22
EU building directive and energy saving ordinance	p. 23
Focus increasingly on construction products	p. 26
EU industrial emissions directive	p. 26
References	p. 27
Basic principles of sustainability assessment	p. 29
The life-cycle concept	p. 29
What is the meaning of the life-cycle concept?	p. 29
Life-cycle phases of a building	p. 29
Life-cycle planning	p. 32
Building Information Modeling in steel construction	p. 32
Integrated and life-cycle-oriented planning	p. 39
Life-cycle assessment and functional unit	p. 45
Environmental impact categories	p. 47
Life-cycle costing	p. 48
Life-cycle costing - cost application including cost planning	p. 51
Net present value method	p. 52
Life-cycle cost analysis	p. 53

Energy efficiency	p. 59
Environmental product declarations	p. 60
Institute Construction and Environment (LBU) - Program Operator for EPDs in Germany	p. 62
The ECO Platform	p. 63
Background databases	p. 65
European open LCA data network	p. 66
ÖKOBAUDAT	p. 66
eLCA, an LCA tool for buildings	p. 68
LCA - a European approach	p. 71
Environmental data for steel construction products	p. 72
The recycling potential concept	p. 72
EPD for structural steel	p. 78
EPD for hot-dip galvanized structural steel	p. 80
EPDs for profiled sheets and sandwich panels	p. 81
KBOB-recommendation - LCA database from Switzerland	p. 85
KB OB-recommendation as a basis for planning tools	p. 86
Environmental impact assessment within the KBOB-recommendation	p. 87
Environmental impacts of hot-rolled steel products	p. 88
Example using data from the KBOB-recommendation	p. 90
References	p. 93
Sustainable steel construction	p. 97
Environmental aspects of steel production	p. 97
Planning and constructing	p. 99
Sustainability aspects of tender and contracting	p. 99
Sustainable building quality	p. 102
Space efficiency	p. 102
Flexibility and building conversion	p. 105
Design for deconstruction, reuse and recycling	p. 108
Multistorey buildings	p. 117
Introduction	p. 117
Building forms	p. 120
Floor plan design	p. 122
Building height and height between floors	p. 124
Flexibility and variability	p. 124
Demands placed on the structural system	p. 126
Floor systems	p. 128
Columns	p. 132
Innovative joint systems	p. 133
High strength steel	p. 134
Metallurgical background	p. 136
Designing in accordance with Eurocodes	p. 141

Batch hot-dip galvanizing	p. 141
Introduction	p. 141
The galvanizing process	p. 144
Batch galvanized coatings	p. 144
Sustainability	p. 146
Example: 72 years young - the Lydlinch Bridge	p. 150
UPE channels	p. 152
Optimisation of material consumption in steel columns	p. 155
Composite beams	p. 157
Composite beams with moderate high strength materials	p. 159
Examples for high strength composite beams	p. 160
Economic application of composite beams	p. 161
Fire-protective coatings in steel construction	p. 166
Possible ways of designing the fire protection system	p. 166
Fire protection of steel using intumescent coatings	p. 166
The structure of fire-protective coating systems	p. 167
Sustainability of fire-protection systems	p. 168
Building envelopes in steel	p. 171
Energy-efficient building envelope design	p. 171
Thermal performance and air-tightness of sandwich constructions	p. 173
Effective thermal insulation by application of steel cassette profiles	p. 182
Floor systems	p. 190
Steel as key component for multifunctional flooring systems	p. 190
Slimline floor system	p. 197
Profiled composite decks for thermal inertia	p. 203
Thermal activation of steel floor systems	p. 208
Steel decks supporting zero energy concepts	p. 210
Optimisation of multistorey buildings with beam-slab systems	p. 213
Sustainability analyses and assessments of steel bridges	p. 219
State of the art	p. 219
Methods for bridge analyses	p. 224
External effects and external costs	p. 225
Life-cycle assessment	p. 226
Uncertainty	p. 227
Steel construction for renewable energy	p. 229
Sustainability assessment concept	p. 232
Sustainability characteristics	p. 235
References	p. 237
Sustainability certification labels for buildings	p. 247
Major certification schemes	p. 248
DGNB and BNB	p. 249

LEED	p. 256
BREEAM	p. 257
Effect of structural design in the certification schemes	p. 266
Life-cycle assessments and environmental product declarations	p. 266
Risks to the environment and humans	p. 271
Costs during the life cycle	p. 274
Flexibility of the building	p. 277
Recycling of construction materials, dismantling and demolition capability	p. 280
Execution of construction work and building site	p. 284
References	p. 288
Case studies and life-cycle assessment comparisons	p. 289
LCA comparison of single-storey buildings	p. 289
Structural systems	p. 289
LCA information	p. 293
Frame and foundations - structural system	p. 294
Column without foundation - single structural member	p. 298
Girder - single structural member	p. 300
Building envelope	p. 300
Comparison in the operational phase	p. 301
Conclusions for single-storey buildings	p. 303
LCA comparison of low rise office buildings	p. 305
The low rise model building	p. 305
LCA comparison of the structural system	p. 307
LCA comparison of office buildings	p. 310
LCA information	p. 312
Results of the LCA for the building systems	p. 312
Results of the LCA for a reference building	p. 312
Material efficiency	p. 317
Effective application of high strength steels	p. 317
Sustainable office designer	p. 323
Database	p. 325
Example using sustainable office designer	p. 325
Sustainability comparison of highway bridges	p. 331
Calculation of LCC for highway bridges	p. 331
Calculation of external cost for highway bridges	p. 335
Calculation of LCA for highway bridges	p. 338
Additional indicators	p. 342
Sustainability of steel construction for renewable energy	p. 344
Offshore wind energy	p. 344
Digester for biogas power plants	p. 348
Consideration of transport and construction	p. 352

Environmental impacts according to the origin of structural steel products	p. 352
Comparison of expenses for transport and hoisting of large girders	p. 354
References	p. 357
Index	p. 361
