Foreword
Preface
Acknowledgments
List of Abbreviations
Introduction
Introduction to Smart Computing—Approximate Reasoning
The Necessity of Computing in Practice: A Brief Reminder
Practical Problems Generalization and Classification
Learning the Current State of the World
Predicting the Future State of the World
Controlling the Desirable State of the World
Computational Science and Engineering
Key Concepts
Sets
Logic
Probability Theory
Possibility Theory
Interval Analysis
Category Theory
The Unavoidability of Uncertainty in Reality: A Quick Retrospection
Fuzziness
Roughness
Indefiniteness
Relations Underlying the Uncertainties
Measure Theory
Entropy Measurement for Uncertainty—Shannon's Entropy for Classical System
Entropy Measurement for Uncertainty—Fuzzy Entropy
Entropy Measurement for Uncertainty—Rough Entropy
Similarity Measurement for Uncertainty—General Similarity Measure
Similarity Measurement for Uncertainty—Fuzzy Similarity Measure
Smart Computing
Data Analytics
Define Critical Problem and Generate Working Plan
Identify Data Sources
Select and Explore the Data
Clean the Data
Transform, Segment, and Load the Data
Model and Analyse the Data
Interpretation, Evaluation and Deployment
Conclusions
References
