Mathematical Models

Groundwater Contamination

Three dimensional groundwater quality modelling in heterogeneous media p. 3
Boundary element analysis of groundwater contamination problems. A case study p. 13
Seawater intrusion in submarine karst channel of rectangular cross-section p. 21
Transport of contaminants from non-aqueous phase liquid pool dissolution in subsurface formations p. 29
Saline water intrusion in Mexico p. 37
A mathematical model for the study of piezometric variations induced by an impervious wall p. 45
Application of the mixed hybrid finite element approximation in a groundwater flow model: implementation and comparison studies p. 57
Application of the flow modelling for protection of an aquifer from oily pollutant in Czaslaw, Poland p. 65
A model for solute transport following an abrupt pressure impact in nondeformable saturated porous media p. 77
Optimal design of cleanup schemes for groundwater polluted by multiple contaminants p. 85
Contaminant dispersion in isotropic porous media p. 93
Assessment of the effective hydraulic conductivity with a numerical model p. 101

Rivers and Channels

Global climate change effects on water quality in aquatic ecosystems p. 111
Modelling of salt distribution in the Tejo estuary using the QUICK scheme p. 121
Water quality models of the rivers Nalon, Caudal and Nora (Spain) p. 129
Modelling bacteria in the St. Clair River in Sarnia p. 141
Computation of flow and mass transport in channels with composite cross section p. 151

Beach/Coastal Contamination

Bacteria pollution in the Polish coastal zone p. 161
Forecasting the trophic status of Tolo Harbour, Hong Kong p. 169
3-D modelling of pollutant transport in currents p. 175
The dispersion of treated effluent by tide and wind in a stratified bay p. 183
A water quality model to support water management for the Bay of Gdansk p. 191

Sediment/Dissolved Matter Transport

Development of a 3D non cohesive suspended sediment transport model for free surface flows p. 201
A model for the dispersion of suspended matter in surface water bodies p. 209
Modelling of sediment dynamics in the harbour area of Bremen p. 217
Simulation model of sand bar crumbling by inconstant flood at river mouth p. 225
The combination of a random walk method and a hydrodynamic model for the simulation of dispersion of dissolved matter in water p. 235

Sea Pollution
Numerical experiments of wind-wave surface turbulence and Langmuir circulations on the upper mixed layer of natural ecosystems p. 245
Saltwater intrusion in submarine pipes p. 253
Seasonal variations of the temperature of the upper sea layer polluted with petroleum substances: mathematical model DKTz-1C p. 261
A methodology for evaluating the radiological consequences of radioactive effluents released to the aquatic environment in normal operations p. 269
Lakes
Flow and pollutant transport in Lake Chapala, Mexico p. 279
A neural network predictor of benthic community structure in the Canadian waters of the Laurentian Great Lakes p. 287

Data Acquisition/Monitoring/Measurement
Surface Water Quality
A dynamic factor model for forecasting surface water quality p. 297
Laboratory experiments related to the injection of buoyant fluid layers in stratified flows p. 305
Calibration procedures to correct the effect of salinity in the analysis of marine nutrients by automatic continuous flow system p. 313
Estimation of rivers dissolved and suspended loads interpolating methods - accuracy and precision p. 321
Monitoring discharges for performance and compliance p. 329
KRAB system for monitoring and protection of underwater environment p. 337
Analysis of surface waters with different extractive procedures p. 341
Dempster-Shafer reasoning for the biological surveillance of river water quality p. 349
Optical water pollution: concepts, measurement and management p. 357
Water quality and pollutant migration in a stretch of the Po River system p. 365
An approach for solving Danube River water pollution problem p. 373
River pollution monitoring: a case study of the Ruaraka River in Kenya p. 381
Groundwater Quality
Hydrogeological method of ground water protection p. 393
Saltwater intrusion problems in Guzelyurt aquifer p. 401
An advanced monitoring system for the management and protection of groundwater resources p. 409
Laboratory experimental study on the interfacial shear stresses and velocity distribution in arrested saline wedges p. 417
A mathematical model to control groundwater exploitation and pollution in the Tenna Valley p. 425
Remote Sensing/Image Processing
Quantitative remote estimation of phytoplankton pigment in inland waters p. 443
Methodology for a cartographic approach for the assessment of agricultural non point source pollution risk - use of remote sensing and geographical information system p. 451
An investigation in the automated detection of Blue-Green Algae p. 461
Waste Disposal/Wastewater Treatment
A new aspect for evaluating the effects of the tank hydraulic characteristics and wastewater quality on the overall efficiency of a liquid solid separation system

Investigation of flow structures and mixing processes in separation tank models

Prediction of the pollutant concentration field in oxidation ditches

Influence of operation variables on secondary clarification in full scale contact stabilization activated sludge plants

The Menai Strait: environmental design as a fundamental requirement in assessing engineering options

Physical and biological dynamics of sewage outfall plumes in the coastal region: an integrated observational approach

Depth-dependence of Enterococcus inactivation by solar UV in seawater

Environmental and legislative significance of ephemeral concentration peaks in effluent mixing zones

Understanding and managing the environmental effects of waste water discharges to the marine environment

Regulatory policies and their impact on water pollution modelling practice in England and Wales

Chemical and Biological Problems

Agricultural Pollution

A model validation and a monitoring plant for the analysis of agricultural chemical substances transport phenomena at basin scale

Information and decision support system for the management of pollution by fertilizers and pesticides (ISMAP/IDSS)

Solute transport model: irrigation with contaminated wastewater

The impact of pesticides in the North Sea: preliminary results

Modeling the effects of fertilizers on water movement in soils

Nitrate pollution from agricultural activities of a shallow aquifer in Chalkidiki Peninsula, Greece

Heavy Metals

Clean technology approaches in metal enamelling industry

A blueprint for simulating heavy metal transport in soil under dynamic acidic conditions

Heavy metal pollution in seawater and marine sediments off the coast of Gijon (Cantabrian Sea)

Eutrophication

An algal growth model for the Vaal River

Mathematical model of eutrophication in Castellon coast (Spain)

Limnology

Hepatic metallothionein induction in fish (White Sucker, Catostomus commersoni) from the St. Lawrence River

Importance of juvenile life-history strategy to pollutant resistance in the Tilapias: a subfamily of African cichlid fishes

Chemical Problems

Amino acids in water: a case study from the Isle of Arran, Scotland
