Cockpit Design Issues: Realizing the benefits of cognitive engineering in commercial aviation
Human factor regulation - from concept to reality
Towards a classification of state misinterpretation
Assessing error tolerance in flight management systems
The truth is out there: representing uncertainty in advanced navigation and situational awareness displays
An evaluation of weapon aiming symbology for HMDs and HUDs
The cognitive ecology of tunnel-in-the-sky displays
Attentional effects of superimposing flight instruments and tunnel-in-the-sky symbology on the world
The use of quality function deployment to analyze human factors requirements in civil flight deck design
Human centred design process in the advanced flight deck technology project
A distributed cognitive perspective on civil aircraft failure management system design
Air Traffic Control: Basic cognitive processes of air traffic controllers
A cognitive system model for enroute air traffic management
Cognitive re-engineering of enroute air traffic control
Requirements for metrics of aircraft separation and sector capacity
Understanding the controller's picture within an ATM environment
Learning, training and technological innovation in air traffic control
The development of TRACER: a technique for the retrospective analysis of cognitive errors in ATM
Evaluation of a context-sensitive speech recognition system in the air traffic control simulation
Aviation Psychology: Analysis of the pilot's monitoring behaviour using decision trees
Cognitive compatibility for visual warnings in aviation
Extending the 'irrelevant sound effect': the effects of extraneous speech on aviation-related tasks
The Simon effect and responses to aircraft dials
Situation awareness: what do we know now that the "uzz' has gone?
Situation awareness maintenance: an essential component for pilot activity
Team situation awareness
Predictors of pilot learning: control beliefs and achievement goal orientations
Training for the automated task: investigating expertise for modern flight decks
The effects of positive vertical acceleration on mental effort and performance during simulated aerobatics manoeuvres in a centrifuge
The effect of simulator motion on parameter training for F-16 pilots
A multi-dimensional scale to assess aircraft handling qualities
Driver Behaviour: Pay attention, 007! how will future vehicle technology affect drivers of all skill levels?
Information needs and strategies of older drivers for navigation on unfamiliar routes: a methodological approach
Multiple resources and multimodal interface design
The design of in-car speech recognition interfaces for usability and user acceptance
Speed management: targeting the road, vehicle or driver?
Road traffic signs how implicit category knowledge improves learning
Do seat-belts remain effective? a conditioning model and its implications
Driving the aftermath of collision-closed highways: road rage and advanced driver hints
Curve negotiation in the Leeds driving simulator: the role of driver experience
Visual information for driver control: a control theory analysis
The clocking process and time-to-contact estimation under different display conditions
Lights versus flags: a comparative study of signals to racing drivers
Medical Ergonomics: Beyond haptic feedback: human factors and risk as design mediators in a virtual reality knee arthroscopy training system (SKATS)
Decision support in the neonatal intensive care unit: expertise differences in the interpretation of monitored physiological data
Training in medical technology: a study of the in-house training system of nurses at intensive care units
A revised framework for the development of safer work with medical technology: comparing Swedish and Portuguese hospital work environments
Designing the user interface for an infusion pump: an example of cognitive engineering
Training: Durable competence in procedural tasks through appropriate instruction and training
Training of troubleshooting: a structured approach
Modelling the training process: extending the verification and validation of training simulators into the human domain
An evaluation of the benefits of using a PC-based simulator for the training of operational command skills in the fire service
Brief Euler circle instruction as a practical aid for solving on-the-job logical problems
