Infrastructure

Geodetic surveying of railway objects p. 3
Rail head and wheel profile geometry measurement p. 13
Software for railway track irregularity correction using heavy tamping machine p. 23
Optimisation of length of transition curves with vehicle reaction taken into consideration p. 33
In-vehicle application of the "RECTIF" system for curve alignment optimization p. 43
Computer aided railway engineering p. 53

Safety Critical Systems

Safety assessment of Copenhagen driverless automatic mass transit system p. 63
Falls on track detection in public transport by artificial vision p. 73
Obstacle detection in front of automatic trains by linear stereo vision p. 83
Use of computer databases to manipulate safety information p. 93
Developing standards for new technology signal systems for rail transit applications p. 103
Using formal methods for quality assurance of interlocking systems p. 113
Safety case production p. 123
The role of independent safety assessment in managing project risks for new or modified programmable electronic systems for railways p. 133

Planning

Use of computers in planning and execution of infrastructure investment p. 149
The impact of passenger capacity analysis on station design p. 159
The TDG application: an highly interactive tool for railway timetable planning and traffic monitoring p. 167
The GCOST Model for demand estimation p. 177
Railway line capacity planning support model p. 187
Application of computer simulation to rail capacity planning p. 199

Systems Engineering and EMC

Towards a complete systems engineering environment p. 215
The application of systems engineering tools on London Underground p. 225
System engineering approach for London Underground Year 2000 compliance p. 235
A systems approach to solve the locomotive and signalling EMC problem p. 245
Systems engineering and systems integration - the West Rail approach p. 257

Scheduling and Freight Car Distribution

Systems integration and organisational choice p. 269
Crew operation scheduling based on simulated evolution technique p. 277
CREWS: a train scheduling tool p. 287
Improving the Dutch railway services by network-wide timetable simulation p. 299
DYNAMIS: a model for the calculation of running times for an efficient time-table construction p. 309
Ad-hoc planning of timetables for accidents or maintenance sites p. 319
Development of intelligent crew roster management system p. 329
The max-plus algebra approach to railway timetable design p. 339
Designing container yard management systems p. 351
Empty freight car distribution at Swedish State Railways p. 361
Investigation of shunt operation performance of jointless track circuits using a specialised track circuit computer simulation tool p. 371
Vehicle Dynamics and Fatigue
Shape optimization analysis for corrugated wheels p. 383
Simulation of severe wheel-rail wear p. 393
Simulation of acoustical properties of rail cars p. 403
Power Supply and Traction
A study to estimate effective coefficient of regenerative energy in electric railway p. 413
TTS/SIMON Power Log -- a simulation tool evaluating electrical train power supply systems p. 427
The result of simulation on response of a pole with a string applied at the top end to vibrational force applied to its base p. 437
Mechatronic engineering as one facet of CAPE p. 447
Simulation and analysis of current distribution on DC electric multiple-units with bus line p. 459
Evaluation of power feeding systems for regenerative trains p. 469
Computer aided design tool for the study of electric traction fixed installations and train operation p. 479
Short circuit analysis for traction power supply system of new concept guided busway p. 489
Statistical and probabilistic methods applied to dc traction system supply p. 501
Traffic Control
Delay analysis for train operation p. 513
Simulation of the operation of personal rapid transit systems p. 523
Malmbanan traffic simulations: investments and capacity allocation p. 533
An analytical model for the calculation of the capacity of lines, junctions and station tracks p. 543
Results of the implementation of an optimal control system in an integrated control centre for metro lines p. 553
Computer-aided methods for railway operation conflict solving p. 563
An optimal traffic regulation method for metro type railways based on passenger oriented traffic evaluation p. 573
An evaluation of algorithms and systems for Computer-Aided Train Dispatching p. 585
Constraint programming for real-time train circulation management problems in railway nodes p. 597
State of the art computer application to railway traffic control and automation p. 607
Centralised traffic control centres p. 617
Automatic conflict detection and advanced decision support for optimal usage of railway infrastructure: purpose and concepts p. 629

Locomotive asset management: integration of GPS, mobile telemetry and GIS technologies p. 639

Modelling and simulation of the European Train Control System for test case generation p. 649

Modelling and simulation of the European Train Control Satellite based locating for guided traffic p. 659

A model for schedule optimisation in an intercity transport system p. 669

Maintenance

Computerisation of rail vehicles maintenance systems p. 683

Computer aided maintenance systems for railway applications p. 693

Communications and control system for fleet maintenance management of the DBAG locomotive BR101 p. 703

Remote control monitoring into the next millennium p. 715

Designing a maintenance tool for high-speed signalling p. 723

Ecotrack: a tool for track maintenance and renewal managers p. 733

Electronic interlocking maintenance using modern computers p. 743

Ticketing

Contactless smart card AFC trials in East Japan Railway p. 753

The concept and a trial operation of multipurpose electronic ticket in Japan p. 761

Multi Train Simulators

Hybrid Petri nets as a new formalism for modelling railway systems p. 773

A multi-train movement simulator with moving block signalling p. 783

A train operating method with real-time adaptability to performance variations of rolling stock p. 793

Experimental validation of propagation models for radiocommunications applications in industrial environments p. 805

Pantograph and Catenary

Panda: a friendly CAD tool for pantograph design and testing p. 817

Virtual acquisition system for experimentation in 'Pantograph-Catenary Interaction' p. 827

Preliminary field testing of a servocatautated pantograph p. 837

High speed railways: pantograph and overhead line modelling and simulation p. 847

Computerised systems for catenary geometry assessment p. 857

Dynamic behaviour of pantographs due to different wear situations p. 869

Modelling of electromagnetic emission from catenary-pantograph sliding contact p. 881

Arcing in AC railways: a mathematical approach p. 891

Human Interface and Decision Support

Automatic conflict detection and advanced decision support for optimal usage of railway infrastructure: prototyping and test results p. 907
