

Preface	p. v
List of Contributing Authors	p. viii
Introduction to energy storage: market analysis, raw materials, recycling, new concepts	p. 1
Analysis of the emerging battery market and outlook	p. 1
Global battery markets	p. 1
LIB demand forecasts	p. 3
LIB production capacity announcements	p. 3
Regional distribution of cell production	p. 4
LIB demand by applications	p. 4
Developments, requirements, and future challenges across the segments EV, ESS, 3C	p. 5
Assessment of chemical elements for new battery concepts	p. 7
Parameters for assessment	p. 8
Conclusions	p. 14
References	p. 14
Fundamental principles of battery design	p. 17
Nernst equation	p. 20
The Daniell cell	p. 23
Reactions at electrified interfaces	p. 24
Diffusion and migration in crystals	p. 26
Crystallographic, crystal chemical, and crystal physical peculiarities	p. 28
Classification of battery applications and types	p. 34
References	p. 37
Battery concepts: The past, the present, and research highlights	p. 41
The past	p. 41
The present	p. 45
Flow accumulator	p. 45
Lead-acid accumulator	p. 47
Lithium ion accumulator	p. 47
Lithium-iron sulphide battery	p. 49
Lithium-sulphur and sodium-sulphur accumulator	p. 49
Metal fluoride accumulator	p. 51
Metal-air battery	p. 52
Mercury battery	p. 52
Molten salt accumulator	p. 53
Nickel-cadmium accumulator	p. 54
Nickel-metal hydride accumulator	p. 55
Silver oxide battery and accumulator	p. 56
Zinc-manganese oxide batteries	p. 57
Research highlights	p. 58
High-valent metal batteries	p. 58

3D printed cell	p. 61
Hybrid accumulator/fuel cell	p. 62
Liquid metal accumulator	p. 63
Metal-air accumulator	p. 64
Paintable accumulator	p. 65
Super-iron accumulator	p. 65
Tin-sulphur-Uthium accumulator	p. 66
Virus-enabled electrodes	p. 66
Water accumulator	p. 67
Conclusion and outlook	p. 68
References	p. 68
Battery Materials	p. 75
Computational analysis and identification of battery materials	p. 75
Introduction	p. 75
Voronoi-Dirichlet partitioning	p. 81
Bond valence methods	p. 92
Density functional modelling and the materials project	p. 100
Molecular dynamics	p. 110
Summary	p. 113
References	p. 114
Electrodes: definitions and systematisation - a crystallographers View	p. 123
Definitions	p. 124
Systematisation	p. 128
Categorisation	p. 134
Summary	p. 136
References	p. 136
Nanostructured anode materials	p. 138
Introduction	p. 139
Intercalation/Deintercalation materials	p. 141
Alloy/de-alloy materials	p. 147
Conversion materials	p. 152
Conclusions	p. 154
References	p. 155
Modification of cathode materials for Li batteries	p. 157
Introduction	p. 157
Surface coating	p. 158
Doping	p. 159
Summary	p. 161
References	p. 162
Positive electrodes based on Ion-implanted SrTiO <sub>3</sub>	p. 166
Introduction	p. 167

Synthesis and structural characterization of SrTiO <sub>3</sub> single crystal O <sub>2</sub> /p <sub>168</sub> electrodes	
Oxygen diffusion and defect chemistry in strontium titanate	p. 169
Oxygen solid electrolyte coulometry on ion-implanted SrTiO <sub>3</sub> single crystals	p. 170
Summary	p. 172
References	p. 173
Separators and electrolytes for rechargeable batteries: Fundamentals and perspectives	p. 174
Introduction	p. 175
Fundamentals and categorization	p. 176
Solid electrolytes	p. 179
Ionic liquids	p. 202
Conclusion	p. 208
References	p. 209
Safer electrolyte components for rechargeable batteries	p. 220
Introduction	p. 221
Components for lithium battery electrolytes	p. 224
Electrolyte confinement in polymer hosts	p. 227
Electrolytes based on ionic liquid media	p. 230
Electrolytes based on polymer media	p. 235
Future trends	p. 243
Acronym glossary	p. 246
References	p. 247
Characterization methods	p. 261
Optical spectroscopy as a tool for battery research	p. 261
Raman spectroscopy	p. 262
Fourier transform infrared spectroscopy	p. 268
UV/Vis spectroscopy	p. 274
Summary	p. 276
References	p. 277
Magnetic resonance spectroscopy approaches for electrochemical research	p. 282
Nuclear magnetic resonance	p. 282
Electron paramagnetic resonance	p. 298
Conclusion	p. 303
References	p. 306
X-ray photoelectron spectroscopy study of the interaction of lithium with grapheme	p. 311
XPS introduction	p. 312
Fast or time-dependent XPS	p. 314
Disclosing structural properties of a graphene/metal interface by XPS	p. 315
Lithium interaction with a metal-supported graphene monolayer	p. 317
Lithium interaction with few-layer graphene and N-graphene	p. 318
A step forward: XPS under operation conditions	p. 320

Summary	p. 321
References	p. 322
X-ray diffraction methods	p. 324
References	p. 330
Neutron methods for tracking lithium in operating electrodes and interfaces	p. 330
Introduction	p. 331
Neutron diffraction	p. 332
Neutron reflectometry	p. 341
Small-angle neutron scattering	p. 346
Summary	p. 348
References	p. 350
Characterisation of battery materials by electron and ion microscopy techniques: a review	p. 352
Scanning electron microscopy: particle morphology and surface structure	p. 353
Transmission electron microscopy: high-resolution morphology and microstructure	p. 356
Chemical information and analytical electron microscopy	p. 361
Focused ion beam system (FIB)	p. 366
Overall and lithium specific challenges	p. 374
Summary	p. 380
References	p. 380
Oxygen solid electrolyte coulometry (OSEC)	p. 383
References	p. 385
Electrochemical analytical methods	p. 385
Electrochemical cell	p. 387
Cell components and their conductivity	p. 388
Measurement set-up	p. 389
Open circuit potential measurement	p. 390
Potentiostatic cycling	p. 391
Galvanostatic cycling	p. 392
Cyclic voltammetry	p. 393
Electrochemical impedance spectroscopy	p. 394
Summary and outlook	p. 397
References	p. 397
Applied battery diagnosis	p. 399
Impedance spectroscopy as a tool for applied battery diagnosis	p. 399
SoC determination	p. 400
Impedance-based temperature detection	p. 402
Battery degradation analysis	p. 404
Summary	p. 405
References	p. 406
Index	p. 409
