Preface

List of contributing authors

Structural and dynamic characterization

Biophysical perspectives of lipid membranes through the optics of neutron and X-ray scattering

X-ray structure analysis of lipid membrane systems: solid-supported bilayers, bilayer stacks, and vesicles

Structural investigations of membrane-associated proteins by neutron reflectometry

Collective dynamics in model biological membranes measured by neutron spin echo spectroscopy

Spontaneous lipid transfer rate constants

Fundamentals of Nuclear Magnetic Resonance spectroscopy (NMR) and its applications

Collective dynamics in lipid membranes

Mapping protein- and peptide-membrane interactions by atomic force microscopy: strategies and opportunities

Imaging the distributions of lipids and proteins in the plasma membrane with high-resolution secondary ion mass spectrometry

Biomimetic, biorelated, or biological systems

Cholesterol in model membranes

Study of mitochondrial membrane structure and dynamics on the molecular mechanism of mitochondrial membrane processes

Monitoring oxygen-sensitive membranes and vitamin E as an antioxidant

Giant vesicles: A biomimetic tool for assessing membrane material properties and interactions

Formation and properties of asymmetric lipid vesicles prepared using cydodextric-catalyzed lipid exchange

Application and characterization of asymmetric-supported membranes

Styrene-maleic acid copolymers: a new tool for membrane biophysics

Molecular dynamics - simulation and theory

On the origin of "Rafts": The plasma membrane as a microemulsion

Combining experiment and simulation to study complex biomimetic membranes

Simulations of biological membranes with the Martini model

Multiscale modeling of lipid membrane

Molecular dynamics simulation studies of small molecules interacting with cell membranes
