

Preface	p. v
Introduction	p. 1
Natural and urban water cycle	p. 1
Water constituents and water quality	p. 4
Introduction	p. 4
Freshwater resources	p. 4
Microorganisms	p. 6
Abiotic particulate matter	p. 8
Dissolved inorganic water constituents	p. 9
Dissolved organic water constituents	p. 13
Treatment options	p. 15
Introduction and overview	p. 15
Brief characterization of the most important treatment processes	p. 17
Treatment train examples	p. 19
Some basics of hydrochemistry and process engineering	p. 25
Introduction	p. 25
Concentrations and activities	p. 25
Chemical equilibria	p. 27
General aspects	p. 27
Gas-water partitioning	p. 29
Acid/base equilibria	p. 30
Precipitation/dissolution equilibria	p. 33
Redox reactions	p. 35
Sorption/adsorption	p. 38
Reaction kinetics	p. 40
Mass transfer	p. 42
Reactor types	p. 45
Introduction	p. 45
Reactors for homogeneous reactions	p. 46
Reactors for gas-liquid exchange	p. 48
Reactors for liquid-solid transfer	p. 51
Riverbank Filtration	p. 57
Introduction	p. 57
Attenuation processes during riverbank filtration	p. 59
Simplified mass transport modeling under consideration of sorption and biodegradation	p. 60
General assumptions	p. 60
Mass transport influenced by sorption	p. 61
Mass transport influenced by biodegradation	p. 63
Mass transport influenced by sorption and biodegradation	p. 63
Laboratory-scale simulation of riverbank filtration processes	p. 64

Assessment of organic substances with respect to their fate during riverbank filtration	p. 64
Biodegradation	p. 65
Sorption	p. 66
Sorption and biodegradation	p. 68
Special case: NOM breakthrough curves	p. 68
Prediction of model parameters	p. 70
Practical aspects	p. 71
Sedimentation and filtration	p. 75
Introduction	p. 75
Sedimentation	p. 76
Theoretical basics	p. 76
Sedimentation basins	p. 79
Design considerations	p. 80
Filtration	p. 83
Filtration processes: classification and basic principles	p. 83
Filtration mechanisms	p. 86
Depth filtration theory	p. 87
Practical aspects	p. 92
Membrane separation processes	p. 97
Introduction	p. 97
General aspects	p. 100
Operational modes	p. 100
Basic process parameters	p. 101
Fouling and scaling	p. 104
Microfiltration and ultrafiltration	p. 105
Membrane materials	p. 105
Membrane modules and membrane operation	p. 105
Combination of microfiltration/ultrafiltration with other treatment techniques	p. 108
Nanofiltration and reverse osmosis	p. 108
Osmosis and osmotic pressure	p. 108
Mass transfer	p. 110
Concentration polarization and scaling	p. 111
Membrane materials	p. 113
Membrane modules and operation	p. 114
Coagulation and flocculation	p. 117
Introduction and treatment objectives	p. 117
Coagulation	p. 118
Stability of colloidal solutions	p. 118
The zeta potential as a characteristic parameter of the electric double layer	p. 122
Destabilization of colloidal solutions by coagulation processes	p. 123
Coagulants	p. 125

Flocculation	p. 128
Principle	p. 128
Flocculants	p. 129
Kinetic aspects	p. 130
Important influence factors and process conditions	p. 132
General aspects	p. 132
pH value	p. 133
Temperature	p. 135
Type and dosage of coagulants and flocculant aids	p. 135
Preozonation	p. 136
Coagulation/flocculation systems	p. 137
Gas-liquid exchange	p. 141
Introduction	p. 141
Theoretical basics	p. 142
Gas-water partitioning	p. 142
Mass transfer	p. 146
Design equations for counterflow packed columns	p. 149
Reactors for gas-liquid exchange	p. 153
Deacidification	p. 157
Introduction and treatment objective	p. 157
The calco-carbonic equilibrium	p. 157
Basics	p. 157
Tillmans curve and Langelier equation	p. 160
Deacidification processes	p. 163
Treatment options	p. 163
Mechanical deacidification	p. 163
Chemical deacidification	p. 166
Practical aspects	p. 169
Softening and dealkalization	p. 171
Introduction and treatment objectives	p. 171
Hardness of water: definitions and units	p. 172
Softening and dealkalization processes	p. 175
Overview	p. 175
Precipitation processes	p. 176
Acid addition	p. 181
Ion exchange processes	p. 182
Membrane processes	p. 185
Special case: hardening of water	p. 187
Deironing and demanganization	p. 189
Introduction and treatment objectives	p. 189
Basics of deironing and demanganization	p. 192

General considerations and thermodynamic aspects	p. 192
Oxidation mechanisms and kinetic aspects	p. 195
Practical aspects	p. 197
Ion exchange	p. 203
Types and applications of ion exchange resins	p. 203
Selectivity of ion exchange resins	p. 207
Hydrochemical effects of ion exchange processes	p. 208
Practical applications of ion exchange resins	p. 211
General considerations	p. 211
Softening and dealkalization	p. 214
Demineratization	p. 219
Removal of nitrate	p. 223
Removal of humic substances	p. 224
Removal of heavy metals	p. 225
Adsorption	p. 227
Introduction	p. 227
Activated carbons	p. 228
Production	p. 228
Adsorption properties	p. 229
Theoretical basics of the adsorption process	p. 230
Adsorption equilibrium	p. 230
Adsorption kinetics	p. 234
Adsorption dynamics in fixed-bed adsorbers	p. 236
Practical aspects of activated carbon adsorption	p. 240
Application of powdered activated carbon in slurry reactors	p. 240
Application of granular activated carbon in fixed-bed adsorbers	p. 242
Fixed-bed versus batch adsorber	p. 246
Biologically active carbon filters	p. 248
Oxidation processes	p. 251
Introduction	p. 251
Ozonation	p. 252
Oxidation mechanisms	p. 252
Ozone generation and introduction	p. 254
Oxidation byproducts	p. 257
Advanced oxidation processes	p. 259
Definition and classification	p. 259
Mixing of $O_3$ and $H_2O_2$ : the peroxone process	p. 260
$H_2O_2$ and UV irradiation	p. 260
$O_3$ and UV irradiation	p. 261
Photocatalysis	p. 261
Fenton reaction	p. 264

The EE/O concept	p. 265
Disinfection	p. 267
Introduction	p. 267
Disinfection efficiency	p. 268
Disinfection with chlorine	p. 270
Disinfection with combined chlorine	p. 274
Disinfection with chlorine dioxide	p. 275
Disinfection with ozone	p. 277
UV disinfection	p. 277
Appendix: Glossary	p. 281
Nomenclature	p. 291
Abbreviations	p. 301
Bibliography	p. 305
Index	p. 307
