

Preface

List of Contributors

Cell-free Protein Synthesis Systems: Historical Landmarks, Classification, and General Methods

Introduction: Historical Landmarks

Prokaryotic and Eukaryotic Types of Cell-free Expression Systems

Preparing Cell Extracts

Designing Reaction Composition

Providing energy

Enhancing Protein Folding

The Constructive Approach for Cell-free Translation

Introduction

The Process of Protein Synthesis

A Constructive Approach to Protein Synthesis

Conclusion

Functional Genomics Analysis using Sequential Cell-free Protein Synthesis

Introduction

Developing an enabling Technology for Sequential expression Analysis

Demonstrating Functional Genomic Analysis with CFPS

Conclusions and Projections

Cell-free Technology for Rapid Production of Patient-specified Fusion Protein Vaccines

Introduction

Developing the Fusion Protein Construct and the Cell-Free Production Process

Fusion Proteins Raise Protective Antibodies

Conclusions and Projections

Bacterial Cell-free System for Highly Efficient Protein Synthesis

Overview

Introduction

Coupled Transcription-Translation System abased on E. coli Extract

DNA Template Construction.'

Preparation of Cell Extract from E. Coli

Batch-mode Cell-free Reaction

Dialysis-mode Cell-free Reaction

Te4mplate DNA

Reaction Temperature

Surface Area of the Dialysis Membrane

Stable-isotope Labeling for NMR Spectroscopy

Selenomethionine Incorporation for X-Ray Crystallography

Automation

Conclusion

The Use of the Escherichia coli Cell-free Protein Synthesis for Structural Biology and Structural Proteomics

Overview

Introduction

High-throughput Expression by PCR-based Small-scale cell-free Protein Synthesis

Fully Automated Protein Production using Middle-scale Cell-Free Protein Synthesis

NMR Screening

Large-scale Protein Production for Structure Determination

Discussion

The Wheat germ Cell-free Protein Synthesis System

Overview

Development of a Highly Efficient Eukaryotic Cell-free Protein Synthesis System

Completion of Protocols for the Wheat cell-free System

Application to High-throughput Biochemical Annotation of Genetic Information

Conclusion

Cell-free Expression of Integral membrane Proteins for Structural Studies

Overview

Introduction

Specific Characteristics for the Cell-free Expression of Membrane Proteins

Case Studies for the High Level cell-free Expression of Membrane Proteins

Structural Characterization of Cell-free Produced Membrane Proteins

Cell-free Production of Membrane Proteins in the Presence of Detergents

Introduction

Histidine Protein Kinases

Materials and Methods

Results and Discussion

Conclusions

Novel Techniques using PCR and Cell-free Protein Synthesis Systems for Combinatorial Bioengineering

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
