

Foreword	p. xiii
Principles	p. 1
Predictive Power of Biomolecular Simulations	p. 3
Design of Biomolecular Simulations	p. 4
Collective Variables and Trajectory Clustering	p. 6
Accuracy of Biomolecular Simulations	p. 8
Sampling	p. 10
Binding Free Energy	p. 14
Convergence of Free Energy Estimates	p. 16
Future Outlook	p. 20
References	p. 21
Molecular Dynamics-Based Approaches Describing Protein Binding	p. 29
Introduction	p. 29
Protein Binding: Molecular Dynamics Versus Docking	p. 30
Molecular Dynamics - The Current State of the Art	p. 31
Protein-Protein Binding	p. 32
Protein-Peptide Binding	p. 34
Protein-Ligand Binding	p. 36
Future Directions	p. 38
Modeling of Cation- π Interactions	p. 38
Grand Challenges	p. 39
References	p. 39
Advanced Algorithms	p. 43
Modeling Ligand-Target Binding with Enhanced Sampling Simulations	p. 45
Introduction	p. 45
The Limits of Molecular Dynamics	p. 46
Tempering Methods	p. 47
Multiple Replica Methods	p. 48
Endpoint Methods	p. 50
Alchemical Methods	p. 50
Collective Variable-Based Methods	p. 51
Metadynamics	p. 52
Binding Kinetics	p. 57
Conclusions	p. 59
References	p. 60
Markov State Models in Drug Design	p. 67
Introduction	p. 67
Markov State Models	p. 68
MD Simulations	p. 68
The Molecular Ensemble	p. 69
The Propagator	p. 69

The Dominant Eigenspace	p. 70
The Markov State Model	p. 72
Microstates	p. 75
Long-Lived Conformations	p. 77
Transition Paths	p. 79
Outlook	p. 81
Acknowledgments	p. 82
References	p. 82
Monte Carlo Techniques for Drug Design: The Success Case of PELE	p. 87
Introduction	p. 87
First Applications	p. 88
Free Energy Calculations	p. 88
Optimization	p. 88
MC and MD Combinations	p. 89
The PELE Method	p. 90
MC Sampling Procedure	p. 91
Ligand Perturbation	p. 91
Receptor Perturbation	p. 91
Side-Chain Adjustment	p. 93
Minimization	p. 93
Coordinate Exploration	p. 93
Energy Function	p. 94
Examples of PELE's Applications	p. 94
Mapping Protein Ligand and Biomedical Studies	p. 94
Enzyme Characterization	p. 96
Acknowledgments	p. 97
References	p. 97
Understanding the Structure and Dynamics of Peptides and Proteins Through the Lens of Network Science	p. 105
Insight into the Rise of Network Science	p. 105
Networks of Protein Structures: Topological Features and Applications	p. 107
Topological Features and Analysis of Networks: A Brief Overview	p. 107
Centrality Measures and Protein Structures	p. 110
Software	p. 114
Networks of Protein Dynamics: Merging Molecular Simulation Methods and Network Theory	p. 117
Molecular Simulations: A Brief Overview	p. 117
How Can Network Science Help in the Analysis of Molecular Simulations?	p. 118
Software	p. 119
Coarse-Graining and Elastic Network Models: Understanding Protein Dynamics with Networks	p. 120
Coarse-Graining: A Brief Overview	p. 120

Elastic Network Models: General Principles	p. 123
Elastic Network Models: The Design of Residue Interaction Networks	p. 124
Network Modularization to Understand Protein Structure and Function	p. 128
Modularization of Residue Interaction Networks	p. 128
Toward the Design of Mesoscale Protein Models with Network Modularization Techniques	p. 130
Laboratory Contributions in the Field of Network Science	p. 131
Graph Reduction of Three-Dimensional Molecular Fields of Peptides and Proteins	p. 132
Design of Multiscale Elastic Network Models to Study Protein Dynamics	p. 135
Conclusions and Perspectives	p. 140
Acknowledgments	p. 142
References	p. 142
Applications and Success Stories	p. 163
From Computers to Bedside: Computational Chemistry Contributing to FDA Approval	p. 165
Introduction	p. 165
Rationalizing the Drug Discovery Process: Early Days	p. 166
Captopril (Capoten®)	p. 167
Saquinavir (Invirase®)	p. 167
Ritonavir (Norvir®)	p. 168
Use of Computer-Aided Methods in the Drug Discovery Process	p. 168
Ligand-Based Methods	p. 169
Overlay of Structures	p. 169
Pharmacophore Modeling	p. 171
Quantitative Structure-Activity Relationships (QSAR)	p. 172
Structure-Based Methods	p. 173
Molecular Docking - Virtual Screening	p. 175
Flexible Receptor Molecular Docking	p. 179
Molecular Dynamics Simulations	p. 179
De Novo Drug Design	p. 180
Protein Structure Prediction	p. 181
Rucaparib (Zepatier®)	p. 184
Ab Initio Quantum Chemical Methods	p. 185
Future Outlook	p. 186
References	p. 190
Application of Biomolecular Simulations to G Protein-Coupled Receptors (GPCRs)	p. 205
Introduction	p. 205
MD Simulations for Studying the Conformational Plasticity of GPCRs	p. 207
Challenges in GPCR Simulations: The Sampling Problem and Simulation Timescales	p. 208
Making Sense Out of Simulation Data	p. 209
Application of MD Simulations to GPCR Drug Design: Why Should We Use MD?	p. 210
Evolution of MD Timescales	p. 214
Sharing MD Data via a Public Database	p. 216

Conclusions and Perspectives	p. 216
Acknowledgments	p. 217
References	p. 217
Molecular Dynamics Applications to GPCR Ligand Design	p. 225
Introduction	p. 225
The Role of Water in GPCR Structure-Based Ligand Design	p. 226
WaterMap and WaterFLAP	p. 228
Ligand-Binding Free Energy	p. 230
Ligand-Binding Kinetics	p. 233
Supervised Molecular Dynamics (SuMD)	p. 235
Adiabatic Bias Metadynamics	p. 238
Conclusion	p. 241
References	p. 242
Ion Channel Simulations	p. 247
Introduction	p. 247
Overview of Computational Methods Applied to Study Ion Channels	p. 248
Homology Modeling	p. 248
All-atom Molecular Dynamics Simulations	p. 249
Force Fields	p. 250
Methods for Calculation of Free Energy	p. 251
Free Energy Perturbation	p. 251
Umbrella Sampling	p. 251
Metadynamics	p. 252
Adaptive Biased Force Method	p. 252
Properties of Ion Channels Studied by Computational Modeling	p. 253
A Refined Atomic Scale Model of the <i>Saccharomyces cerevisiae</i> K ⁺ -translocation Protein Trk1p	p. 253
Homology Modeling, Docking, and Mutagenesis Studies of Human Melatonin Receptors	p. 254
Selectivity and Permeation in Voltage-Gated Sodium (Na ^v) Channels	p. 254
Study of Ion Conduction Mechanism, Favorable Translocation Path, and Ion Selectivity in KcsA Using Free Energy Perturbation and Umbrella Sampling	p. 257
Ion Conductance Calculations	p. 260
Voltage-Dependent Anion Channel (VDAC)	p. 261
Calculation of Ion Conduction in Low-Conductance GLIC Channel	p. 261
Transient Receptor Potential (TRP) Channels	p. 263
Free Energy Methods Applied to Channels Bearing Hydrophobic Gates	p. 264
Conclusion	p. 270
Acknowledgments	p. 271
References	p. 271
Understanding Allostery to Design New Drugs	p. 281
Introduction	p. 281
Protein Allostery: Basic Concepts and Theoretical Framework	p. 282
The Classic View of Allostery	p. 283

The Thermodynamic Two-State Model of Allostery	p. 283
From Thermodynamics to Protein Structure and Dynamics	p. 285
Entropy in Allostery: The Ensemble Allostery Model	p. 287
Exploiting Allostery in Drug Discovery and Design	p. 288
Computational Prediction of Allosteric Behavior and Application to Drug Discovery	p. 288
Identification of Allosteric Binding Sites Through Structural and Dynamic Approaches	p. 289
Chaperones	p. 291
Kinases	p. 293
GPCRs	p. 294
Conclusions	p. 296
References	p. 296
Structure and Stability of Amyloid Protofibrils of Polyglutamine and Polyasparagine from Molecular Dynamics Simulations	p. 301
Introduction	p. 301
Polyglutamine Protofibrils and Aggregates	p. 303
Investigations of Oligomeric Q ₈ Structures	p. 303
Time Evolution, Steric Zippers, and Crystal Structures of 4 × 4 Q ₈ Aggregates	p. 306
Monomeric Q ₄₀ Protofibrils	p. 308
Amyloid Models of Asparagine (N) and Glutamine(Q)	p. 311
Initial Structures	p. 313
Monomeric PolyQ β Hairpins Are More Stable than PolyN Hairpins	p. 314
N-rich Oligomers Are Most Stable in Class 1 Steric Zippers with 2-by-2 Interdigitation	p. 315
PolyQ Oligomers Are Most Stable in Antiparallel Stranded β Sheets with 1-by-1 Steric Zippers	p. 316
PolyQ Structures Show Higher Stability than Most Stable PolyN Structures	p. 317
Thermodynamic Considerations of Aggregate Formation	p. 318
Summary	p. 319
Acknowledgments	p. 320
References	p. 320
Using Biomolecular Simulations to Target Cdc34 in Cancer	p. 325
Background	p. 325
Families of E2 Enzymes	p. 327
Cdc34 Protein Sequence and Structure	p. 328
Cdc34 Heterogeneous Conformational Ensemble in Solution	p. 329
Long-Range Communication in Family 3 Enzymes: A Structural Path from the Ub-Binding Site to the E3 Recognition Site	p. 330
Cdc34 Modulation by Phosphorylation: From Phenotype to Structure	p. 331
The Dual Role of the Acidic Loop of Cdc34: Regulator of Activity and Interface for E3 Binding	p. 332
Different Strategies to Target Cdc34 with Small Molecules	p. 333
Conclusions and Perspectives	p. 334

Acknowledgments p. 336

References p. 336
