Using inductive logic programming for predicting protein-protein interactions from multiple genomic data
ISOLLE: locally linear embedding with geodesic distance
Active sampling for knowledge discovery from biomedical data
A multi-metric index for euclidean and periodic matching
Fast burst correlation of financial data
A propositional approach to textual case indexing
A quantitative comparison of the subgraph miners MoFa, gSpan, FFSM, and Gaston
Efficient classification from multiple heterogeneous databases
A probabilistic clustering-projection model for discrete data
Collaborative filtering on data streams
The relation of closed itemset mining, complete pruning strategies and item ordering in apriori-based FIM algorithms
Community mining from multi-relational networks
Evaluating the correlation between objective rule interestingness measures and real human interest
A kernel based method for discovering market segments in beef meat
Corpus-based neural network method for explaining unknown words by WordNet senses
Segment and combine approach for non-parametric time-series classification
Producing accurate interpretable clusters from high-dimensional data
Stress-testing Hoeffding trees
Rank measures for ordering
Dynamic ensemble re-construction for better ranking
Frequency-based separation of climate signals
Efficient processing of ranked queries with sweeping selection
Feature extraction from mass spectra for classification of pathological states
Numbers in multi-relational data mining
Testing theories in particle physics using maximum likelihood and adaptive bin allocation
Improved naive Bayes for extremely skewed misclassification costs
Clustering and prediction of mobile user routes from cellular data
Elastic partial matching of time series
An entropy-based approach for generating multi-dimensional sequential patterns
Visual terrain analysis of high-dimensional datasets
An auto-stopped hierarchical clustering algorithm for analyzing 3D model database
A comparison between block CEM and two-way CEM algorithms to cluster a contingency table
An imbalanced data rule learner
Improvements in the data partitioning approach for frequent itemsets mining
On-line adaptive filtering of Web pages
A bi-clustering framework for categorical data
Privacy-preserving collaborative filtering on vertically partitioned data
Indexed bit map (IBM) for mining frequent sequences
STochFS : a framework for combining feature selection outcomes through a stochastic process
Speeding up logistic model tree induction
A random method for quantifying changing distributions in data streams
Deriving class association rules based on levelwise subspace clustering
An incremental algorithm for mining generators representation
Hybrid technique for artificial neural network architecture and weight optimization
