Keeping viruses under control p. 1
Online auctions: notes on theory, practice, and the role of agents p. 2
A unified approach to survivability of connection-oriented networks p. 3
SCTP based framework for mobile Web agent p. 13
An agent-based scheme for efficient multicast application in mobile networks p. 23
An enhanced one way function tree Rekey protocol based on Chinese remainder theorem p. 33
Admission control for multicast routing with quality of service in ad hoc networks p. 44
An efficient on-line job admission control scheme to guarantee deadlines for QoS-demanding applications p. 54
A methodology of resilient MPLS/VPN path management under multiple link failures p. 64
Comparison of hyper-DAG based task mapping and scheduling heuristics for wireless sensor networks p. 74
A Markov-based model to analyze the temporal evolution and lifetime of a sensor network p. 84
Power-efficient seamless publishing and subscribing in wireless sensor networks p. 94
Group-oriented channel protection for mobile devices in digital multimedia broadcasting p. 103
IP traffic load distribution in NGEO broadband satellite networks p. 113
Cross-layer management of radio resources in an interactive DVB-RCS-based satellite network p. 124
Aggressive back off strategy in congestion management algorithm for DBS-RCS p. 136
TCP-peach++: enhancement of TCP-peach+ for satellite IP networks with asymmetrical bandwidth and persistent fades p. 145
Automatic translation of serial to distributed code using CORBA event channels p. 152
Fault tolerant and robust mutual exclusion protocol for synchronous distributed systems p. 162
Exact best-case end-to-end response time analysis for hard real-time distributed systems p. 173
A formal policy specification language for an 802.11 WLAN with enhanced security network p. 183
A generic policy-conflict handling model p. 193
A truly random number generator based on a continuous-time chaotic oscillator for applications in cryptography p. 205
A new cryptanalytic time-memory trade-off for stream ciphers p. 215
SVM approach with a genetic algorithm for network intrusion detection p. 224
Modeling access control lists with discrete-time quasi birth-death processes p. 234
Stochastic bounds on partial ordering: application to memory overflows due to bursty arrivals p. 244
QoS evaluation method in multimedia applications using a fuzzy genetic rule-based system p. 254
Impact of setup message processing and optical switch configuration times on the performance of IP over optical burst switching networks
Charaterizing Gnutella network properties for peer-to-peer network simulation
Computing communities in large networks using random walks
Fame as an effect of the memory size
Keeping viruses under control
Distributed evaluation using multi-agents
Classification of volatile organic compounds with incremental SVMs and RBF networks
Agent based dynamic execution of BPEL documents
A fair multimedia exchange protocol
A pervasive environment for location-aware and semantic matching based information gathering
A Web service platform for Web-accessible archaeological databases
A WSDL extension for performance-enabled description of Web services
A novel authorization mechanism for service-oriented virtual organization
Metrics, methodology, and tool for performance-considered Web service composition
Brazilian software process reference model and assessment method
A secure communication framework for mobile agents
A novel algorithm for the coordination of multiple mobile robots
Multiagent elite search strategy for combinatorial optimization problems
Managing theories of trust in agent based systems
Applying semantic capability matching into directory service structures of multi agent systems
Self-organizing distribution of agents over hosts
Evolutionary design of group communication schedules for interconnection networks
Memetic algorithms for nurse rostering
Discretizing continuous attributes using information theory
System identification using genetic programming and gene expression programming
ARQAQ-learning : autonomous state space segmentation and policy generation
Signature verification using conic section function neural network
Fusion of rule-based and sample-based classifiers - probabilistic approach
Construction of a learning automaton for cycle detection in noisy data sequences
A new trend heuristic time-variant fuzzy time series method for forecasting enrollments
Using GARCH-GRNN model to forecast financial time series
Boosting classifiers for music genre classification
Discriminating biased Web manipulations in terms of link oriented measures
ORF-NT: an object-based image retrieval framework using neighborhood trees

Text categorization with class-based and corpus-based keyword selection

Aligning Turkish and English parallel texts for statistical machine translation

The effect of windowing in word sense disambiguation

Pronunciation disambiguation in Turkish

Acoustic flow and its applications

A DCOM-based Turkish speech recognition system: TREN - Turkish recognition ENgine

Speaker recognition in unknown mismatched conditions using augmented PCA

Real time isolated Turkish sign language recognition from video using hidden Markov models with global features

An animation system for fracturing of rigid objects

2D shape tracking using algebraic curve spaces

A multi-camera vision system for real-time tracking of parcels moving on a conveyor belt

Selection and extraction of patch descriptors for 3D face recognition

Implementation of a video streaming system using scalable extension of H.264

Blotch detection and removal for archive video restoration

Performance study of an image restoration algorithm for bursty mobile satellite channels

Polymorphic compression

Efficient adaptive data compression using fano binary search trees

Word-based fixed and flexible list compression

Effective early termination techniques for text similarity join operator

Multimodal video database modeling, querying and browsing

Semantic load shedding for prioritized continuous queries over data streams

Probabilistic point queries over network-based movements

Effective clustering by iterative approach

Recursive lists of clusters: a dynamic data structure for range queries in metric spaces

Incremental clustering using a core-based approach

Indexing of sequences of sets for efficient exact and similar subsequence matching

An investigation of the course-section assignment problem

Crympix: cryptographic multiprecision library

Optimal control for real-time feedback rate-monotonic schedulers

Graphical user interface development on the basis of data flows specification

Generalizing redundancy elimination in checking sequences

A computable version of Dini's theorem for topological spaces

Improved simulation of quantum random walks
An alternative proof that exact inference problem in bayesian belief networks is NP-hard  p. 947
Recovering the lattice of repetitive sub-functions  p. 956
Erol Gelenbe's career and contributions  p. 966
