Natural-Semantics-Based Abstract Interpretation p. 1
Region Inference for Higher-Order Functional Languages p. 19
An Automata-Theoretic Approach to Presburger Arithmetic Constraints p. 21
Generation of Efficient Interprocedural Analyzers with PAG p. 33
Optimality in Abstractions of Model Checking p. 51
Determining Storage Properties of Sequential and Concurrent Programs with Assignment and Structured Data p. 64
Partitioning Non-Strict Functional Languages for Multi-Threaded Code Generation p. 82
Complementation in Abstract Interpretation p. 100
Polymorphic Recursion and Subtype Qualifications: Polymorphic Binding-Time Analysis in Polynomial Time p. 118
Optimizing Lazy Functional Programs Using Flow Inference p. 136
Termination Analysis for Functional Programs Using Term Orderings p. 154
A Type-Based Analysis for Stack Allocation in Functional Languages p. 172
Control-Flow Analysis and Type Systems p. 189
Effective Flow Analysis for Avoiding Run-Time Checks p. 207
Static Analysis of Communication for Asynchronous Concurrent Programming Languages p. 225
Unification-Free Execution of Well-Moded and Well-Typed Prolog Programs p. 243
Efficient Closure Utilisation by Higher-Order Inheritance Analysis p. 261
System F and Abstract Interpretation p. 279
Call-By-Name CPS-Translation as a Binding-Time Improvement p. 296
Trust in the Lambda Calculus p. 314
LSign Reordered p. 330
Strictness Analysis by Abstract Reduction Using a Tableau Calculus p. 348
Bigloo: a Portable and Optimizing Compiler for Strict Functional Languages p. 366
Beyond Prototype Implementations: Polymorphic Projection Analysis for Glasgow Haskell p. 382
Binding-Time Analysis and Strictness Analysis by Abstract Interpretation p. 400
GENA - a Tool for Generating Prolog Analyzers from Specifications p. 418
Igor: A Tool for Developing Prolog Dataflow Analyzers p. 420
Author Index p. 423
