Basic Techniques and Symbol-Level Recognition - An Overview  p. 1
Comparison of Methods for Detecting Corner Points from Digital Curves  p. 23
Detection of Horizontal Lines in Noisy Run Length Encoded Images: The FAST Method  p. 35
Adding Geometric Constraints to the Vectorization of Line Drawings  p. 49
Quantitative Measurement of the Performance of Raster-to-Vector Conversion Algorithms  p. 57
Form Item Extraction Based on Line Searching  p. 69
Model-Based Analysis of Printed Tables  p. 80
Morphological Approach for Dashed Lines Detection  p. 92
General Diagram-Recognition Methodologies  p. 106
Automatic Learning and Recognition of Graphical Symbols in Engineering Drawings  p. 123
A Hybrid System for Locating and Recognizing Low Level Graphic Items  p. 135
Automatic Interpretation of Chemical Structure Diagrams  p. 148
Knowledge-Based Segmentation for Automatic Map Interpretation  p. 159
Automatic Region Labeling of the Layered Map  p. 179
Verification-Based Approach for Automated Text and Feature Extraction from Raster-Scanned Maps  p. 190
Software System Design for Paper Map Conversion  p. 204
Object-Process Based Segmentation and Recognition of ANSI and ISO Standard Dimensioning Texts  p. 212
A Combined High and Low Level Approach to Interpreting Scanned Engineering Drawings  p. 233
Functional Parts Detection in Engineering Drawings: Looking for the Screws  p. 246
Reconstruction of 3D Solid Model from Three Orthographic Views - Top-Down Approach  p. 260
How to Win a Dashed Line Detection Contest  p. 286
Summary and Recommendations  p. 301
