An interactive folktale system and an authoring system that supports its realization p. 1
Edutainment and serious games - games move into professional applications p. 2
An efficient method for real-time ocean simulation p. 3
The dynamic textures for water synthesis based on statistical modeling p. 12
Constructing a convenient and efficient system for making virtual human accentuated by customized 3D face and body p. 22
The design and implementation of VBS p. 34
View-dependent hierarchical foliage simplification p. 44
A novel optical see-through head-mounted display with occlusion and intensity matching support p. 56
An immersive game using a new interface : the well-tep p. 63
Teaching structured development of virtual reality systems using P-VoT p. 69
VR@Home : an immersive contents creation system for 3D user-generated contents p. 81
A 3D virtual learning environment to foster communication for long term ill children p. 92
Interactive storytelling and gaming environments for museums : The Interactive Storytelling Exhibition Project p. 104
Virtual environments for training : from individual learning to collaboration with humanoids p. 116
Balancing pedagogy, game and reality components within a unique serious game for training Levee inspection p. 128
An operational VR platform for building virtual training environments p. 140
Usability test of immersion for augmented reality based product design p. 152
The development of a virtual cycling simulator p. 162
Visualization learning for visually impaired people p. 171
Interactive composition of 3D faces for virtual characters p. 182
Real-time face pose tracking and facial expression synthesizing for the animation of 3D avatar p. 191
Continuous motion graph for crowd simulation p. 202
LoD-based locomotion engine for game characters p. 214
Using virtual characters as TV presenters p. 225
Grid environment for fabricating custom artificial human bone p. 237
Method of motion data processing based on manifold learning p. 248
A hybrid of plot-based and character-based interactive storytelling p. 260
A context model based on multi-agent in u-learning environment p. 274
Hierarchical Petri-nets model for the design of e-learning system p. 283
The design of coopetitive pedagogy in an integrated Web-based learning model p. 293
An observational study of children interacting with an augmented story book p. 305
Adaptive QoS for educational user created content(UCC) p. 316
ISRST : an interest based storytelling model using rhetorical relations p. 324
Mining learners' behavior in accessing Web-based interface p. 336
Approach comparison on context-aware computing with uncertainty p. 347
Implementation of a Web-based hybrid educational system for enhancing learning efficiency of engineering experiments p. 357
ImaginationTOOLS : made to play music p. 369
PIGP : a pen-based intelligent dynamic lecture system for geometry teaching p. 381
A conceptual framework of affective context-aware interactive learning media p. 391
Ontology based situation analysis and encouragement in e-learning system p. 401
A standardized learning resources retrieval system based on ontology matching p. 411
An integrated virtual environment for active e-learning in theory of computation p. 422
An interactive Bomberman game-based teaching/learning tool for introductory C programming p. 433
A study of virtual manipulative and whiteboard system for improving multi-presentation transformation of geometry problem solving p. 445
Supporting multi-device for ubiquitous learning p. 457
A medical aided system for evaluating crura rehabilitation p. 468
Using metaphors in game-based education p. 477
UML in action : integrating formal methods in industrial design education p. 489
An agent-based adaptable and configurable tutoring module for intelligent virtual environments for training p. 499
A multimodal 3D storytelling system for Chinese children p. 511
Real world edutainment focusing on human-human interaction p. 527
Research on personalized community e-learning recommendation service system by using improved adaptive filtering algorithm p. 539
Efficient embedding of information and knowledge into CSCL applications p. 548
Progressive streaming of irregular meshes using geometry images p. 560
A QoS controller for adaptive streaming of 3D triangular scenes p. 572
Geometry-based muscle forces and inverse dynamics for animation p. 584
Connectivity compression for stripified triangle meshes p. 596
Interpolating solid orientations with a C2-continuous B-spline quaternion curve p. 606
Texture-meshes in digital museum : octree-initialized progressive transmission with feature preservation p. 616
A robust watermarking based on feature points p. 628
Surface animation based on 2D editing p. 638
Kinematic inbetweening for motion animation p. 647
Real-time visualization of tire tracks in dynamic terrain with LOD p. 655
GPU-based real-time deformation with normal reconstruction p. 667
Interpolation to data points in plane with cubic polynomial precision p. 677
ISMAS : an interactive sketch modeling and animation system p. 687
Point sampled surface reconstruction based on local geometry p. 701
An integer incremental AOI algorithm for progressive downloading of large scale VRML environments p. 711
Quantization of colors using median of pixels for color correlogram p. 723
Feature-based texture design using deformation techniques p. 730
Novel method for computer create Van Gogh's oil style painting p. 740
A new approach supporting perception guiding and multi-objective decision making for behavior animation p. 751
3D visual feedback in learning of piano posture p. 763
An automated registration method for range images p. 772
Optimizing the Oriental painting shader for 3D online-game p. 784
NBR : a content-based news video browsing and retrieval system p. 793
An interactive snowboard game in virtual environment p. 801
Relevance feedback and latent semantic index based cultural relic image retrieval p. 812
Controllable multi-party audio/video collaboration based on multicast over CERNET p. 819
A synchronous scaffolding environment for collaborative technical writing p. 829
Data transmission for haptic collaboration in virtual environments p. 841
Message synchronization mechanisms based on waiting period for massively multi-player online games p. 853
An efficient distributed MMOG server using 2layer-cell method p. 864
Filling the gap between middleware and user interactions in a discovery learning environment p. 876
Augmented Galaga on mobile devices p. 888
A unified shader based on the OpenGL ES 2.0 for 3D mobile game development p. 898
Lol-based flow control on low-bandwidth federates p. 904
Dynamic game level generation using on-line learning p. 916
Development of online game-based learning for TRIZ p. 925
A distributed system for augmented reality experiences in science centers and museums p. 936
Federate job mapping strategy in grid-based virtual wargame collaborative environment p. 947
A platform for motivating collaborative learning using participatory simulation applications p. 957
