Preface to the Series

Preface

Problems of Space Immunology

The objectives of space immunology

Methodological principles

Experiments on Isolated Cells in Space

Experiments in weightlessness on isolated human lymphocytes

Exposure on space objects of microbial cells and single-celled organisms

Investigation of Animal Immunity in Experiments on "Kosmos" Biosatellites

The reaction of rat splenocytes to some mitogens after a nineteen-day experiment on the "Kosmos-782" biosatellite

The reactivity of B-lymphocytes in relation to a polyclonal mitogen (E. coli LPS) in rats following a nineteen-day experiment on the "Kosmos-782" biosatellite

The synthesis of immunoglobulins G and the distribution of avidity of specific and nonspecific clones of rat splenic B-lymphocytes in an experiment on the "Kosmos-936" biosatellite

The activity of natural killers, the production of interleukin 2 and the proliferative capacity of T-cells in rats in an experiment on the "Kosmos-1667" biosatellite

Immunological investigation of rats in an experiment on the "Kosmos-1887" biosatellite

Some results of the analysis of the immunity of rats in experiments on biological earth satellites

The Human Immune System In Hypokinesia

The human T-and B-immune system in hypokinesia

Allergological investigations

Conclusion

Immunity in Man during Habitation in a Hermetically Sealed Space

Habitation in a hermetically sealed space with maintenance of the basic indices of the microclimate within the limits of the hygienic norm

Investigations involving the creation of altered microclimate parameters in a hermetically sealed space

The Immune Status of Man with the Modeling of Stress Situations

The results of our own experiments

The neuroendocrine regulation of immune homeostasis

Stress and the immune system

Human Space Flights and the Immune System

Prolonged space flights

Short-term space flights

Analysis of the acute phase of adaptation of the immune system to weightlessness

Discussion of the results of the immunological examination of cosmonauts following short-term and prolonged flights of the "Salyut-4", "Salyut-6", and "Salyut-7" orbital stations
Immunity and Disturbances of Bone Calcium Metabolism with Weightlessness and Hypokinesia p. 160
The problem of osteoporosis during prolonged space flights and hypokinesia p. 160
The immune system and the homeostasis of osseous tissue p. 161
Osteoclast activating factors and complement-mediated synthesis of prostaglandins p. 165
The first results of the study of OAF production in prolonged hypokinesia and in weightlessness p. 170
Approaches to the Prophylaxis and Arrest of Immunological Disturbances during Space Flights in Relation to the Contemporary Status of the Problem of the Correction of Immunity. The Status of the Problem of the Correction of Humoral and Cellular Immunity p. 177
The oligonucleotides as immunomodulators. The ENKAD preparation and the dysnucleotidoses p. 179
Status of the problem of the correction of cell immunity p. 187
Immunocyte activators (inhibitors), cytokine inducers, and mono- and lymphokines p. 188
Approaches to the correction of immunity during stress p. 189
Investigation of the properties of some immunological preparations found on board spaceships p. 192
Results and Prospects of the Study of the Immune System in Space Flights, under Stress, and during Hypokinesia p. 196
References p. 217
Index p. 251
