Cartilage destruction in arthritis and osteoarthritis

Osteoarthritis in the human knee: A dynamic process of cartilage matrix degradation, synthesis and reorganization p. 3

Experimental arthritis models in the study of the mechanisms of articular cartilage loss in rheumatoid arthritis p. 15

Altered structure-function relationships for articular cartilage in human osteoarthritis and an experimental canine model p. 27

Mechanisms of cartilage destruction in joint inflammation p. 49

Immunopathology

Synovial fluid analyses detect and differentiate proteoglycan metabolism in canine experimental models of osteoarthritis and disuse atrophy p. 63

Humoral and cell-mediated sensitivity to cartilage constituents in mice with antigen-induced arthritis p. 69

In vitro and in vivo effects of proteoglycan fractions in adjuvant treated rats p. 75

Are antibodies reactive with chondrocyte proteins enriched in synovial fluids of patients with rheumatoid arthritis? p. 81

Joint loading and cartilage metabolism

The metabolic response of articular cartilage to abnormal mechanical loading induced by medial or lateral meniscectomy p. 89

Effects of long-term running exercise on canine femoral head articular cartilage p. 95

Human and bovine articular cartilage loading measured with a new resistive sensor: Effects of protease degradation and osteoarthritis p. 101

Cytokines and growth factors

Possible role of IL-1 in arthritis: Effects of prostaglandins in the regulation of IL-1 synthesis and actions p. 109

Degradative and repair responses of cartilage to cytokines and growth factors occur via distinct pathways p. 121

Does TGF-[beta] protect articular cartilage in vivo? p. 127

Human rheumatoid synovial cells (HRSC) in culture express TGF-[beta] receptors and are growth stimulated by the factor p. 133

Variable TGF-[beta] receptor expression regulates TGF-[beta] responses of articular chondrocytes p. 139

Proteases and their inhibitors

Proteolytic degradation in human articular cartilage: Its relationship to Stromelysin p. 149

The inhibition of interleukin 1-stimulated cartilage proteoglycan degradation by cysteine endopeptidase inactivators p. 161

The role of alpha-1-protease inhibitor (A1PI) in the inhibition of protease activity in human knee osteoarthritis p. 167

Recombinant human protease nexin-1 prevents articular cartilage-degradation in the rabbit p. 173

Therapeutic modulation of destruction

In vitro effects of NSAIDs and corticosteroids on the synthesis and secretion of interleukin 1 by human osteoarthritic synovial membranes p. 181

Animal models of early osteoarthritis: Their use for the evaluation of potential chondroprotective agents p. 195
The in vivo effects of Naproxen on canine experimental osteoarthritic articular cartilage: Composition, metalloproteinase activities and metabolism

Interleukin-1 and Naproxen down-regulate the expression of IL-1 receptors in cultured human rheumatoid synovial cells (HRSC)

Effect of Rumalon (glycosaminoglycan-peptide) on the articular tissue

Doxycycline protects serum alpha-1-antitrypsin from human neutrophil collagenase

In vitro construction of cells-containing implants for articular cartilage regeneration

Cellular aspects on treatment of cartilage injuries

Human meniscus transplantation

Methodology

In situ hybridisation for Decorin mRNA in rabbit synovium during antigen-induced arthritis

Osteoarthritis in rhesus macaques: Assessment of cartilage matrix quality by quantitative magnetic resonance imaging

A magnetic resonance imaging study of joint degeneration in the guinea pig knee

Development of immortalized human articular cartilage cell lines
