## Acknowledgements

Preface

Angiotensin, ACE Inhibition, and the Renal Circulation: Pathogenesis of Nonmodulation in Essential Hypertension .......................... p. 1

[superscript 99m]Tc-MAG[subscript 3]: Chemistry and Biokinetics of By-Products ................................................................. p. 11

Handling of [superscript 99m]Tc-MAG[subscript 3] in the Kidney ........................................................................................................ p. 17

Preliminary Results Comparing the Extraction Efficiencies of [superscript 131]I-OIH and [superscript 99m]Tc-MAG[subscript 3] in Rat Models of Ischemia, Renal Artery Stenosis, and Ciclosporin Toxicity ......................................................... p. 21

Preliminary Results Comparing OIH, [superscript 99m]Tc-MAG[subscript 3] and Iothalamate in a Rat Model of Renal Ischemia ....................................................................................................................................................... p. 24

[superscript 99m]Tc-MAG[subscript 3]: A Routine Renal Radio-pharmaceutical .................................................................................. p. 28

A Comparative Study of Renal Scintigraphy and Clearance with [superscript 99m]Tc-MAG[subscript 3] and [superscript 123]I-Hippurate in Patients with Renal Disorders ........................................................................................................................................ p. 32

Renal Imaging of Thallium-201 during Cardiac Evaluation ........................................................................................................ p. 36

The Permeability of the Human Bladder to Water Assessed Using Tritiated Water ........................................................................ p. 41

Prolonged Constant Dual-Isotope Infusion for Determination of Renal Function after Water Loading in Hypertensive Diabetic Men .................................................................................................................. p. 45

Simultaneous Measurement of Glomerular Filtration Rate and Effective Renal Plasma Flow Reveals Increased Glomerular Capillary Pressure among Teenage Diabetic Subjects ............................................................................. p. 52

Clinical Evaluation of the Filtration Fraction: Multivariate Statistical Analysis ........................................................................ p. 58

Renal Tubular Reabsorption of Calcium in Primary Hyperparathyroidism ................................................................................... p. 63

Renal Parenchymal Transit Time of [superscript 99m]Tc-MAG[subscript 3] from Factor Analysis and from Region-of-Interest Selection in Hydronephrosis ....................................................................................................... p. 68

Renal Function Studies Using [superscript 99m]Tc-MAG[subscript 3]: Pharmacokinetics and Slope Clearance Determination ............... p. 72

The Impact of Different Urinary Flow Rates on Renoscintigraphy ................................................................................................. p. 74

Renal Function, Urinary Flow Rates and Diuresis Renography ........................................................................................................ p. 77

Validation of a New Method for Quantifying Renal Function ........................................................................................................ p. 82

The Radionuclide Renal Scan: Past, Present and Future .................................................................................................................. p. 87

Abnormal Renal Mobility: Radionuclide Features and Clinical Relevance ........................................................................................ p. 99

The Uses and Interpretation of Modified Diuresis Renography ........................................................................................................ p. 103

Prospective Evaluation of Radionuclide Monitoring in Renal Transplantation ................................................................................ p. 108

Measurements of [superscript 99m]Tc-MAG[subscript 3] Uptake in Renal Transplant Recipients ................................................................. p. 113

The Intrarenal Kinetics of Hippuran in Acute Rejection of Renal Allograft ......................................................................................... p. 123

The Effects of Increased Dialysate Sodium Concentration on Skeletal Muscle and Subcutaneous Blood Flow during Hemodialysis. Dialysate Sodium and Regional Blood Flow ............................................................................................... p. 127
Assessment of Renal Volume in vivo Using SPECT | p. 133
Long-Term Follow-Up of Separate Glomerular Filtration Rate in Partially Obstructed Kidneys | p. 137
Development of Renal Scars after Acute Nephronia in Childhood: A Study of Sequential DMSA Scans | p. 142
Correlation between Scintigraphic Lesions and Renal Scarring in Intravenous Urogram in Children with Normal Relative Uptake of DMSA and Evaluation of Normal Kidney Findings of DMSA Scan | p. 147
Comparison of Conventional Furosemide Diuresis Renography with Direct Intrapelvic Infusion Renography | p. 156
Serial Furosemide Renography in Asymptomatic Hydronephrosis Diagnosed by Ultrasound in utero and Neonatally | p. 161
DMSA Studies in Infants under One Year of Age | p. 166
Paradoxical Increased Glucoheptonate Uptake in Experimental Renovascular Hypertension | p. 170
Captopril-Stimulated Renography versus Renal Vein Renins in Two-Kidney, Two-Clip Hypertension | p. 176
Detection of Renal Artery Stenosis by Means of Captopril Renography with $^{99m}$Tc-DTPA | p. 181
Captopril Renography and Duplex Sonography: Comparison of Two Noninvasive Methods for the Diagnosis and Follow-Up in Renovascular Hypertension | p. 190
Results of Quantification of Frusemide Response in $^{123}$I-Hippuran Renal Studies of Unilateral Renal Artery Stenosis | p. 196
Usefulness of Renal Sequential Scintigraphy for the Evaluation of Antihypertensive Drugs | p. 200
Captopril Radionuclide Test in Renovascular Hypertension. A European Multicenter Study | p. 205
Captopril Scintirenography: A Protocol to Assess Efficacy and Methodology. A Collaborative Study | p. 211
Lasix Captopril Renography in the Diagnosis of Renovascular Hypertension | p. 219
Subject Index | p. 228
