

## Foreword

Wilfried B. Kratzig - A biographical sketch

On the influence of wind turbulence on bridge decks flutter	p. 3
Reduction methods in structural dynamics	p. 19
Realization of multicorrelated random excitations of structures	p. 33
Computation in modified domains as a guide for the assessment of the effects of uncertainty	p. 47
Nonlinear time-domain analysis of line-like structures under multi-correlated wind loading	p. 63
Fatigue of high and slender structures under wind load	p. 77
Numerical simulation for protective design	p. 85
A nonlinear finite macroelement for deep RC beams in dynamic analyses	p. 99
Three-dimensional shell formulation and elements for large deformations	p. 111
Large inelastic strain analysis by multi-layer kinematics	p. 121
Lyapunov exponents for the dynamic stability analysis of mechanical structures	p. 137
The axially loaded cylindrical shell and the issue of imperfection sensitivity	p. 151
The influences of steel relaxation on structural behaviour	p. 167
Developments in the finite element analysis of structural steel connections	p. 183
Non-linear structural analysis of RC structures with reference to EC 2 and DIN 1045 E 2/97	p. 199
Numerical analysis of RC-folded plate structures for general technologies of prestressing and variable loading processes	p. 215
Inelastic material modelling of concrete and computer-aided retrofitting of a damaged RC shell	p. 231
Some trends in computer-aided structural design	p. 249
Mesh generation techniques for sequential and parallel processing	p. 257
Computational methods in structural concrete design - From database to fuzzy logic	p. 277
Computational stochastic mechanics - Aspects of software development and application	p. 287
Recent advances in computational stochastic structural analysis	p. 297
Equivalence in structural mechanics	p. 313
Stochastic search methods in engineering optimization	p. 321
Computer simulation of smokestack blasting using numerical as well as cognitive methods	p. 339
On torsion-bending coupling of three-dimensional beams with finite deformations - Theory and numerical investigations	p. 353
Some applications of artificial neural networks in structural engineering	p. 369
Rolling contact of elastic bodies - Basic aspects of a finite element approach	p. 385
Numerical simulation of the rolling of elastic-plastic solids and heavy sections	p. 401
On the numerical modelling of damage and failure of rock salt	p. 417

Prediction of crack propagation directions under plane normal and shear loading	p. 431
On error estimation and adaptive remeshing techniques for crack simulation problems	p. 443
Computational analysis of some historic domes with emphasis on Hagia-Sophia	p. 457
Reflections on the Polyclastoid and its suitability for the dome of the Dresden Church of our Lady	p. 463
Research in computational structural analysis - Any benefit to practical application?	p. 485
Author index	p. 495
