

Preface	p. xiii
Introduction	p. 1
Origins	p. 1
Objective	p. 2
Advantages of flexures	p. 2
Disadvantages of flexures	p. 3
Goals of flexure design	p. 3
Design considerations	p. 5
References	p. 13
Essentials	p. 15
Overview	p. 15
Basic elasticity	p. 15
Behavior of materials	p. 17
Metals	p. 17
Non-metals	p. 20
Principal stresses and strains	p. 22
Biaxial stress	p. 24
Triaxial stresses	p. 25
Non-principal stresses	p. 26
Plane stress	p. 26
Three dimensional stresses	p. 31
Shear stresses and shear strain	p. 32
Yield criteria	p. 35
Ductile materials failure criteria	p. 36
Fatigue	p. 37
S/N curves	p. 37
Effects of notches	p. 40
Effects of mean stress	p. 42
Damage assessment	p. 42
Bending of symmetric beams	p. 43
The bending equation	p. 43
Deflection of beams	p. 45
Sign convention for bending moments	p. 46
Moment, shear force and rate of loading relationships	p. 48
Singularity functions	p. 49
Torsion	p. 51
Torsion of a prismatic beam of circular cross section	p. 52
Torsion of a prismatic beam of rectangular cross section	p. 53
Mobility	p. 54
References	p. 56

Rigid body dynamics	p. 59
Overview	p. 59
Generalized coordinates	p. 60
Properties of variational operators	p. 64
Commutation	p. 64
Minima of a function	p. 64
Hamilton's principle	p. 66
A simple spring mass system	p. 68
Lateral vibration of a bar	p. 69
Lagrange's equation	p. 71
Rayleigh's dissipation function	p. 74
General use of Lagrange's equation	p. 75
Linear systems theory	p. 75
The simple, single degree of freedom, linear, spring-mass-damper system	p. 75
Some equivalent definitions of a linear system	p. 78
Frequency response functions	p. 79
Measuring the critical damping ratio	p. 82
General linear systems revisited	p. 87
Multi-degree of freedom linear systems	p. 92
Note on the graphical representation of frequency response functions	p. 98
General response function short cuts	p. 100
Rayleigh's approach to the problem of computing generalized frequency response functions	p. 103
Example of a two degree of freedom system	p. 105
Eigen analysis	p. 106
Conservative systems	p. 108
Systems with damping	p. 112
Interpretation of complex eigenvalues and eigenvectors	p. 113
Summary of primary steps in the derivation of the response function of a linear multi-degree of freedom system	p. 114
Example: A series, six mass vibration isolator	p. 115
Results	p. 118
Vibrations and natural frequencies of continuous systems	p. 120
Strings	p. 121
Longitudinal vibrations of a rod	p. 124
Longitudinal vibrations of a clamped-free rod	p. 126
Longitudinal vibrations of a free-free or fixed-fixed rod	p. 126
Longitudinal vibrations of a clamped-free rod with a rigid mass at the free end	p. 127
Lateral vibration of a bar	p. 129
Hinged-hinged beam	p. 130

The free-free or clamped-clamped bar	p. 131
Lateral vibration of bars with a rigid mass attached	p. 134
Cantilever beam with a rigid mass attached at the free end	p. 134
Hinged beam with a central mass, M	p. 135
Vibration of plates	p. 136
Vibrations of a circular plate	p. 136
Free vibration of a circular plate clamped at the perimeter	p. 137
Rayleigh's method applied to a circular plate with a central mass	p. 140
Vibrations of a rectangular plate	p. 145
Free vibrations of a rectangular plate simply supported at the edges	p. 145
Fundamental frequency's of rectangular plates with other boundary conditions	p. 146
Case study I: A simple two degree of freedom flexure mechanism	p. 146
References	p. 151
Flexure elements	p. 153
Overview	p. 153
Leaf type springs	p. 153
The cantilever as a rotary hinge	p. 154
The cantilever hinge subject to an axial compressive force	p. 158
Combined axial and tangential loads	p. 159
Combined axial and tangential loads plus a moment applied to the free end of a simple cantilever	p. 167
Leaf type flexures for parallelogram flexure applications	p. 173
Notch hinge	p. 177
Theoretical considerations	p. 179
The leaf type flexure reconsidered	p. 179
The circular notch hinge	p. 180
Accuracy of stiffness estimates for a notch type hinge	p. 183
The notch hinge of elliptic cross section	p. 185
Compliance's of elliptic hinges in other axes	p. 188
Results	p. 191
Finite element results	p. 191
Other hinge elements	p. 192
The cross strip pivot	p. 193
Center shift of the pivot	p. 198
The cartwheel hinge	p. 199
Torsional stiffness of the cartwheel hinge	p. 201
Center shift of the pivot	p. 202
Stresses in the hinge	p. 203
The cruciform hinge	p. 204
Two axis hinges	p. 206

A simple two axis hinge (y , $[\theta]$)	p. 206
The two beam, two degree of freedom flexure (y , $[\theta]$)	p. 208
The two axis toroidal hinge ($[\theta_x]$, $[\theta_y]$)	p. 211
Case study I: Force sensor for contact probe characterization	p. 213
Toroidal notch type flexure	p. 215
Two, stacked, notch type flexures	p. 217
References	p. 218
Flexure systems	p. 221
Overview	p. 221
The four bar link	p. 222
The simple leaf type rectilinear spring	p. 222
The simple notch type linear spring	p. 226
The virtual center	p. 231
Effect of the drive on the natural frequency	p. 237
Optimal geometry for the rectilinear motion of components on a simple linear spring	p. 237
Simple linear spring mechanisms	p. 238
Effect of axial strains in the flexure supports	p. 242
Combined effects	p. 243
Planar mechanisms	p. 244
Discussion of the simplifying assumptions for reduction of mobility analysis to planar mechanisms	p. 245
Dynamics of ideal planar flexures (some common mechanisms)	p. 251
The compound rectilinear spring	p. 252
The double compound linear spring (including the lever driven spring)	p. 256
A coupled two-axis flexure	p. 259
General model for dynamics of planar flexures	p. 263
Coordinate systems	p. 265
Notation	p. 266
Transformations	p. 268
Case study I: The simple linear spring flexure	p. 274
Comments on general planar analysis	p. 278
General dynamics of flexures	p. 280
Sources of interesting flexure mechanisms	p. 283
References	p. 284
Hinges of rotational symmetry	p. 287
Overview	p. 287
Introduction	p. 287
Coil springs	p. 288
The disc coupling (freedoms $[\theta_x]$, $[\theta_z]$, x)	p. 291
The inner to outer rim disc coupling	p. 293

The outer rim disc coupling	p. 297
Angular stiffness	p. 304
Axial stiffness	p. 306
Torsional stiffness	p. 306
Rotationally symmetric leaf type hinge (axial stiffness of the disc coupling revisited)	p. 308
Axial stiffness and maximum stress calculations for the rotationally symmetric leaf type flexure system	p. 310
Simplified equation for maximum stress	p. 313
Assessment of approximate equations using finite element models	p. 314
The bellows as a flexure element	p. 317
Torsional stiffness of the rectangular bellows	p. 320
Axial stiffness of the rectangular bellows	p. 322
'S' Shaped distortion of the bellows	p. 325
The notch and leaf type hinge applied to couplings of rotational symmetry	p. 326
Case study I: A metrological three-axis translator for constant force profilometry	p. 327
Principle of operation	p. 328
References	p. 331
Levers	p. 335
Overview	p. 335
Introduction	p. 335
Mechanical levers	p. 336
The rigid lever	p. 337
Soft spring--stiff spring attenuation	p. 343
Lost motion	p. 345
Effects of levers on flexure dynamics	p. 352
Case study I: A fine adjustment mechanism for motion attenuation	p. 357
Finite element analysis of the lever flexure	p. 359
Manufacture of the lever using wire electro-discharge machining	p. 368
Case study II: Optical levers, galvanometers and the filar suspension	p. 369
References	p. 372
Manufacturing and assembly considerations	p. 373
Overview	p. 373
Manufacture	p. 374
Conventional machining	p. 374
Electro-discharge machining	p. 379
Plunge electro-discharge machining	p. 379
Wire electro-discharge machining	p. 380
Lithographic etching	p. 381
Flexures produced using microelectronic processing techniques (MEMS)	p. 382

Lithographic etching of copper sheet	p. 383
Electroplating (or electro-forming)	p. 384
Diamond grinding	p. 385
Assembly	p. 388
Assembly of flexures	p. 389
Coupling the actuator to the flexure	p. 393
Flexure mounts	p. 396
Adding damping to flexure systems (extracting energy)	p. 396
Internal friction in solids	p. 396
Adding damping to a flexure	p. 403
Effects of manufacturing tolerance on the stiffness of flexure elements	p. 406
Typical flexure drives	p. 410
Machining and heat treatment of some common flexure materials	p. 414
Steels	p. 415
Beryllium copper	p. 415
References	p. 416
Author index	p. 419
Subject index	p. 423
