

Numerical computation of the marginal distributions of a semi-Markov process	p. 1
Optimal checkpointing interval for task duplication with spare processing	p. 29
Monitoring inter-arrival times with statistical control charts	p. 43
Optimal interval of CRL issue in PKI architecture	p. 67
Discrete-time economic manufacturing quantity model with stochastic machine breakdown and repair	p. 81
Applying accelerated life models to HALT testing	p. 107
A poisson regression model of software quality : a comparative study	p. 131
Measurement of object-oriented software understandability using spatial complexity	p. 155
A quality engineering approach to human factors in design-review process for software reliability improvement	p. 183
Tree-based software quality classification using genetic programming	p. 201
An approach to quantifying process cost and quality	p. 225
Software process improvement activities based on CMM	p. 273
Asymptotic properties of a software reliability growth model with imperfect debugging : a martingale approach	p. 289
A two-level continuous sampling plan for software systems	p. 315
Software reliability analysis and optimal release problem based on a flexible stochastic differential equation model in distributed development environment	p. 339
An extended delayed S-shaped software reliability growth model based on infinite server queuing theory	p. 357
Disappointment probability based on the number of debuggings for operational software availability measurement	p. 373
Optimal random and periodic inspection policies	p. 393
Screening scheme for high performance products	p. 405
Optimal inspection policies for a self-diagnosis system with two types of inspections	p. 417
Maintenance of a cumulative damage model and its application to gas turbine engine of co-generation system	p. 429
An inspection-maintenance model for degraded repairable systems	p. 439
Age-dependent failure interaction	p. 459
