Contents

Section I: Biological Importance of GTPase-Driven Switches

CHAPTER 1

GTPases Everywhere!

H.R. BOURNE. With 5 Figures	3
A. Introduction	3
B. The GTPase Cycle and the Molecular Switch	3
C. Structure of the GTPase Switch	4
D. Primary Structures Identify GTPases with Related Functions	6
E. Uses of the GTPase Switch: Stoichiometric Activation	7
F. Uses of the GTPase Switch: Assembling a Complex	9
G. Other Potential Uses of the GTPase Switch	12
H. Cascades of GTPases	12
I. Perspectives	14
References	14

CHAPTER 2

Proofreading in the Elongation Cycle of Protein Synthesis

E. BERGMANN and F. JURNAK. With 2 Figures	17
A. Introduction	17
B. General Concepts	18
I. Specificity	18
II. Proofreading	20
C. Parameters of Protein Biosynthesis	22
D. EF-Tu-Dependent Kinetic Proofreading	23
E. EF-Tu-Independent Error Correction Mechanisms	26
I. Peptidyl Transfer	26
II. EF-G-Dependent Translocation	26
III. Allosteric Linkage Between A and E Sites	28
F. Summary	28
References	29

CHAPTER 3

A New Look at Receptor-Mediated Activation of a G-Protein

L. BIRNBAUMER. With 1 Figure	31
References	36

CHAPTER 4

Small GTPases and Vesicle Trafficking: Sec4p and its Interaction with Up- and Downstream Elements

P. NOVICK and P. BRENNWALD. With 2 Figures	39
A. Introduction	39
B. The Sec4 Cycle	43
I. A Cycle of Sec4 Localization	43
II. Intrinsic Properties of Sec4	44
III. GTP Binding and Membrane Attachment Are Essential for Sec4 Function	44
IV. GTP Hydrolysis Is Important for Sec4 Function	44
C. Accessory Proteins in the Sec4 Cycle	45
I. A Specific Sec4 GAP Is Present in Yeast and Mammalian Cells	45
II. GDI from Bovine Brain and Yeast Solubilizes Sec4 in a Nucleotide-Specific Fashion	46
III. Suppressors from Yeast and Rat Brain Encode Nucleotide Exchange Proteins	46
D. A Potential Downstream Effector of Sec4 Function: The Sec8/Sec15 Complex	47
References	48

CHAPTER 5

Cytoskeletal Assembly: The Actin and Tubulin Nucleotidases

M.-F. CARLIER and D. PANTALONI. With 1 Figure	53
A. Introduction	53
B. The Nucleotidase Cycle in the Polymerization of Actin and Tubulin	53
C. Elementary Steps in NTP Hydrolysis on Actin Filaments and Microtubules: The Regulation of Polymer Assembly	55
D. Nucleotide and Metal Ion Binding to Actin and Tubulin	57
E. Probing the Nucleotidase Mechanism of Actin and Tubulin using AlF_4^- and BeF_3^- , H_2O	58
F. Conclusions	59
References	60

CHAPTER 6

Dynamin, A Microtubule-Activated GTPase Involved in Endocytosis

R.B. VALLEE, J.S. HERSKOVITS, and C.C. BURGESS. With 3 Figures . . .	63
A. Introduction	63
B. Structure and Enzymatic Properties	63
C. The <i>Drosophila Shibire</i> Gene	66
D. Transfection of Dynamin into Cultured Mammalian Cells	68
References	71

CHAPTER 7

Transmembrane Protein Translocation: Signal Recognition Particle and Its Receptor in the Endoplasmic Reticulum

P.J. RAPIEJKO and R. GILMORE. With 3 Figures	75
A. Introduction	75
B. The Signal Recognition Particle and Its Receptor	75
C. Protein Translocation Across the Rough Endoplasmic Reticulum Requires GTP	76
D. Binding and Hydrolysis of Guanine Ribonucleotides by Signal Recognition Particle and Its Receptor	78
E. Site-Directed Mutagenesis of SR α	79
F. The Sorting and Targeting Functions of Signal Recognition Particle are GTP Independent	80
G. Current Models for GTP Function During Protein Translocation	81
References	83

CHAPTER 8

GTPases and Actin as Targets for Bacterial Toxins

K. AKTORIES and I. JUST	87
A. Introduction	87
B. General Features of ADP-Ribosylating Toxins	87
C. ADP-Ribosylation of Elongation Factor 2 by Diphtheria Toxin and <i>Pseudomonas aeruginosa</i> Exotoxin A	89
I. Introduction	89
II. Diphtheria Toxin	89
III. <i>Pseudomonas aeruginosa</i> Exotoxin A	90
IV. Functional Consequences of the ADP-Ribosylation of Elongation Factor 2	91
D. ADP-Ribosylation of G-Proteins	91
I. Introduction	91
II. Cholera Toxin	91
III. Heat-Labile <i>E. coli</i> Enterotoxins	92

IV. Functional Consequences of the ADP-Ribosylation of G-Proteins by Cholera- and Heat-Labile <i>E. coli</i> Enterotoxins	92
V. Pertussis Toxin	94
VI. ADP-Ribosylation of G _i , G _o , and G _t by Pertussis Toxin	94
E. ADP-Ribosylation of Small GTPases	95
I. Introduction	95
II. C3-Like ADP-Ribosyltransferases	95
III. Functional Consequences of the ADP-Ribosylation of Rho Proteins	97
IV. ADP-Ribosylation of Small GTPases by <i>Pseudomonas aeruginosa</i> Exoenzyme S	99
F. ADP-Ribosylation of Actin	99
I. Introduction	99
II. <i>Clostridium botulinum</i> C2 Toxin	100
III. Other Actin-ADP-Ribosylating Toxins	100
IV. Functional Consequences of the ADP-Ribosylation of Actin	101
G. Perspectives	102
References	102

Section II. Structure of the GTPase Switches

CHAPTER 9

Eukaryotic Translation Factors Which Bind and Hydrolyze GTP

J. CAVALLIUS and W.C. MERRICK. With 2 Figures	115
A. GTPase Factors	115
B. Consensus Sequences of GTPases Factors	117
C. Evolution of EF-1 α	118
D. The EF-Tu Family	122
E. Structures of the EF-Tu Family	126
References	128

CHAPTER 10

Heterotrimeric G-Proteins: α , β , and γ Subunits

H. ITOH and Y. KAZIRO. With 5 Figures	131
A. Introduction	131
B. Mammalian G-Proteins	131
I. α Subunits	131
1. Isolation of cDNAs and Genomic DNAs	131
a) G _{sα}	131
b) G _{iα}	134

c) G_{α}	135
d) $G_{t\alpha}$ and $G_{gust\alpha}$	135
e) $G_{z\alpha}$	136
f) $G_{q\alpha}$ and $G_{12\alpha}$	137
2. Comparison of the Amino Acid Sequences	137
a) P Region	137
b) G' Region	137
c) G Region	138
d) G'' Region	138
e) Cholera Toxin ADP-Ribosylation Site	138
3. Sequence Conservation	139
4. Evolutionary Tree	139
II. $\beta\gamma$ Subunits	139
C. G-Proteins in Lower Eukaryotes	140
I. G-Proteins from <i>Saccharomyces cerevisiae</i>	141
1. Two α Subunits, GPA1 and GPA2	141
2. β and γ Subunits	141
II. G-Proteins from <i>Schizosaccharomyces pombe</i>	144
III. G-Proteins from <i>Caenorhabditis elegans</i>	144
IV. G-Proteins from Plants	144
References	145

CHAPTER 11

Molecular Diversity in Signal Transducing G-Proteins

L. BIRNBAUMER. With 1-Figure	151
A. The α Subunits	151
I. Molecular Diversity	151
II. α Subunit Functions	153
B. The $\beta\gamma$ Dimers	155
References	156

CHAPTER 12

Structural Conservation of Ras-Related Proteins and Its Functional Implications

P. CHARDIN. With 2 Figures	159
A. Introduction: The Discovery of <i>Ras</i> and <i>Ras</i> -Related Genes	159
B. Sequence Comparisons	163
I. The N-Terminal Extension	166
II. The Phosphate-Binding Part	166
III. The Guanine-Binding Part	167
IV. The C-Terminal Extension	168
V. The CaaX Motif	168

C. Evolutionary Relationships	168
I. Construction of a Homology Tree	168
II. Insertions and Deletions	169
III. Estimation of the Number of Ras-Related Proteins in Mammals	170
D. Discussion	171
I. Internal Residues	171
II. External Residues and Potential Targets for Interacting Proteins	171
III. Relation to Other GTPase Families	172
IV. Is There a Conserved Functional Mechanism for All Ras-Related Proteins?	173
References	173

CHAPTER 13

Conformational Switch and Structural Basis for Oncogenic Mutations of Ras Proteins

S.-H. KIM, G.G. PRIVÉ, and M.V. MILBURN. With 5 Figures	177
A. Introduction	177
B. Conformational Switch	178
I. Conformational Differences Between GDP- and GTP-Bound Ras Proteins: Switch I and II Regions	179
II. Conformational Domino Effect and Frozen Dynamic States	183
III. Small Conformational Changes in the Phosphate-Binding Loop, L1	186
C. Structural Basis for Oncogenic Mutations	186
I. Mutations at Gln-61 and the Stabilization of the Transition State of the γ -Phosphate of GTP	186
II. Mutations at Gly-12 and the Stabilization of the Transition State of the γ -Phosphate of GTP	189
III. Residues 12 and 13 Form a Type II β -Turn for Phosphate Binding	189
IV. Mutation at Ala-59 and Switch II Conformation	191
D. Discussion	192
References	193

CHAPTER 14

Structural and Mechanistic Aspects of the GTPase Reaction of H-ras p21

A. WITTINGHOFER, E.F. PAI, and R.S. GOODY. With 3 Figures	195
A. Introduction	195
B. The Structure of the p21-Triphosphate State	195
C. The Structure and Biochemistry of p21 Mutants	198

D. The Kinetic Mechanism of the GTPase Reaction	199
E. The Kinetic Mechanism of the GAP-stimulated GTPase	201
F. GTPase Mechanism	203
G. Arguments For and Against the Proposed Mechanism	204
H. Role of GAP in the Chemical Mechanism	206
I. Conclusion	208
References	208

CHAPTER 15

Analysis of Ras Structure and Dynamics by Nuclear Magnetic Resonance

S.L. CAMPBELL-BURK and T.E. VAN AKEN. With 9 Figures	213
A. Introduction	213
B. NMR Studies of Proteins	214
I. NMR Structure Determination	214
1. NMR Methods: Larger Proteins	214
2. NMR Resonance Assignments: Application to Ras	214
3. Secondary Structure Determination: Application to Ras ..	216
4. Tertiary Structure and Structure Refinement	219
II. Comparison of Solution and Crystal Structures	219
1. Computer Simulation: Ras·GMPPNP Solution Structure ..	220
2. Protein Dynamics	220
C. Comparison of Full length and Truncated Ras Proteins	221
I. Protein Stability: Sample Preparation	221
II. Chemical Shift Differences	222
III. Selective Isotope Enrichment Studies: Site Specific Probes ..	223
1. Identification of C-Terminal Peaks	223
2. Internal Dynamics	223
3. Comparison of Intact Ras·GDP and Ras·GMPPCP	225
D. Comparison of Ras·GTP, Ras·GTP γ S, Ras·GMPPCP and Ras·GDP	226
I. Chemical Shift Differences	226
E. Kinetic Measurements	228
I. Kinetic and Fluorescence Studies	228
II. ³¹ P NMR: Ras·GTP Hydrolysis	228
III. [¹ H- ¹⁵ N]-Edited NMR Spectroscopy: GTP Hydrolysis	230
F. Conclusion	230
References	231

CHAPTER 16

Molecular Dynamics Studies of H-ras p21-GTP

C.K. FOLEY, L.G. PEDERSEN, T.A. DARDEN, P.S. CHARIFSON, A. WITTINGHOFFER, and M.W. ANDERSON. With 3 Figures	235
--	-----

A. Introduction	235
B. Methods	236
C. Results and Discussion	237
I. General Features of the Wild-Type Simulations	237
1. RMS	237
2. Protein-GTP Contacts	238
3. Secondary Structure	239
II. Mechanism of Hydrolysis	239
References	244

Section III: Small Ras – Related GTPases

A. Control of Growth and Differentiation by the Ras Family

CHAPTER 17

The Discovery of *Ras* and Its Biological Importance

R.A. WEINBERG	249
References	256

CHAPTER 18

Oncogenic Activation of *ras* Proteins

G.J. CLARK and C.J. DER. With 1 Figure	259
A. Introduction	259
B. Oncogenic Versions of Cellular <i>ras</i> Genes Detected in Tumor Cells	260
I. Biological Detection of Activating <i>ras</i> Genes	260
II. Direct Detection of <i>ras</i> Mutations in Tumor DNA and RNA	261
III. Polymerase Chain Reaction Based Approaches to Screening Tumors	261
C. Frequent Occurrence of Mutated <i>ras</i> Genes in Human Tumors ..	262
D. <i>ras</i> Activation is Associated with Experimentally Induced Rodent Tumors	267
E. Biological Activities of Oncogenic <i>ras</i> Proteins	268
I. Malignant Transformation of Established Rodent Fibroblast Cell Lines	268
II. <i>ras</i> Requires Cooperation with Other Oncogenes for Transformation of Primary Cells	269
III. Induction of Differentiation and Growth Inhibition by Oncogenic <i>ras</i>	270
IV. Transgenic Mouse Studies Establish <i>ras</i> Oncogenicity	271
F. Structural and Biochemical Consequences of Oncogenic Mutations	271

I. Activating Mutations at Residues 12, 13, or 61 Promote Active, GTP-Complexed <i>ras</i> Formation.....	272
II. Other Activating Mutations Also Perturb the <i>ras</i> GDP-GTP Cycle	272
G. Clinical Implications of Oncogenic <i>ras</i> for Diagnosis and Treatment	274
I. Diagnostic and Prognostic Applications of <i>ras</i> Mutations	274
II. Protein Prenylation: Oncogenic <i>ras</i> Proteins as Targets of Therapy	275
H. Future Questions	276
References.....	277

CHAPTER 19

Dominant Inhibitory *Ras* Mutants: Tools for Elucidating *Ras* Function

L.A. FEIG. With 1 Figure	289
A. Introduction	289
B. Mechanism of Inhibitory Action	290
C. Defining Biochemical Pathways Dependent upon <i>Ras</i> Function ..	293
D. Some Surprises Revealed by Dominant Inhibitory <i>Ras</i> Mutants ..	296
E. Conclusions	298
References.....	298

CHAPTER 20

The Involvement of Cellular *ras* in Proliferative Signaling

D.W. STACEY. With 3 Figures	301
A. Introduction	301
B. The Relationship Between Tyrosine Kinase Oncogenes and Cellular <i>ras</i>	301
I. Neutralizing Anti- <i>ras</i> Antibody	301
II. Inhibition in the Late G1 Phase of the Cell Cycle	302
III. <i>ras</i> and Other Oncogene Classes	302
C. A Model for Proliferative Signal Transduction	302
I. Other Studies Which Support the Model	303
D. Lipids and the Control of <i>ras</i> Activity	304
I. Dependence of Lipid Mitogens upon <i>ras</i>	304
II. Biochemical Effects of Lipids upon <i>ras</i>	305
E. Biochemical Analyses of the Interaction Between <i>ras</i> and Lipids	306
I. Lipids and <i>ras</i> -Related Proteins	306
II. Neurofibromin and Lipid Inhibition	307
III. Production of GAP-Inhibitory Lipids by Mitogen Stimulation	308
IV. Physical Association Between GAP and Lipids	308

V. Mutational Analysis of ras and the Lipid Inhibitory Phenotype	309
VI. Other Studies of Lipids and GAP Activity	310
VII. Tyrosine Kinases and Lipid Metabolism	312
VIII. Model for the Control of Proliferation at the Level of ras Activity	313
F. Cellular Factors Affecting ras Activity	314
I. N17 ras Interferes with the Activation of Cellular ras	314
II. RAS ^T is Preferentially Inhibitory for Oncogenic ras	315
III. Model for Inhibition of ras Activity by Dominant Inhibitory Mutants	316
IV. Biochemical Support for the Idea that RAS ^T Binds an Effector	317
G. Summary	318
References	319

CHAPTER 21

Regulation of Ras-Interacting Proteins in *Saccharomyces cerevisiae*

K. TANAKA, A. TOH-E, and K. MATSUMOTO. With 2 Figures	323
A. Introduction	323
B. Regulation of Ras Activity by Guanine Nucleotides	324
I. Biochemical Properties of Ras	324
II. The <i>CDC25</i> Gene	325
III. <i>IRA1</i> and <i>IRA2</i> Genes	326
C. Regulation of Adenylyl Cyclase by Ras	328
D. Domains of Ras Interacting with Other Proteins	329
E. Conclusions	330
References	330

CHAPTER 22

Lipid Modifications of Proteins in the Ras Superfamily

J.B. GIBBS	335
A. Background	335
B. Farnesylation	336
I. Farnesyl-Protein Transferase	336
II. Function of Farnesylation	338
C. Geranylgeranylation	339
D. Other Modifications	340
I. Proteolysis	340
II. Methylation	341
III. Palmitoylation	341

E. Conclusions	342
References	342

CHAPTER 23

GTPase Activating Proteins

F. McCORMICK. With 4 Figures	345
A. Introduction	345
B. GTPase Activating Proteins for ras p21 Proteins	346
I. GTPase Activating Proteins in <i>Saccharomyces cerevisiae</i>	346
II. GTPase Activating Proteins in <i>Schizosaccharomyces pombe</i>	346
III. GTPase Activating Proteins in <i>Drosophila melanogaster</i>	346
IV. GTPase Activating Proteins in Mammalian Cells	348
C. GTPase Activating Proteins for rap p21's	353
D. GTPase Activating Proteins for rho-Like Proteins	354
E. GTPase Activating Proteins for other small GTPases	355
F. Concluding Remarks	355
References	356

CHAPTER 24

Guanine Nucleotide Dissociation Stimulators

I.G. MACARA and E.S. BURSTEIN. With 3 Figures	361
A. Introduction	361
B. Possible Mechanisms for conversion to the GTP-Bound State	361
C. Nonspecific Guanine Nucleotide Dissociation Stimulators	363
D. Ras-Specific Guanine Nucleotide Dissociation Stimulators	365
I. Mammalian Guanine Nucleotide Dissociation Stimulators	365
II. Yeast Guanine Nucleotide Dissociation Stimulators: <i>CDC25</i> , <i>SCD25</i> and <i>ste6</i>	367
III. A Ras-Specific Guanine Nucleotide Dissociation Stimulator in <i>Drosophila</i> : SOS	368
E. RAB3-Specific Guanine Nucleotide Dissociation Stimulator	369
F. Other Guanine Nucleotide Dissociation Stimulators	370
G. Conclusions	371
References	372

CHAPTER 25

The Biology of Rap

G.M. BOKOCH. With 3 Figures	377
A. Introduction	377
B. Cloning/Isolation of Rap(s)	377

C. Posttranslational Modification of Rap Proteins	378
I. Isoprenylation	378
II. Phosphorylation	379
D. Rap1 Regulatory Proteins	380
I. GTPase Activating Proteins	380
II. GDP/GTP Dissociation Stimulator	380
E. Biological Activities of Rap1 Protein	381
I. Antagonism of Ras by Rap1	381
II. Interaction of Rap1A with the Phagocyte Reduced Nicotinamide Adenine Dinucleotide Phosphate Oxidase	384
F. Conclusion	387
References	388

B. Vesicle Transfer/Vesicle Fusion

CHAPTER 26

GTPases and Interacting Elements in Vesicle Budding and Targeting in Yeast

C. BARLOWE and R. SCHEKMAN. With 2 Figures	397
A. Introduction	397
B. Isolation and Characterization of Secretion Defective Yeast Strains	398
C. Biochemical Analysis of Protein Transport from the Endoplasmic Reticulum to the Golgi Apparatus	399
D. Sar1p Function in Vesicle Formation from the Endoplasmic Reticulum	401
E. Concluding Remarks	404
References	405

CHAPTER 27

Ypt Proteins in Yeast and Their Role in Intracellular Transport

M. STROM and D. GALLWITZ. With 2 Figures	409
A. Introduction	409
B. Ypt Proteins in <i>Saccharomyces cerevisiae</i>	411
I. Ypt1 Protein	411
II. Sec4 Protein	412
III. Ypt3, Ypt6 and Ypt7 Proteins	413
C. Ypt Protein Structure	414
I. Nucleotide Binding	414
II. Effector Region	416
III. C Terminus	416
D. GTPase Activating Proteins for YPT Family Members	417

E. Summary	418
References	418

CHAPTER 28

Compartmentalization of rab Proteins in Mammalian Cells

V.M. OLKKONEN, P. DUPREE, L.A. HUBER, A. LÜTCKE, M. ZERIAL, and K. SIMONS. With 4 Figures	423
A. Subcellular Compartmentalization and Membrane Traffic	423
I. Membrane Trafficking	424
1. Indications for a Role of Sec4/Ypt1/rab GTPases	424
B. Localization of rab Proteins on Subcellular Compartments	425
I. The rab Proteins Associated with the Biosynthetic Route	425
1. Endoplasmic Reticulum and Golgi Apparatus	425
2. The rab3a Protein on Regulated Exocytic Vesicles	426
II. The rab Proteins on Endocytic Compartments	427
1. The rab5 and rab4 Proteins on Early Endosomes	427
2. The rab Proteins on Late Endocytic Compartments	427
III. The Molecular Basis of rab Compartmentalization	428
1. The C-Terminal Modifications	428
2. Role of the C-Terminal Variable Region	428
C. The Function of rab Proteins in Membrane Trafficking	429
I. The Present Model for rab Function	429
II. Experimental Evidence for rab Function in Membrane Trafficking	432
1. The rab1, rab2, and rab9 Proteins are Involved in Transport Steps on the Biosynthetic Route	432
2. The rab3a Protein and Regulated Secretion	433
3. Functional Studies on rab5 and rab4	433
4. Conclusion from the Functional Data	435
D. The Novel rab Proteins	435
I. Why Clone More rab Sequences?	435
II. Subcellular Localization	436
1. Novel Proteins on the Biosynthetic Pathway	436
2. Novel Proteins on Early Endocytic Compartments	436
III. Epithelial-Specific rab Proteins?	438
E. Conclusion	439
References	440

CHAPTER 29

GTPases in Transport Between Late Endosomes and the *Trans* Golgi Network

S.R. PFEFFER. With 3 Figures	447

III. Sorting of Contents	513
D. Regulation of Traffic Through the Constitutive Pathway	514
E. GTPases and Intracellular Membrane Transport	515
I. SAR1	516
II. Trimeric G-proteins	517

III. The ADP-Ribosylation Factor Family	518
IV. The rab Family	520
F. Conclusions	522
References	523

CHAPTER 34

The Biology of ADP-Ribosylation Factors

R.A. KAHN. With 1 Figure	529
A. Introduction	529
B. The ARF Family of Small GTPases	530
I. Structural Definition	530
II. Functional Definition	530
C. ARF Functions in the Yeast, <i>Saccharomyces cerevisiae</i>	532
I. Yeast ARF Genes and Proteins	532
II. Phenotypes of <i>arf</i> Mutants	532
III. Evidence that ARF Is Required in the Secretory Pathway ...	532
D. Biochemical Characterization of ARF Proteins	533
I. ARF Purified from Mammalian Sources is Heterogeneous ..	533
II. ARF Cofactor Activity	533
III. Guanine Nucleotide Binding	534
IV. GTPase Activity	535
V. The Role of Myristoylation	535
VI. Binding of ARF to Lipid Bilayers	536
VII. Evidence that ARF is Required at Several Steps in the Secretory and Endocytic Pathways	536
E. Use of ARF Antibodies	537
I. Abundance of Different ARF Proteins is Quite Variable	537
II. Localization of ARF Proteins in Animal Cells	537
F. ARF as a Regulator of Coat Protein Binding to Membranes	538
I. Brefeldin A Causes Rapid Release of ARF from Golgi Stacks	538
II. An In Vitro Assay for ARF as Regulator of Coat Protein Binding	538
References	539

CHAPTER 35

Molecular Characterization of ADP-Ribosylation Factors

J. MOSS and M. VAUGHAN. With 4 Figures	543
A. Introduction	543
B. Activation of Cholera Toxin by ADP-Ribosylation Factors	544
I. Mechanism of Activation of Cholera Toxin by ADP- Ribosylation Factors	544

II. Guanine Nucleotide-Dependent Association of Cholera Toxin with ADP-Ribosylation Factors	546
III. Activation of <i>Escherichia coli</i> Heat-Labile Enterotoxin by ADP-Ribosylation Factor	546
C. Structure of ADP-Ribosylation Factors	547
I. Deduced Amino Acid Sequences and Gene Structure of ADP-Ribosylation Factors	547
II. Expression of ADP-Ribosylation Factors in Eukaryotic Species	549
D. Hormonal and Developmental Regulation of ADP-Ribosylation Factors	550
E. Physiological Roles for ADP-Ribosylation Factors	551
References	555

C. *rho* and *rho*-Like Proteins

CHAPTER 36

rho and rho-Related Proteins

A.J. RIDLEY and A. HALL. With 5 Figures	563
A. Introduction	563
B. Sequence and Structure	563
C. Expression and Localisation	565
D. Upstream Regulation of rho-Like Proteins	566
I. Nucleotide Exchange	566
II. GTP Hydrolysis	566
E. Downstream Functions of rho-Like Proteins	568
I. Mammalian rho Proteins	568
II. The rac Proteins	570
1. rac and the Actin Cytoskeleton	570
2. rac and the Superoxide Production	571
3. Other rho-Related Proteins	572
F. Conclusions	574
References	574

CHAPTER 37

The Mammalian Homolog of the Yeast Cell-Division-Cycle Protein, CDC42: Evidence for the Involvement of a Rho-Subtype GTPase in Cell Growth Regulation

M.J. HART, D. LEONARD, Y. ZHENG, K. SHINJO, T. EVANS, and R.A. CERIONE. With 4 Figures	579
A. Growth Factor-Coupled Signal Transduction	579

B. Reconstitution of an Epidermal Growth Factor Stimulated Phosphorylation of a 22-kDa GTPase	580
C. Molecular Cloning of the Human Gp/G25K Protein: Identification of this Protein as the Human Homolog of the Yeast Cell Division Cycle Protein CDC42Sc	583
D. Function of CDC42Sc in <i>Saccharomyces cerevisiae</i>	584
E. Possible Involvement of CDC42Hs in Cell Growth Regulation ...	585
I. cDNA Transfection Studies	585
II. CDC42Hs Regulatory Proteins	586
1. CDC42Hs GTPase Activating Protein	586
2. CDC42Hs Guanine Nucleotide Dissociation Stimulator ...	588
3. CDC42Hs Guanine Nucleotide Dissociation Inhibitor	591
References	593

D. Regulation of and by Small GTPases

CHAPTER 38

Role of Rap1B and Its Phosphorylation in Cellular Function:

A Working Model

D.L. ALTSCHULER, M. TORTI, and E.G. LAPETINA. With 4 Figures ...	599
A. Introduction: The Rap Family of Proteins	599
B. Phosphorylation of Rap1b	601
I. Structural Properties	601
1. cAMP-dependent Phosphorylation of Rap1b in Human Platelets	601
2. Phosphorylation of Rap1b by a Neuronal Ca ²⁺ /Calmodulin-dependent Protein Kinase, CaM Kinase Gr ..	602
3. Mutational Analysis of the Protein Kinase A-dependent Phosphorylation Site of Rap1b	603
4. Phosphorylation-dependent Activation of Rap1b: Role of Guanine Nucleotide Dissociation Stimulator	604
II. Physiological Properties: The Platelet Model	604
1. Thrombin-induced Association of Rap1b with Ras-GTPase Activating Protein: Effect of Phosphorylation ...	605
2. Ras-GAP Associates with Phospholipase C γ -1 in Human Platelets	606
III. A Working Model and Open Questions	607
References	609

CHAPTER 39

GDP/GTP Exchange Proteins for Small GTP-Binding Proteins

Y. TAKAI, K. KAIBUCHI, A. KIKUCHI, and T. SASAKI. With 5 Figures ..	613
---	-----

A. Introduction	613
B. Physical Properties of GDP/GTP Exchange Protein	614
C. Two Actions of GDP/GTP Exchange Protein and Requirement of the Posttranslational Processing of Small GTPases for GDP/GTP Exchange Protein Actions	614
D. Substrate Specificity of GDP/GTP Exchange Protein and Functional Cooperation Between Guanine Nucleotide Dissociation Stimulator and Guanine Nucleotide Dissociation Inhibitor	615
E. Activation of <i>smg</i> p21 by Protein Kinases A and G	616
F. The Function of <i>smg</i> Guanine Nucleotide Dissociation Stimulator in Regulating Gene Expression and Cell Proliferation	616
G. The Function of <i>smg</i> Guanine Nucleotide Dissociation Stimulator and <i>rho</i> Guanine Nucleotide Dissociation Inhibitor in Regulating Superoxide Generation	618
H. The Function of <i>smg</i> Guanine Nucleotide Dissociation Stimulator, <i>rho</i> , and <i>rho</i> Guanine Nucleotide Dissociation Inhibitor in Regulating the Actomyosin System	618
I. The Function of <i>smg</i> p25 Guanine Nucleotide Dissociation Inhibitor in Regulating Intracellular Vesicle Transport	620
J. Conclusions	621
References	622

CHAPTER 40

GTP-Mediated Communication Between Intracellular Calcium Pools

D.L. GILL, T.K. GHOSH, A.D. SHORT, J. BIAN, and R.T. WALDRON. With 8 Figures	625
A. Intracellular Ca ²⁺ Signaling Pools	625
I. Nature of Intracellular Ca ²⁺ Pools	625
II. Movements of Ca ²⁺ Induced by Inositol Phosphates	626
III. Intracellular Ca ²⁺ Channels	627
IV. Significance of Ca ²⁺ Within the InsP ₃ -Sensitive Ca ²⁺ Pool ...	629
B. Ca ²⁺ Movements Activated by Guanine Nucleotides	630
I. GTP-Induced Ca ²⁺ Fluxes	630
II. Ca ²⁺ Compartments Sensitive to GTP and InsP ₃	631
III. Distinctions Between GTP- and InsP ₃ -Induced Ca ²⁺ Transport	632
IV. Rationale for the Action of GTP	632
C. Interorganellar Translocation of Ca ²⁺	634
I. Model for GTP-Activated Ca ²⁺ Translocation	634
II. GTP-Activated Ca ²⁺ Transfer into the InsP ₃ -Sensitive Ca ²⁺ Pool	637
III. Isolation of InsP ₃ -Releasable and InsP ₃ -Recruitable Pools ...	637
IV. Functional Organization of Ca ²⁺ -Regulatory Organelles	639

D. G-Proteins and Interorganelle Transfer of Ca^{2+}	642
I. Identification of Possible G-Protein Mediators of Ca^{2+} Transfer	642
II. Conclusions on the Role of G-Proteins	645
References	647

CHAPTER 41

Coupling of ras to the T Cell Antigen Receptor

J. DOWNWARD	651
A. Introduction	651
B. Receptors and Intracellular Signals that Regulate p21^{ras}	651
I. Activation of p21^{ras} in Cells Other than T Lymphocytes	651
II. Activation of p21^{ras} in T Lymphocytes	653
C. GTPase Activating Proteins Regulate p21^{ras} in T Lymphocytes	654
D. Mechanisms of Regulation of ras GTPase Activating Proteins in T Cells	655
E. Function of p21^{ras} in T Lymphocytes	656
References	657

CHAPTER 42

GTPases as Regulators of Regulated Secretion

T.H.W. LILLIE and B.D. GOMPERTS. With 7 Figures	661
A. GTP: A <i>Sine Qua Non</i> for Exocytosis	661
I. Ca^{2+} -Dependent Secretion in Myeloid Granulocytes	661
B. Probing Exocytosis: Permeabilised Cells	662
I. GTP γ S-Induced, Ca^{2+} -Independent Exocytosis	664
II. Ca^{2+} -Induced, GTP-Dependent Exocytosis	664
III. One or Two Effectors?	665
1. Chloride Suppresses and Glutamate Enhances Guanine Nucleotide Sensitivity of Exocytosis	666
IV. Kinetics of Exocytosis	668
1. Mg^{2+} Permits Abrupt Onset	669
2. Mg^{2+} Deprivation Causes Onset Delays	670
V. GTPases Regulate and Modulate Exocytosis in Many Cells and Tissues	670
C. On the Nature of G_E	671
I. The Example of G_S	671
II. The Example of the Monomeric GTPases	671
D. Single Cell Analysis of GTP γ S-Induced Exocytosis	672
E. Two GTPases in Regulated Exocytosis?	674
References	675

CHAPTER 43

**ADP-Ribosylation of Small GTPases by *Clostridium botulinum*
Exoenzyme C3 and *Pseudomonas aeruginosa* Exoenzyme S**

J. COBURN	679
A. Introduction	679
B. Small GTPases	680
C. <i>Clostridium botulinum</i> Exoenzyme C3	680
D. <i>Pseudomonas aeruginosa</i> Exoenzyme S	682
E. Conclusions	684
References	685
Subject Index	689
