Series Preface xiii

Preface xv

1. Leukocyte Adhesion in Inflammation: From Discovery to the Clinic 1

Robert Rothlein and Linda A. Scharschmidt

- | | |
|--|---------------------------------|
| 1. Introduction 1 | 1.3 Renal Transplant 4 |
| 1.1 Preclinical Experimentation 1 | 1.4 Rheumatoid Arthritis (RA) 5 |
| 1.2 Anti-ICAM-1: The Clinical Experience 4 | 2. References 6 |

2. Accessory Receptors: Regulators of the Local Immune Response 9

Stefan C. Meuer

- | | |
|---|--|
| 1. Introduction 9 | 4. The Selectin Family of Accessory Receptors 18 |
| 2. Immunoglobulin Superfamily of Accessory Receptors 11 | 5. CD44 19 |
| 2.1 CD2 13 | 6. CD28 19 |
| 2.2 CD4 15 | 7. Immunopathology of Accessory Receptors 20 |
| 2.3 CD8 15 | 8. Circulating Forms of Accessory Receptors 20 |
| 2.4 CD58 (LFA-3) 16 | 9. Potential Approaches to Specific Immune Modulation 21 |
| 2.5 CD54 (ICAM-1) 16 | 10. References 23 |
| 3. The Integrin Family of Accessory Receptors 17 | |

3. Acute Inflammatory Response: Granulocyte Migration and Activation 29

Scott B. Shappell and C. Wayne Smith

- | | |
|---|---|
| 1. Introduction 29 | 4.3 Cytokine-stimulated Endothelial Cells Activate Neutrophil Motility 36 |
| 2. Adhesion Molecules and Neutrophil Margination at Inflammatory sites 30 | 5. Contributions of Adherence to Trans-endothelial Migration 37 |
| 2.1 L-selectin 30 | 5.1 Specific Adhesion Molecules and Migration toward Chemotactic Gradients 37 |
| 2.2 E-selectin 31 | 5.1.1 CD18 Integrins 37 |
| 2.3 P-selectin (CD62) 32 | 5.1.2 CD11b/CD18 (Mac-1, Mol, CR3) 38 |
| 3. Three Stages in the Process of Leucocyte Extravasation 32 | 5.1.3 CD11a/CD18 (LFA-1) 38 |
| 4. Trans-endothelial Migration 33 | 5.1.4 ICAM-1 (CD54) 39 |
| 4.1 Transmigration in Response to Chemotactic Gradients 35 | |
| 4.2 Transmigration Induced by Cytokine Stimulation of the Endothelium 35 | |

- 5.2 Specific Adhesion Molecules and Migration Induced by Cytokine Stimulation of Endothelial Cells 39
 - 5.2.1 β_2 Integrins 40
 - 5.2.2 CD11c/CD18 (p150,95) 40
 - 5.2.3 ICAM-1 (CD54) 40
 - 5.2.4 E-selectin 41
- 6. Cellular and Molecular Mechanisms Regulating Neutrophil β_2 -Integrin-dependent Adhesion 42
 - 6.1 CD11a/CD18 42
 - 6.2 CD11b/CD18 43
- 7. Integrin-mediated Neutrophil Activation 46
 - 7.1 Adhesion-dependent Respiratory Burst 46
 - 7.1.1 Structure and Regulation of the NADPH Oxidase of Neutrophils 46
 - 7.1.2 Integrin-mediated Adhesion and Activation of the Neutrophil Respiratory Burst 49
 - 7.1.3 Possible Signal Transduction Mechanisms in β_2 -Integrin Mediated Neutrophil Oxidase Activation 52
 - 7.2 Integrin-mediated Adhesion and Neutrophil Degranulation 54
 - 7.3 Enhanced Phagocytosis 55
 - 7.4 Arachidonic Acid Release and Metabolism 56
- 8. References 57

4. Role of Cell Adhesion Molecules in Tumor Progression and Metastasis 71

Steven M. Albelda

- 1. Cell Adhesion Molecules Involved in Tumor Progression and Metastasis 71
 - 1.1 Integrins 72
 - 1.1.1 Structure and Classification 72
 - 1.1.2 Tissue Distribution 72
 - 1.2 Cadherins 73
 - 1.2.1 Structure and Classification 73
 - 1.2.2 Tissue Distribution 73
 - 1.3 Immunoglobulin Superfamily 73
 - 1.3.1 Tissue Distribution 73
 - 1.4 Others 74
- 2. The Metastatic Cascade 74
- 3. The Role of the Specific Cell Adhesion Molecules in Tumor Progression and Metastasis 75
 - 3.1 Integrins 75
 - 3.1.1 Expression of Integrins on Transformed Cell Lines 75
 - 3.1.1.1 Fibroblasts 75
 - 3.1.1.2 Melanocytes 75
 - 3.1.1.3 Epithelial Cells 75
 - 3.1.2 Expression of Integrins on Tumors *in situ* 75
 - 3.1.3 Experimental Studies Linking Integrins to Tumor Invasion and Metastasis 79
 - 3.2 Cadherins 80
 - 3.2.1 Expression of Cadherins on Cell Lines 80
 - 3.2.2 Expression of Cadherins in Tissues and Tumors 80
 - 3.2.3 Experimental Studies Linking Cadherins to Tumor Invasion 81
 - 3.2.4 Summary and Conclusions 81
 - 3.3 Immunoglobulin Superfamily 81
 - 3.3.1 Carcinoembryonic Antigen 81
 - 3.3.2 N-CAM 81
 - 3.3.3 VCAM-1(INCAM110) 82
 - 3.3.4 Others 82
 - 3.4 CD44 82
 - 3.5 The 67-69 kDa Laminin/Elastin Binding Protein 83
 - 3.6 Others 83
 - 3.6.1 Carbohydrates and Lectins 83
 - 3.6.2 Vascular Addressins 83
 - 3.6.3 Intravascular Interactions 84
- 4. Summary and Conclusions 84
- 5. References 85

5. Concepts in Adhesion Regulation 89

Tamas Schweighoffer and Stephen Shaw

- 1. Introduction 89
 - 1.1 Concept of Adhesion Cascade 90
 - 1.2 Prototypic Adhesion Cascades: Leucocyte Interactions with Endothelium 90
- 2. Regulation of Expression of Adhesion Receptors and their Regulators 92
 - 2.1 Introduction - Regulation at the Cellular Level 92

- 2.2 Genomic Organization and Molecular Evolution 93
- 2.3 Transcription/translation 93
- 2.4 Alternate Splicing 94
- 2.5 Post-translational Modification and Processing 94
 - 2.5.1 Combinatorial Association 94
 - 2.5.2 Glycosylation 95
 - 2.5.3 Others 95
- 2.6 Secretory Mechanisms 96
- 3. Regulation of the Function of Adhesion Molecules 96
 - 3.1 Introduction 96
 - 3.2 Trigger 96
 - 3.2.1 Cell-contact Mediated 97
 - 3.2.2 Cytokines and Soluble Factors 97
 - 3.3 Coupling 98
 - 3.4 Mechanisms for Functional Regulation of Adhesion 98
 - 3.4.1 Receptor Clustering/cytoskeletal Association 99
 - 3.4.2 Conformational Changes 99
 - 3.4.3 Regulatory Associations with other Molecules 99
 - 3.4.4 Divalent Cations 100
 - 3.5 Links between Signals and Mechanisms 100
- 4. Signal Exchange as an Integral Part of Adhesion 100
 - 4.1 Cellular Responses Induced by Engagement of Adhesion Molecules 100
 - 4.2 Broad Range of Biochemical Changes as a Result of Adhesion 101
- 5. Termination of Adhesion 101
 - 5.1 Mechanisms which physically alter the Adhesion Molecules 101
 - 5.2 Termination of Biochemical Signals 102
 - 5.3 De-adhesion Associated with Changes in Differentiation State 102
- 6. Summary 102
- 7. Acknowledgements 102
- 8. References 102

6. *Specificity and Expression of Carbohydrate Ligands* 111

John B. Lowe

- 1. Introduction 111
- 2. Oligosaccharides in Lymphocyte Homing 112
- 3. Oligosaccharide-dependent Inhibition of Lymphocyte-PNHEV Interactions 112
- 4. Molecular Cloning Identifies a Carbohydrate Recognition Domain in MEL-14 114
- 5. Functional Correlates of the L-selectin Domain Structure 115
- 6. Expression and Regulation of L-selectin 117
- 7. Oligosaccharide-dependent Cell-adhesion Mediated by E- and P-selectin 118
- 8. E-selectin-dependent Cell Adhesion 119
- 9. Molecular Cloning Identifies Sequence Similarity between E-selectin and the C-type Lectins 119
- 10. Oligosaccharide Ligands for E-selectin 121
- 11. Oligosaccharide Ligands for P-selectin 127
- 12. P-selectin Maintains Structural Similarity to E- and L-selectin 128
- 13. P-selectin is a Cell Adhesion Molecule 128
- 14. Evidence for Oligosaccharide Ligands for P-selectin 129
- 15. Selectin-dependent Leucocyte Rolling, and a Sequential Model for Leucocyte Adhesion and Transmigration 131
- 16. Acknowledgements 133
- 17. References 133

7. *The Role of Cell Adhesion in the Evolution of Inflammatory Arthritis* 141

Nancy Oppenheimer-Marks and Peter E. Lipsky

- 1. Introduction 141
- 2. Histological Features of Rheumatoid Synovium 142
- 3. The Vasculature in Rheumatoid Synovium 143
- 4. Mechanisms of Cell Adhesion during the Infiltration of Inflammatory Cells into Rheumatoid Synovium 143
 - 4.1 Immunoglobulin Superfamily 144
 - 4.2 Selectin Superfamily 147
 - 4.3 Integrin Superfamily 148
 - 4.4 Regulation of Trans-endothelial Migration of Inflammatory Cells 150
 - 4.5 Adhesion Molecule Expression in Rheumatoid Synovitis 152
 - 4.6 Chemokines 153
 - 4.7 The Migration of Specific Populations of T Cells into Rheumatoid Synovium 154
- 5. Therapeutic Strategies Targeting Adhesion Receptors for the Control of RA 155
- 6. Conclusions 155
- 7. References 156

8. *Pathogenesis of Ischemia/Reperfusion: Role of Neutrophil-endothelial Cell Adhesion* 163

Ronald J. Korthuis and D. Neil Granger

1. Introduction 163
2. Neutrophil Recruitment in Post-ischemic Tissues 164
 - 2.1 Quantitation of Neutrophil Influx in Post-ischemic Tissues 164
 - 2.2 Physiological Regulation of Neutrophil/Endothelial Cell Interactions in I/R 165
 - 2.2.1 Hydrodynamic Dispersal Forces in I/R 165
 - 2.2.2 Post-ischemic Leucocyte Capillary Plugging 167
 - 2.2.3 Electrostatic Charge Interactions between Neutrophil and Endothelial Cell Surfaces 167
 - 2.2.4 Chemical Mediators of Ischemic/reperfusion-induced Neutrophil Infiltration 167
 - 2.2.4.1 Platelet Activating Factor 167
 - 2.2.4.2 Arachidonic Acid Metabolites 168
 - 2.2.4.3 Complement 169
 - 2.2.4.4 Reactive Oxygen Metabolites 170
 - 2.2.4.5 Neutrophil-derived Proteins 173
 - 2.2.5 Molecular Determinants of Ischemic/Reperfusion-induced Leucocyte Adherence 174
3. Role of the Neutrophil/Endothelial Cell Adhesion in Post-ischemic Tissue Injury 175
 - 3.1 Ischemia/Reperfusion (I/R) 175
 - 3.2 Circulatory Shock 179
 - 3.3 Transplantation 181
 - 3.4 Cardiopulmonary Bypass 182
 - 3.5 Frostbite Injury 183
4. Mechanisms of Neutrophil-mediated Tissue Injury in I/R 183
5. Summary 184
6. References 184

9. *Lung Inflammation* 191

Craig D. Wegner

1. Introduction 191
2. Microvascular Adhesion: Leucocyte Margination and Diapedesis 192
 - 2.1 Systemic Microvasculature (Post-Capillary Venules): Overview 192
 - 2.2 Pulmonary Microvasculature 194
 - 2.2.1 Unique Capillary System: Adhesion Independent Margination 194
 - 2.2.2 CD18-independent Migration: Alveolar Macrophage Regulated? 194
 - 2.2.3 Arterioles Contribute too! 194
3. Interstitial Migration and Priming 195
4. Epithelium: the Site of Action 195
 - 4.1 Airways 195
 - 4.1.1 ICAM-1 Expression 195
 - 4.1.2 Leucocyte Retention and Activation 195
 - 4.2 Alveoli 196
5. Role of Specific Adhesion Molecules in Inflammatory Lung Disease 197
 - 5.1 Asthma 197
 - 5.1.1 Primate Allergen Inhalation Models 197
 - 5.1.1.1 Induces Airway Hyper-responsiveness 197
 - 5.1.1.2 Late-phase Broncho-obstruction 198
 - 5.1.1.3 Intrinsic/persistent Airway Hyper-responsiveness 199
 - 5.1.1.4 What about Effects on Lymphocytes 199
 - 5.1.2 Supportive Findings in Atopic Humans 199
 - 5.1.3 VLA-4/VCAM-1, IL-4, Th2-Lymphocyte Hypothesis 200
 - 5.2 Acute Respiratory Distress Syndrome (ARDS) 200
 - 5.2.1 Rat Complement Activation Models 200
 - 5.2.2 Remote Neutrophil Activation 201
 - 5.2.3 Pulmonary Oxygen Toxicity 201
 - 5.2.4 Pulmonary Fibrosis 202
 - 5.3 Respiratory Viral Infection/Sarcoidosis Transplantation: Cell Mediated Immunity 202
6. Conclusion 202
7. References 203

10. *Leucocyte-endothelial Adhesion Molecules in vivo: A role in Physiological Functions and Pathophysiological Vasculidities* 209

Lawrence W. Argenbright *and* Thomas C. Noonan

- | | |
|--|--|
| 1. Physiological Interactions between Leucocytes and the Blood Vessel Wall 209 | 2.1 Integrin/ICAM-1 Adhesion 214 |
| 1.1 Selectin-mediated Adhesion 212 | 2.2 Leucocyte-mediated Vascular Damage 216 |
| 2. Inflammation-induced Leucocyte Adhesion 213 | 3. References 220 |

11. *Molecular Interaction of Viruses with Host Cell Receptors* 223

Thomas L. Lentz

- | | |
|--|--|
| 1. Introduction 223 | 10. Inhibition of the Virus-receptor Interaction 237 |
| 2. Virus Entry into Cells 224 | 10.1 Agents Mimicking the VAP (Ligand-mimics) 238 |
| 3. Host Cell Receptors for Viruses 225 | 10.1.1 Anti-receptor Antibodies 238 |
| 3.1 Virus Receptors 225 | 10.1.2 Anti-idiotypic Antibodies 238 |
| 3.2 Modes of Virus Attachment 230 | 10.1.3 Natural Ligands 239 |
| 3.3 Criteria for Identification of Virus Receptors 231 | 10.1.4 Designed Ligand-mimics 239 |
| 4. Viral Attachment Protein (VAP) 232 | 10.2 Agents Mimicking the Receptor (Receptor-mimics) 239 |
| 5. Binding to Receptors through an Intermediate Molecule 232 | 10.2.1 Anti-VAP Antibodies 239 |
| 6. Receptors as Determinants of Viral Tropisms 233 | 10.2.2 Anti-idiotypic Antibodies 240 |
| 7. Conservation of Binding Domains 234 | 10.2.3 Receptors 240 |
| 8. Molecular Mimicry of Ligands by the VAP 235 | 10.2.4 Designed Receptor-mimics 240 |
| 9. Biological Effects of VAP-receptor Interaction 236 | 11. Conclusion 241 |
| | 12. Acknowledgements 241 |
| | 13. References 242 |

12. *Bacterial Adhesins* 253

Soman N. Abraham

- | | |
|---|--|
| 1. Bacterial Adhesins 253 | 3.4 Adherence to Glycoconjugates in Body Fluids 265 |
| 1.1 Type 1 and P Fimbriae 253 | 3.5 Co-aggregation with Other Bacteria 265 |
| 1.1.1 Genetic Organization 254 | 3.6 Adhesion to Foreign Bodies 266 |
| 1.1.2 Structural Organization 255 | 4. Anti-adhesive Therapy 266 |
| 1.1.3 Receptor Binding 257 | 4.1 Active and Passive Immunization against Bacterial Adhesins 266 |
| 1.2 Lipoteichoic Acid and Other Adhesins of <i>Streptococcus pyogenes</i> 258 | 4.2 Use of Receptor Analogues and Lectins 268 |
| 2. Receptor Specificity 259 | 4.3 Microbial Interference 268 |
| 3. Role of Adhesins in Infection 262 | 4.4 Fortification of Mucosal Surfaces 269 |
| 3.1 Adherence to Mucosal Surfaces 262 | 5. Concluding Remarks 269 |
| 3.2 Adherence to Neutrophils 263 | 6. Acknowledgements 269 |
| 3.3 Adherence to Effector Cells Involved in Inflammation 264 | 7. References 269 |

13. *Cell Adhesion Molecules in Host-parasite Interactions* 277

Christian F. Ockenhouse

- | | |
|--|--|
| 1. Introduction 277 | 2.2 Sporozoite Invasion of Hepatocytes 279 |
| 2. Host-parasite Interactions in Human Malaria 279 | 2.2.1 Cell-adhesive Motifs in the CS Protein 280 |
| 2.1 Life Cycle 279 | |

2.3	Erythrocyte Receptors for <i>P. falciparum</i> Merozoites	280	3.2	Promastigote Binding to CR3	286
2.4	Merozoite Counter-receptors	280	3.3	Lipophosphoglycan and gp63 Counter-receptors for CR3	286
2.5	Erythrocyte Receptors and Counter-receptors for <i>P. vivax</i>	281	3.4	Promastigote Binding to CRI	286
2.6	Cyto-adherence of <i>P. falciparum</i> -infected Red Blood Cells	281	3.5	Promastigote Binding to Fibronectin	287
2.6.1	CD36 as a Cyto-adherence Receptor	282	4.	Host-parasite Interactions in American Trypanosomiasis	287
2.6.2	ICAM-1 as a Cyto-adherence Receptor	283	4.1	Fibronectin and Fc Receptors for <i>T. cruzi</i>	287
2.6.3	Thrombospondin as a Cyto-adherence Receptor	284	4.2	Clq Receptors for <i>T. cruzi</i>	287
2.6.4	Malaria Rosette Formation	285	5.	Host-parasite Interactions in Human Amoebiasis	287
3.	Host-parasite Interactions in Human Leishmaniasis	285	5.1	Polysaccharide Adhesion Receptors	287
3.1	Mannosyl/fucosyl Receptor (MFR)	286	5.2	Trophozoite Lectin-like Counter-receptors	288
			6.	Conclusion	288
			7.	References	288
