## CHAPTER 1

### Functional Anatomy of the Kidney

B. KAISLING and J. DØRUP. With 20 Figures .....	1
A. Structural Organization of the Kidney .....	1
I. Microanatomy of the Kidney .....	1
1. Nephron .....	1
2. Cortex .....	4
3. Medulla .....	4
4. Kidney Size .....	6
II. Renal Vasculature .....	6
1. Arteries and Arterioles .....	6
2. Cortical and Medullary Capillary Plexus .....	6
3. Venous Drainage of Cortex and Medulla .....	7
4. Wall Structure of Renal Vessels .....	8
III. Interstitium, Lymphatics and Renal Nerves .....	8
1. Periarterial Interstitium .....	10
2. Peritubular Interstitium .....	10
IV. Renal Corpuscle .....	11
1. Organization .....	11
2. Mesangium .....	12
3. Glomerular Capillaries .....	12
4. Filtration Barrier .....	15
V. Juxtaglomerular Apparatus .....	15
1. Granular Cells .....	16
2. Extraglomerular Mesangium .....	16
3. Macula Densa .....	16
B. General Organization of Renal Epithelia and Correlation with Transport .....	17
I. Polarity of Epithelia .....	17
1. Transport Pathways .....	17
II. Organization of Epithelial Surfaces .....	19
1. Basolateral Domain .....	19
2. Apical Domain .....	20
III. Correlation of Structure with Na <sup>+</sup> Transport Rates .....	21

C. Nephron and Collecting Duct Structure .....	23
I. Proximal Tubule .....	23
II. Loop of Henle .....	26
1. Organization and Histotopography .....	26
2. Intermediate Tubule .....	26
3. Thick Ascending Limb (Straight Distal Tubule) .....	28
4. Macula Densa .....	30
III. Cortical Distal Segments .....	32
1. Structural and Functional Organization .....	32
2. Distal Convolved Tubule .....	35
3. Connecting Tubule .....	37
IV. Collecting Ducts .....	40
1. Organization .....	40
2. Cortical Collecting Duct Cells .....	40
3. Inner Medullary Collecting Duct Cells .....	42
4. Intercalated Cells .....	43
D. Alterations of Morphology in Electrolyte Disturbances .....	44
I. Acute Changes in Transport Rates .....	45
1. Mechanism .....	45
2. Morphological Changes Associated with Acute Changes in Transport Rates .....	45
II. Chronic Alteration of Na <sup>+</sup> Transport Rates .....	46
1. Mechanism .....	46
2. Time Course of Structural Changes .....	46
III. Adaptation of Proximal Tubule .....	47
1. Changes in GFR .....	47
2. Diabetes Mellitus .....	47
3. Reduction of Renal Cell Mass .....	47
IV. Adaptation of Thick Ascending Limb of Henle's Loop .....	47
1. Variation of ADH Plasma Levels .....	48
2. Variation of Protein Intake .....	48
V. Adaptation of Distal Segments and Collecting Duct .....	48
1. Role of Tubular Na <sup>+</sup> Load .....	49
2. Role of Steroid Hormones .....	51
3. Role of Potassium Intake .....	51
4. Structural Changes in Intercalated Cells .....	52
References .....	55

## CHAPTER 2

### Basic Concepts of Renal Physiology

F. LANG and A. BUSCH. With 17 Figures .....	67
A. Introduction .....	67
B. Renal Blood Flow and Glomerular Filtration .....	67
I. Pressures and Resistances in Renal Vascular Segments .....	68

II. Intrarenal Blood Flow Distribution . . . . .	69
III. Permeability-Selectivity of the Glomerular Filter . . . . .	70
IV. Determinants of Renal Glomerular Filtration Rate . . . . .	71
V. Autoregulation of Renal Blood Flow and Glomerular Filtration Rate . . . . .	74
VI. Hormonal Regulation of Renal Blood Flow and Glomerular Filtration . . . . .	75
C. Renal Tubular Transport . . . . .	76
I. Driving Forces for Epithelial Transport . . . . .	76
1. Water Transport . . . . .	76
2. Solvent Drag . . . . .	77
3. Diffusion . . . . .	77
4. Active Transport . . . . .	78
II. Saturability of Epithelial Transport Processes . . . . .	79
1. Michealis-Menten Kinetics . . . . .	79
2. Transport Kinetics of Whole Kidney . . . . .	80
III. Segmental Organization of Renal Epithelial Transport . . . . .	82
1. Proximal Tubule . . . . .	84
2. Loop of Henle . . . . .	87
3. Distal Tubule and Collecting Duct . . . . .	89
IV. Urinary Concentrating Mechanism . . . . .	91
D. Regulation of Renal Water and Electrolyte Excretion . . . . .	93
I. Water . . . . .	93
II. Na <sup>+</sup> . . . . .	95
III. Bicarbonate and Hydrogen Ions . . . . .	96
IV. K <sup>+</sup> . . . . .	98
V. Mg <sup>2+</sup> . . . . .	100
VI. Calcium Phosphate . . . . .	101
References . . . . .	104

CHAPTER 3

**Renal Energy Metabolism**

W.G. GUDER and M. SCHMOLKE. With 7 Figures . . . . .	115
A. Introduction . . . . .	115
B. Mechanisms of Renal ATP Formation . . . . .	115
I. Substrate-Linked ATP Formation . . . . .	117
1. Glycolysis . . . . .	117
2. Other Mechanisms . . . . .	117
II. Oxidative Phosphorylation . . . . .	119
1. Coupling to Oxygen Consumption . . . . .	119
2. Citric Acid Cycle . . . . .	120
C. Metabolic Substrates of Renal Energy Metabolism . . . . .	123
I. Glucose and Lactate . . . . .	123
II. Fatty Acids . . . . .	124

III. Ketone Bodies .....	127
IV. Amino Acids .....	129
V. Substrate Interactions .....	130
VI. Contribution of Individual Substrates to Whole Kidney Energy Turnover .....	130
D. Regulation of ATP in Tubule Cells .....	131
I. Compartmentation .....	131
II. ATP Turnover .....	131
III. Energy-Consuming Mechanisms .....	132
1. Transport ATPases .....	132
2. Metabolic Processes .....	134
E. Interaction of Diuretic Substances with Renal Energy Metabolism .....	134
I. Proximal Tubule .....	134
II. Thick Ascending Limb of Henle's Loop .....	135
III. Collecting Tubule .....	135
References .....	135

## CHAPTER 4

### Discovery and Development of Diuretic Agents

H.-J. LANG and M. HROPOT. With 23 Figures .....	141
A. Introduction .....	141
B. Xanthine Derivatives .....	141
C. Osmotic Diuretics .....	143
D. Mercurial Diuretics .....	144
E. Carbonic Anhydrase Inhibitors .....	145
F. Sulfonamide Diuretics .....	146
I. Benzothiadiazines and Related Compounds .....	146
II. Sulfamoylbenzoic Acid Derivatives .....	148
G. Nonsulfonamide Diuretics .....	151
I. Phenoxyacetic Acid Derivatives .....	151
II. Potassium-Retaining Diuretics .....	151
1. Aldosterone Antagonists .....	151
2. Pteridines and Pyrazine Derivatives .....	152
H. So-called Polyvalent Diuretics .....	153
I. Loop Diuretics with Prolonged Duration of Action .....	153
II. Saluretics with Eukalemic Properties .....	155
III. Diuretics Improving Renal Function: Dopamine Agonists .....	157
IV. Diuretics with Uricosuric Activity .....	157
V. Avoidance of Adverse Effects on Serum Lipids and Blood Glucose .....	159
VI. Diuretics with Predominant Cardiovascular Activity .....	161
I. Aquaretics .....	163

J. New Aspects: Ion Transport Modulators .....	166
References .....	168

## CHAPTER 5

**Metabolism of Diuretics**

W. MÖHRKE and F. ULLRICH. With 19 Figures .....	173
A. Introduction .....	173
B. Biotransformation .....	173
C. Patterns of Biotransformation .....	175
D. Biotransformation of Diuretics .....	177
I. Carboanhydrase Inhibitors .....	177
1. Acetazolamide .....	177
II. Loop Diuretics .....	177
1. Furosemide .....	177
2. Bumetanide .....	179
3. Piretanide .....	181
4. Azosemide .....	181
5. Etozolin .....	182
6. Torasemide .....	184
7. Ethacrynic Acid .....	185
III. Thiazide and Thiazide-Type Diuretics .....	187
1. Bendrofluazide .....	187
2. Chlorothiazide .....	187
3. Chlorthalidone .....	188
4. Hydrochlorothiazide .....	188
5. Hydroflumethiazide .....	188
6. Indapamide .....	189
7. Mefruside .....	190
8. Xipamide .....	191
IV. Potassium-Sparing Diuretics .....	191
1. Amiloride .....	191
2. Triamterene .....	192
3. Spironolactone and Potassium Canrenoate .....	193
References .....	196

## CHAPTER 6

**Interaction of Diuretics with Transport Systems  
in the Proximal Renal Tubule**

K.J. ULLRICH. With 2 Figures .....	201
A. Introduction .....	201
B. Transport System for Hydrophobic Organic Anions ( <i>para</i> -Aminohippurate) .....	202

C. Transport Systems for Organic Cations .....	204
D. Transport Systems for Sulfate .....	205
E. Transport Systems for Dicarboxylates .....	206
F. Interaction of Diuretics with the Different Proximal Transport Systems .....	206
I. Sulfonamide/Thiazide Derivatives .....	207
II. Thiazolidine, Aminopyrazol and Pyrazolidine Derivatives .....	212
III. Arylamine-Pyridinecarboxylate and Arylamine-Pyridine Sulfonylurea Derivatives .....	213
IV. Phenoxyacetic Acid Derivatives .....	213
V. Pyrazinoyl-Guanidine Derivatives, Pyrazinoyl-Aminomethylphenol Derivatives .....	214
VI. Pteridine Derivatives .....	214
VII. Aldosterone Antagonists .....	215
G. How Does Metabolic Transformation Change the Interaction with the Transport Systems for Organic Anions and Cations? .....	215
References .....	216

## CHAPTER 7

### Loop Diuretics

R. GREGER. With 23 Figures .....	221
A. Introduction .....	221
B. The Heterogeneous Group of Loop Diuretics .....	222
C. Organotropy of Loop Diuretics .....	223
D. Saluretic and Diuretic Effects of Loop Diuretics and Cellular Mechanisms .....	225
I. Luminal $K^+$ Conductance .....	228
II. Furosemide-Sensitive $Na^+2Cl^-K^+$ Cotransporter .....	230
III. Role of the Basolaterally Localized $(Na^+ + K^+)$ -ATPase .....	232
IV. Metabolic Control of NaCl Reabsorption in the TAL .....	234
V. $Cl^-$ Channel and Its Inhibition .....	236
VI. Loop Diuretics Related to Furosemide .....	238
VII. Loop Diuretics Not Related to Furosemide .....	241
E. Effects of Loop Diuretics in the Intact Kidney .....	241
I. Macula Densa Segment .....	244
II. Excretion of $K^+$ .....	246
III. Excretion of $NH_4^+$ .....	248
IV. Excretion of $H^+$ and $HCO_3^-$ .....	248
V. Excretion of $Ca^{2+}$ and $Mg^{2+}$ .....	249
VI. Excretion of $Li^+$ .....	249
VII. Excretion of Urate .....	250
VIII. Phosphaturic Effect .....	250

F. Effect of Loop Diuretics on Other Organs .....	251
I. Ototoxic Effects .....	251
II. Asthma .....	251
III. Preload to the Heart .....	252
IV. Glucose Metabolism .....	252
G. Pharmacokinetics .....	253
I. Ethacrynic Acid .....	253
II. Indacrinone .....	254
III. Furosemide .....	254
IV. Piretanide .....	254
V. Bumetanide .....	255
VI. Torasemide .....	255
VII. Azosemide .....	256
VIII. Etozolin and Muzolimine .....	256
H. Pharmacokinetics and Pharmacodynamics .....	257
I. Clinical Uses .....	260
I. Hypertension .....	260
II. Congestive Heart Failure and Lung Edema .....	261
III. Ascites .....	261
IV. Edematous States in Nephrotic Syndrome .....	262
V. Chronic Renal Failure .....	262
VI. Other Indications .....	263
J. Adverse Effects .....	264
I. Hypokalemia .....	264
II. Hyponatremia .....	264
III. Hypocalcemia .....	265
IV. Hypomagnesemia .....	265
V. Metabolic Alkalosis .....	265
VI. Hyperlipidemia .....	265
VII. Hyperglycemia and Diabetogenic Effects .....	266
VIII. Hyperuricemia .....	266
IX. Male Impotence .....	266
X. Ototoxicity .....	267
References .....	267

## CHAPTER 8

### Thiazide Diuretics

H. VELÁZQUEZ, H. KNAUF, and E. MUTSCHLER. With 13 Figures .....	275
A. Introduction .....	275
B. Chemical Structures .....	275
C. Pharmacokinetics .....	277
I. Protein Binding .....	279
II. Renal Excretion .....	279

D. Pharmacodynamics .....	280
I. Thiazide-Sensitive Systems .....	280
1. $\text{Na}^+\text{Cl}^-$ Cotransport .....	280
2. $\text{Cl}^-/\text{HCO}_3^-$ Exchange .....	283
3. Other Mechanisms .....	284
II. Thiazide Binding to Transporter Proteins .....	285
III. Cloning the Thiazide Diuretic Receptor .....	287
IV. Renal Actions .....	287
1. Proximal Effects .....	288
2. Distal Effects .....	289
3. Effects on Renal Salt and Water Excretion .....	298
4. Effects on Renal $\text{K}^+$ Excretion .....	300
5. Effects on Renal $\text{Ca}^{2+}$ Excretion .....	301
E. Pharmacokinetics in Disease States .....	301
I. Chronic Renal Failure .....	302
II. Liver Disease .....	304
F. Saluretic Effects of Thiazides .....	307
I. Effects in Healthy Controls .....	307
II. Responses in Renal Failure .....	309
III. Coadministration with Loop Diuretics in Renal Failure .....	309
IV. Coadministration with Other Diuretics in Edematous States with Normal Kidney Function .....	313
G. Diuretics in Nonedematous States .....	314
I. Hypertension .....	314
II. Diabetes Insipidus .....	317
III. Nephrolithiasis .....	318
H. Side Effects of Diuretic Therapy .....	318
I. Hypokalemia .....	318
II. $\text{Mg}^{2+}$ Depletion .....	318
III. Hyponatremia .....	319
IV. Hyperuricemia .....	319
V. Hyperglycemia .....	319
VI. Hyperlipidemia .....	319
VII. Allergy .....	320
VIII. Erectile Dysfunction .....	320
I. Drug Combinations .....	320
References .....	321

## CHAPTER 9

### Potassium-Retaining Diuretics: Aldosterone Antagonists

H. ENDOU and M. HOSOYAMADA. With 4 Figures .....	335
A. Chemical Structure and Properties, Structure-Activity Relationships of Aldosterone Antagonists .....	335

I. Introduction .....	335
II. Chemical Structure and Properties .....	337
1. Modifications of 17 $\alpha$ Side Chain: SC compounds .....	337
2. Structural Modification of Ring B: RU26752 and RU28318 .....	339
3. Structural Modification of Ring C: Mespironone (ZK94679) and ZK91587 .....	339
4. Recent Structural Modifications .....	339
III. Steroidogenesis Inhibitors and Secretion Inhibitors .....	339
B. Pharmacodynamics .....	340
I. Renal Effects .....	340
1. Increase in Urinary Sodium-Potassium Ratio .....	340
2. Target Nephron Segments: CCT and OMCT, and Other Segments .....	340
3. Intracellular Mechanism of Aldosterone Antagonists .....	341
II. Extrarenal Effects .....	342
1. Tissue Distribution of Type I Receptors .....	342
2. Cross-reactivity with the Glucocorticoid Receptors .....	342
3. Epithelia .....	342
4. Cardiovascular System .....	343
5. Central Nervous System .....	343
6. Steroidogenesis Inhibition .....	344
7. Antiandrogen Effects .....	344
C. Pharmacokinetics .....	345
I. Absorption .....	345
II. Plasma Concentrations .....	345
III. Metabolism .....	345
1. Spironolactone and Canrenoate .....	345
2. Spironolactone and Cytochrome P450 Destruction .....	347
IV. Excretion .....	347
D. Therapeutic Use (Indications, Dosage, Contraindications) .....	347
I. Indications .....	347
1. Congestive Heart Failure .....	348
2. Liver Cirrhosis .....	348
3. Nephrotic Syndrome .....	348
4. Hypertension .....	349
5. Endocrine Disorders .....	349
6. Other Disorders .....	349
II. Dosage .....	350
III. Contraindications .....	350
E. Side Effects and Toxicology .....	350
I. General Considerations .....	350
II. Main Side Effects .....	351
1. Hyponatremia, Hyperkalemia and Acid-Base Disturbances .....	351

2. Sexual Functions and Endocrine Disorders	351
3. Carcinogenicity	351
4. Allergy	352
5. Calcium Channel Antagonism	352
F. Drug Interactions	352
I. Angiotensin-Converting Enzyme Inhibitors	352
II. Ammonium Chloride	352
III. Aspirin	352
IV. Cyclosporin A	353
V. Digitoxin	353
VI. Digoxin	353
VII. Fludrocortisone	354
VIII. Mercurials	354
IX. Mitotane	354
X. Analgesics	355
XI. Warfarin	355
References	355

## CHAPTER 10

### Potassium-Retaining Diuretics: Amiloride

L.G. PALMER and T.R. KLEYMAN. With 7 Figures	363
A. Introduction	363
B. Structure-Function Relationships	364
I. Guanidinium Substitutions	365
II. 6-Position Ring Substitutions	366
III. 5-Position Ring Substitutions	367
C. Pharmacodynamics	367
I. Sites of Action: Na <sup>+</sup> Transport	367
1. General	367
2. Within the Kidney	369
3. Other Epithelia	371
II. Effects on Transport of K <sup>+</sup> and Other Ions	372
III. Effects on Other Cellular Processes	374
IV. Interactions with the Epithelial Na <sup>+</sup> Channels	375
1. Stoichiometry	375
2. Rate Constants	376
3. Competition with Na <sup>+</sup>	378
4. Feedback Response to Amiloride	380
5. Divalent Cation Requirements	380
6. Model for Amiloride Block	381
D. Pharmacokinetics	383
E. Therapeutic Use	385
F. Side Effects and Toxicity	387

G. Drug Interactions .....	388
References .....	388

## CHAPTER 11

**Potassium-Retaining Diuretics: Triamterene**

T. NETZER, F. ULLRICH, H. KNAUF, and E. MUTSCHLER.

With 13 Figures .....	395
A. Chemical Structure and Properties .....	395
B. Pharmacodynamics .....	395
I. Renal Effects .....	395
1. Structure-Activity Relationships of Pteridine Derivatives .....	395
2. Triamterene .....	402
II. Cardiac Effects .....	405
1. Structure-Activity Relationships .....	405
2. Triamterene .....	408
III. Effects on Dihydrofolate Reductase .....	409
C. Pharmacokinetics .....	409
I. Metabolism in Man .....	409
II. Pharmacokinetics in Healthy Volunteers .....	409
III. Pharmacokinetics in Patients with Liver Disease .....	411
IV. Pharmacokinetics in Patients with Renal Disease .....	412
V. Pharmacokinetics in the Elderly .....	413
D. Therapeutic Use .....	414
I. Indications .....	414
II. Dosage .....	415
III. Side Effects .....	415
IV. Contraindications .....	416
V. Drug Interactions .....	416
E. Toxicity .....	417
References .....	417

## CHAPTER 12

**Osmotic Diuretics: Mannitol**

O.S. BETTER, I. RUBINSTEIN, and J. WINAVER. With 3 Figures .....	423
A. Introduction .....	423
B. Renal Effects .....	424
I. Renal Hemodynamic Actions .....	425
II. Glomerular Filtration Rate .....	426
III. Tubular Salt and Water Reabsorption .....	428
1. Proximal Nephron .....	429

2. Loop of Henle .....	429
3. Distal Tubule and Collecting Duct .....	431
IV. Transport of Other Ions .....	431
V. Urinary Concentration and Dilution .....	432
VI. Miscellaneous Effects .....	433
C. Beneficial Extrarenal Effects of Hypertonic Mannitol .....	434
D. Effects on the Cardiovascular System .....	436
E. Clinical Use .....	437
I. Clinical Applications .....	437
II. Pharmacokinetics .....	437
III. Dosage .....	438
IV. Precautions .....	438
V. Adverse Reactions .....	438
VI. Contraindications .....	438
References .....	439

## CHAPTER 13

### Clinical Uses of Diuretics

J.B. PUSCHETT. With 13 Figures .....	443
A. Introduction .....	443
B. Physiological Basis of Diuretic Action and Clinical Implications of Physiological Principles .....	443
I. Proximal Tubule .....	447
II. Loop of Henle .....	451
III. Early Portion of the Distal Convolute Tubule .....	452
IV. Late Portion of the Distal Convolute Tubule and the Collecting Duct .....	453
C. Diuretics in the Treatment of Edematous States and Disorders Associated with Abnormalities of Renal Function .....	455
I. General Principles .....	455
II. Congestive Heart Failure .....	457
III. Nephrotic Syndrome .....	467
IV. Liver Disease .....	470
V. Idiopathic Edema .....	471
VI. Premenstrual Syndrome .....	472
VII. Acute Glomerulonephritis .....	473
VIII. Acute Renal Failure .....	473
IX. Chronic Renal Failure .....	474
X. Resistant Edema .....	475
D. Diuretics in the Treatment of Nonedematous Disorders .....	479
I. Hypertension .....	479
II. Toxemia of Pregnancy .....	485
III. Hypercalcemia .....	486

- IV. Renal Stone Disease ..... 487
- V. Diabetes Insipidus ..... 487
- VI. Hyperkalemia ..... 488
- E. Diuretic Side Effects and Adverse Reactions ..... 489
  - I. Volume Contraction ..... 489
  - II. Hyponatremia ..... 489
  - III. Hypokalemia ..... 490
  - IV. Hypomagnesemia ..... 491
  - V. Acid-Base Disorders ..... 491
    - 1. Metabolic Alkalosis ..... 491
    - 2. Metabolic Acidosis ..... 492
  - VI. Hyperglycemia ..... 492
  - VII. Hyperlipidemia ..... 494
  - VIII. Hyperuricemia ..... 494
  - IX. Ototoxicity ..... 495
  - X. Nephrotoxicity ..... 495
  - XI. Hyperkalemia ..... 495
- References ..... 496

- Subject Index ..... 507**
